

# Second Symposium & Workshop on ICAO-Standard MRTDs, Biometrics and Security

## Face Biometric Capture & Applications

Terry Hartmann

Director and Global Solution Lead

Secure Identification & Biometrics

UNISYS

International Organization for Standardization (ISO)

MRTD Symposium  
ICAO Headquarters, Montreal  
6-8 September 2006

# Identity Concepts – Who are you ?

## 1. Something You Have

- Driver license, passport, token (PKI), Smartcard ...

## 2. Something You Know

- PIN, Password, family name, date of birth, word/phrase

## 3. Something You are Still Entitled to

- Passport not lost, citizenship not revoked

## 4. Something You Are (**Biometrics**)

- Physical Characteristics
- Behavioral Characteristics

What are Biometrics ?

# Biometric – What is it?

Biometrics is the automated technique of measuring a physical characteristic or personal trait and comparing it to information in a database or on a token for the purposes of positive identification

# Types of Biometric

- ✱ DNA
- ✱ Retina Scan
- ✱ Iris Recognition
- ✱ Voice
- ✱ Hand Geometry
- ✱ Skin texture
- ✱ Vein Patterns
- ✱ Fingerprint – 100 years
- ✱ Face Recognition – since forever

Finger & Iris are  
optional  
supporting  
biometrics

# Identity Theft

(cautionary  
folklore)

# A folk Tale: Little Red Riding Hood

What is Facial Recognition ?

# Facial Recognition

# The face recognition process

- ☀ User enrollment

- ☀ Image capture

- ☀ Image processing

  - Image storage

- ☀ Feature extraction – Template

  - Template storage

- ☀ Comparison  $1)^{*}\%^{\wedge}\$_{\#}^{*}$  vs  $1)^{*}\%^{\wedge}S_{\#}^{*}$

- ☀ Confidence Score eg 9.2 out of 10

# Compare

- ✱ The photo image extracted from the chip in the passport

- ✱ The person standing in front of you at the airport

# How do you use it ?

# Identification Matching 1:many (database)

“Have we seen this person before  
under another identity ?”

# Verification Matching 1:1

**“Is this person who he/she claims to be?”**

# Watch List Matching

**“Is this person on a list of wanted people ?”**

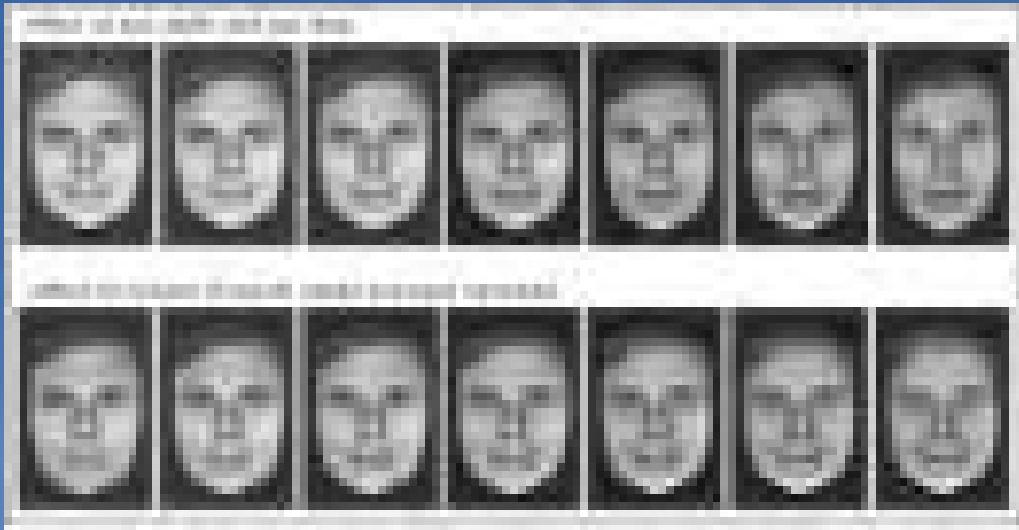

# Method - Eigenface

- The eigenface technique uses a combination of linear algebra and statistical analysis to generate a set of basis faces--the eigenfaces--against which inputs are tested
- a set of "standardized face ingredients" is derived from statistical analysis of many pictures of faces
- any human face can be considered to be a combination of these standard faces. One person's face might be made up of 10% from face 1, 20% from face 2 and so on
- the eigenface method can be thought of as reducing a face to a number. First it averages out a database of head shots to produce one composite face. Then it compares the face being identified to the composite. An algorithm measures how much the target face differs from the composite and generates a personal (template) number based on the deviation

# How does Facial Recognition Work ?

# Eigenfaces

A bland androgynous  
human face

# Local Feature Analysis

## Method – Local Feature Analysis

- Analyzes the pixels that make up the face image
- Compare the darkness of each pixel to that of its neighbours, looking for areas where abrupt differences in value radiate outward from a single pixel.
- These changes can occur between the eyebrows and skin, the eyes and eyelids, or on features that protrude, such as the cheekbones and nose.
- The system plots the location of each pixel, known as an "anchor point," then connects the dots, forming a mesh of triangles based on bone structure so makeup, glasses won't fool it.

# Considerations at Issuance

☀ The photo image provided

## Fraud Detection

☀ Your existing Database

# The Importance of Quality Capture of Face Garbage in = Garbage out

Why enrolment is so important !

# Fit for Purpose – eg a Drivers Licence

**NAPOMENA:**

# Enrolment - Photograph Guidelines

blurred

too close

## Style and lighting

The photographs must:

- be colour neutral
- be close up of your head and top of your shoulders

washed out colour

pixelated

too dark

head tilted to the side

eyes closed

the guidance notes), the countersignatory must certify the back of **one** (not both) of the photographs with the hand written words, "I certify that this is a true likeness of (give your full name and title)" and sign and date the endorsement.

## The photographs must be:

- identical;
- recent (taken within the last month);
- 45 millimetres (mm) x 35 millimetres (mm);
- printed on plain white photo quality paper (not watermarked or embossed);
- a close-up of your head and shoulders so that your face covers approximately 65 to 75% of the photograph;
