UNITED NATIONS FRAMEWORK CONVENTION ON CLIMATE CHANGE (UNFCCC)

The Thirty-seventh Session of the UNFCCC Subsidiary Body for Scientific and Technological Advice (SBSTA37)
(26 November to 1 December 2012 – Doha, Qatar)

Agenda Item 11 (d)
Emissions from fuel used for international aviation and maritime transport

(Submission by the International Civil Aviation Organization (ICAO))

This submission describes ICAO’s main developments achieved in the field of international aviation and climate change, in particular four key areas: 1) States’ action plans and assistance to States, 2) sustainable alternative fuels for aviation, 3) market-based measures, and 4) global aspirational goals. ICAO’s positions and perspectives on the work related to long-term climate finance are also presented.

1. INTRODUCTION

1.1 Aviation plays a key role in society and is a driver of economic activity. In 2011, 2.8 billion passengers were transported safely by air and this figure is forecasted to grow to 5 billion by 2030. In addition, 5.3 trillion USD worth of cargo – approximately 35 per cent of world trade by value is carried annually by air. Air transport supports 3.5 per cent of the global GDP, including the employment of more than 56 million people worldwide.

1.2 Through the increased use of low-carbon technology, environmentally friendly materials, new aircraft systems and sustainable energy sources, the air transport sector is also making significant advances across the environmental pillar of sustainable development. Aircraft today are at least 70 per cent more fuel efficient than they were some 40 years ago.

1.3 Aviation’s current contribution (domestic and international) to climate change is estimated to be approximately 2 per cent of global anthropogenic CO₂ emissions¹, of which 60 per cent is from international aviation. Nevertheless, the growth in air traffic is outstripping the enormous progress achieved in reducing emissions and ICAO has taken the lead in further addressing international aviation’s contribution to climate change.

1.4 The Resolution A37-19² adopted by ICAO’s 37th Assembly in 2010 was an important step towards a sustainable air transport future and made international aviation the first sector with global aspirational goals of improving annual fuel efficiency by 2 per cent and stabilizing its global CO₂ emissions at 2020 levels.

¹ According to the IPCC 4th Assessment Report
² The full text of the Resolution A37-19 is included in the Appendix.
2. **RECENT PROGRESS AND NEXT STEPS**

2.1 ICAO and its Member States have been engaged in various initiatives and made important progress in the field of international aviation and climate change, focusing on four key areas: 1) States’ action plans and assistance to States, 2) sustainable alternative fuels for aviation, 3) market-based measures, and 4) global aspirational goals, in order to move international aviation closer to a sustainable future.

**States’ Action Plans**

2.2 The agreement by the 37th ICAO Assembly on the voluntary submission of Member States’ action plans on CO\(_2\) emissions reduction activities for international aviation to ICAO has led to a dynamic shift in the Organization’s policy outlook on the environment from a “Standards and policies setting” phase to a more action-oriented “implementation” mode. The action plans allow States to identify their basket of mitigation measures and assistance needs to implement such measures. In turn, the compilation of information contained in the States’ action plans enables ICAO to assess the progress toward achieving the global aspirational goals, as well as identify the areas of implementation support and assistance needed towards the provision of such assistance to States.

2.3 To assist States in the development of their action plans, ICAO developed guidance material and an interactive web-interface, as well as conducted seven hands-on training workshops. The ICAO Secretariat also continued to support States by making contact with individual States and providing specific tools and information related to the guidance material and interactive website.

2.4 By 