

A photograph of a runway at night, illuminated by a series of lights. The lights are arranged in a central line and along the edges of the runway, creating a perspective that leads the eye towards the horizon. The sky is dark, and the ground is a mix of green grass and dark pavement.

***The application of
LED's in runway
lighting systems***

Introduction

- Airfield Ground Lighting is a tough environment in which shocks, vibrations and great changes in temperature (frost or intense heat from the sun and surrounding tarmac).
- Currently the main provision for AGL is still in the form of incandescent lamps using a filament.
- These suffer from a number of weaknesses, in particular a relatively short average life as filaments are burnt out after 1 000 to 2 000 hours.
- Other weakness of incandescent lights is their "poor spectral emission"

LED Light Source

BENEFITS

- Service Life extended from 1 to 7 years!
- Reduced Power Consumption
- Low maintenance
- Lower Voltages to improve safety
- No Filters- LED's create the required colour!
- Better Colour – narrow spectrum
- Low temperature operation
- Resistance to Vibration – Robust

Advantages of LED

Taxiway Edge

Elevated Fittings

Low Candela
Output

Inset Fittings

The Clear Approach to Airports

Taxiway Guidance Signs

The Clear Approach to Airports

Taxiway Centreline and Stop Bars

Higher Light Output

Wide Angle Coverage

Runway Applications

High
Intensity

Inset

Elevated

LED High Intensity RGL

ICAO compliant High Intensity > 3.000 cd

Service Life without lamp change > 5 years

New LED Developments

Medium Intensity LED Lighting System

Portable LED Lighting System

Low Profile High Intensity Runway Airfield Lighting

The Clear Approach to Airports

PEARL
LED SYSTEM

PEARL
LED SYSTEM

Airfield lighting system
using LED lights

Targeting :

- General Aviation airports
- Private Airfields
- Jungle strips
- Military Forward Support Bases

For Operations in
Visual
Meteorological
Conditions.

The Clear Approach to Airports

PEARL
LED SYSTEM

Features

Easy to install.

- Plug & Play
- No specialized skills required
- Limited civil works

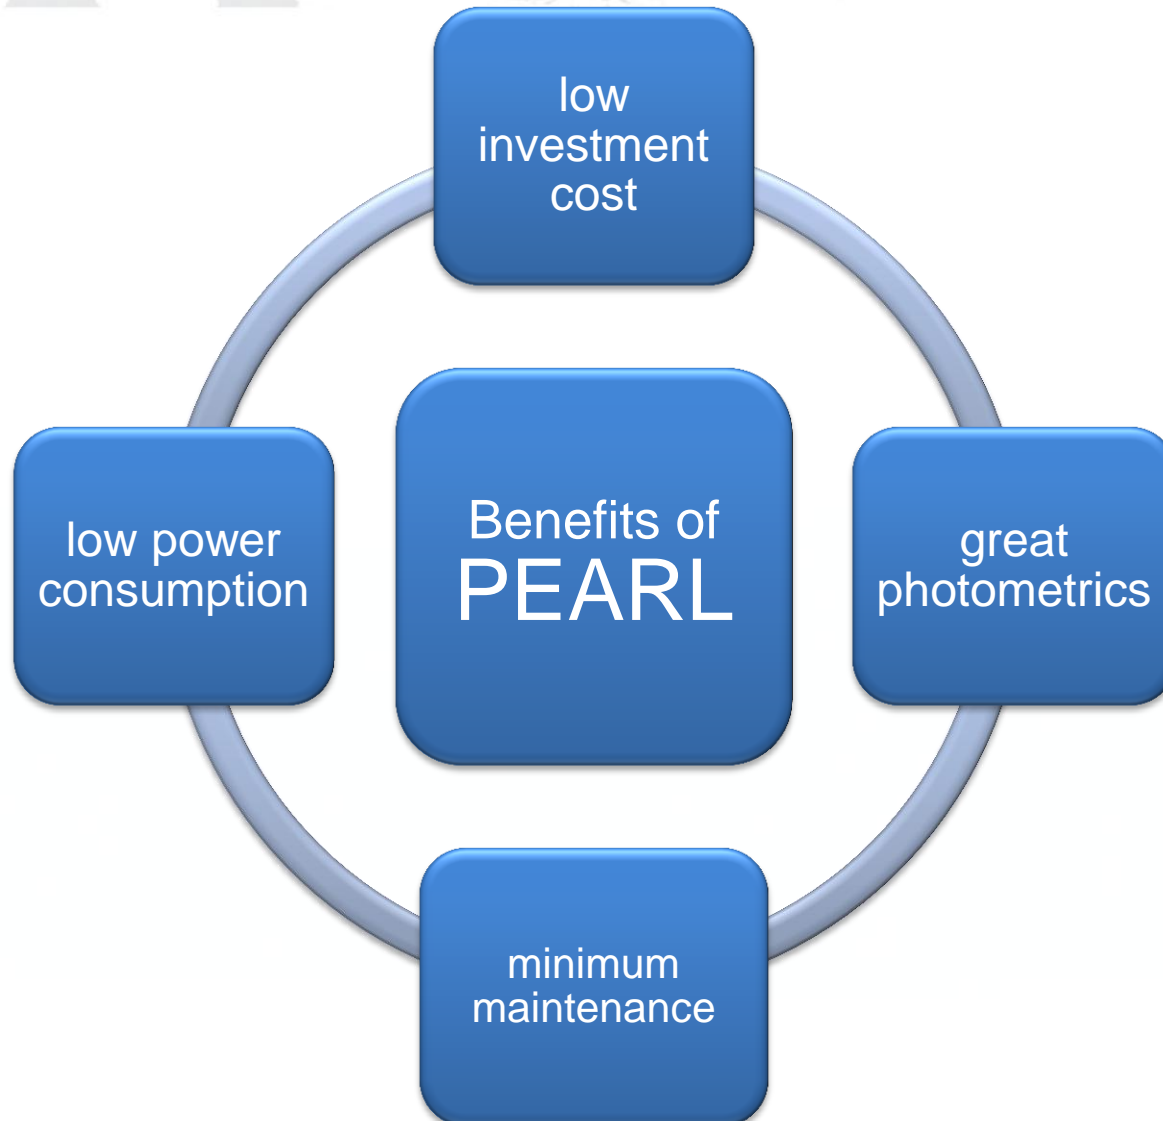

One or Two
circuit DCR
Regulator

1,4 Amp DC
Power Supply

3 Step Light
Dimming &
Remote
Control Option

PEARL
LED SYSTEM

DCR

- 1.4 A DC Power Supply – One or Two 500 W outputs
- Low output voltage below 400 Volts
- Brightness control in 3 steps
- Open Circuit Protection
- Over Current Protection
- Input Power 120/220 VAC 50/60 Hz
- EMI compatible
- Efficiency at full load higher than 90%
- Air Cooled
- Local/Remote selection switch
- LCD display for display of status information
- Optional Remote control by Radio Control L-854 or multi-wire

Summary

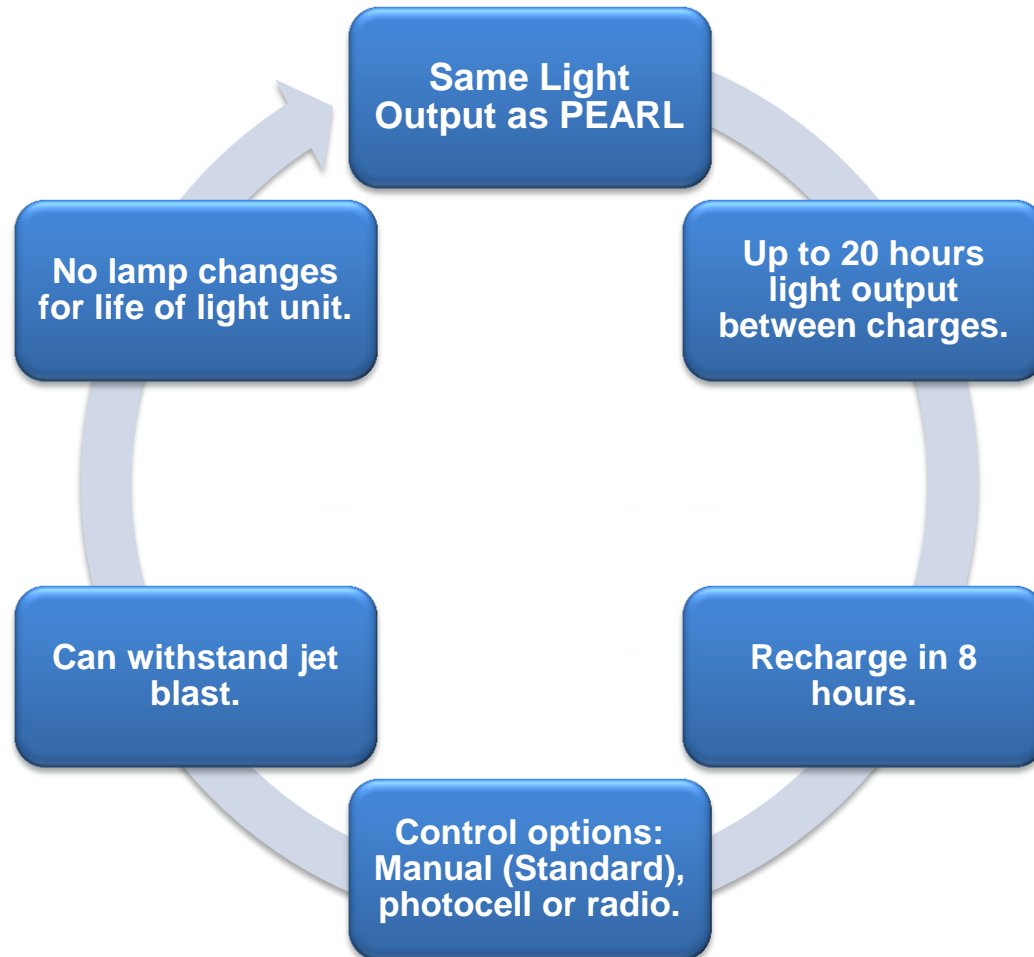

The Clear Approach to Airports

Portable Airfield Lighting System

Features

Applications

The POLARIS is available in any aeronautical colours for different applications:

- Runway Edge (White)
- Taxiway Edge (Blue)
- Approach (White)
- Runway End (Red)
- Threshold (Green)
- Temporary Taxiway Closure or Obstruction Lighting (Red)
- TLOF Heliport Light (Green)
- FATO Heliport Light (White)

at the future

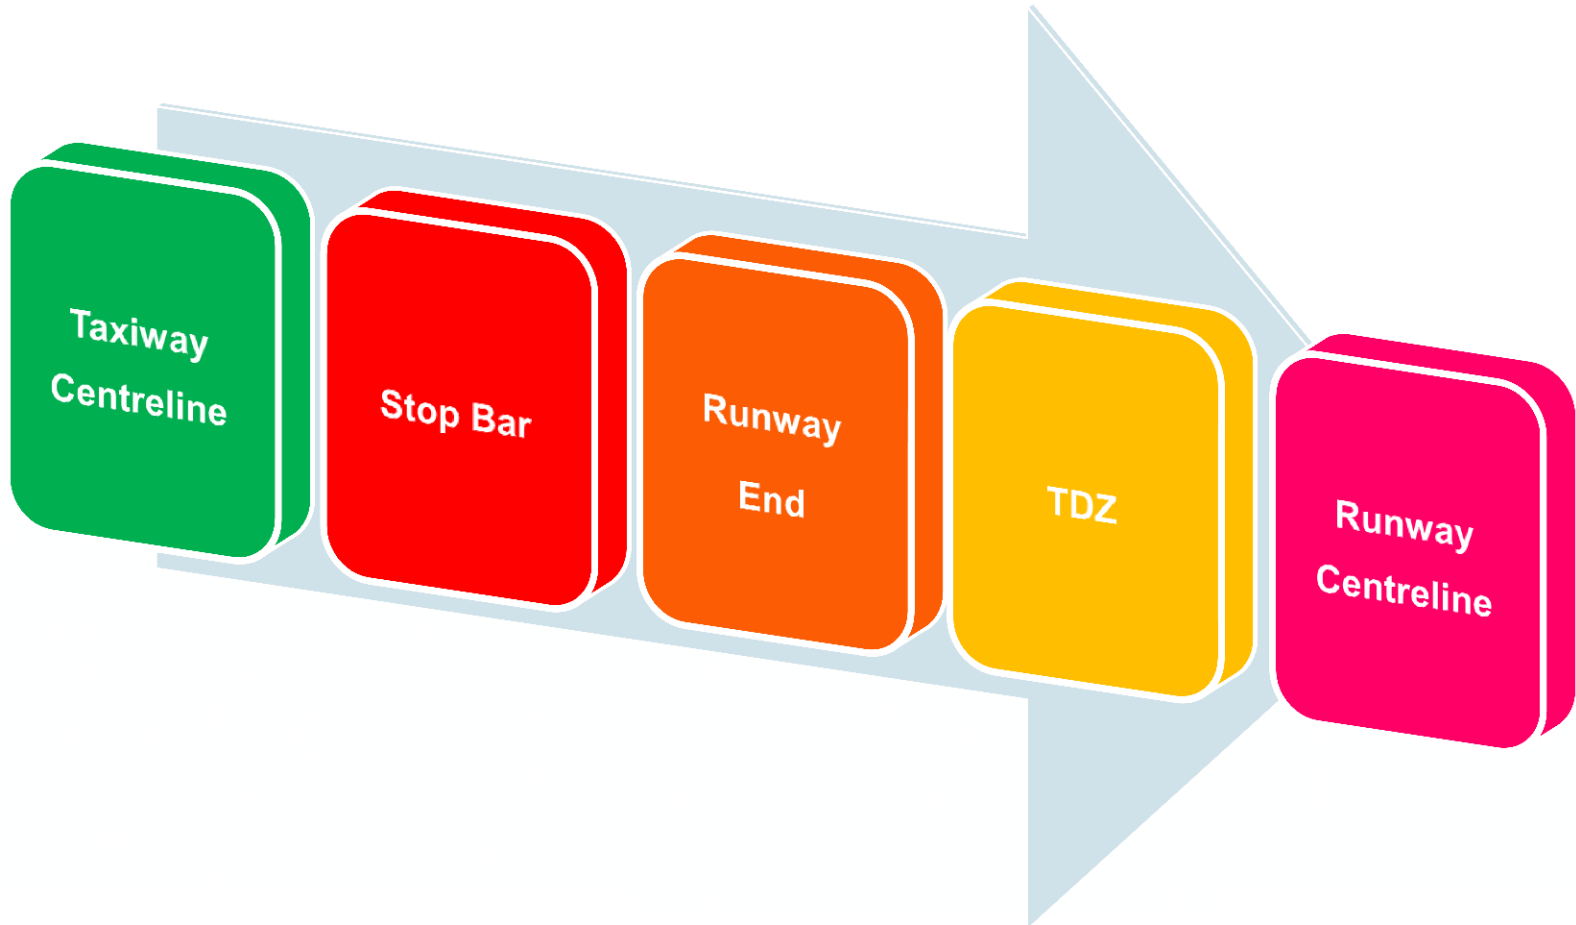

Iris – LED Centre Line Fitting

The Clear Approach to Airports

the clear approach to airports

The Clear Approach to Airports

Eco friendly design

Total airfield uniformity

< 6 mm profile with no negative slope

Optimised power consumption maximises life span of the fitting

Active monitoring of actual light output to maintain a selected brilliancy

IRIS – Features

All this with no negative slope!

Less than 6mm above grade

The Clear Approach to Airports

Iris – Optical cartridge

Clear / Clear

Clear / Blank

IRIS – Features

Self contained electronics package

Monitor - Presents an open circuit on the AGL power input when the light output falls to 50% or when more than 25% of the LEDs have failed

Manufactured with 80% recycled material

RoHS compliant

The Clear Approach to Airports

D.L.O

Dynamic Light Output

DLO - Features

- Removes any LED binning issues with supplier
- Protects the ability to supply spares in the future
- Manage temperature changes effect on the operation of LED
- Manages LED's degradation over time
- Monitored photometric performance
- Even illumination across the airfield
- Greater energy efficiency

DLO - Features

- Uses efficient state-of-the-art microprocessor-based switched-mode power supply technology which results in efficient conversion of input power to light output.
- Active power factor correction (>0.95) is employed so that the ground transformer secondary load is effectively purely resistive
- Figure shows the relationship of the A.C. supply voltage (yellow trace) and current (blue trace)
- Open-circuit functionality is incorporated so that fittings work with existing PLC systems

Looking Inside:

Optical light engine

LED array

Internal electronics

Heat sink

Optical light engine assembly

IRIS – Power Consumption

Runway
Centreline

- 15 Watts

Taxiway
Centreline

- 5 Watts

Stopbar

- 3 Watts

Future Road Map

- **Switch**
 - Integrated ‘switch facility’. Available in Fail ON and Fail OFF configurations
- **SMARTswitch**
 - Integrated SMARTswitch / monitor with true light output feedback and advanced condition monitoring for Total Preventative Maintenance (TPM)
- **Arctic heater kit**
 - For operation in harsh environments. Prevents ice formation on the lenses
- **Asset Tag**
 - Integrated RFID tag for asset tagging

The Micro 200

- ✓ High Power Factor
- ✓ Low Harmonics
- ✓ Low running costs
- ✓ Small Foot print
- ✓ Fast response time
- ✓ LED Technology
- ✓ EN61822 Compliant
- ✓ Optional extras

Theory of Operation

- ✓ About 1 μ S Reaction time to load changes
- ✓ Continuous power to electronic loads
- ✓ Lower Harmonic output
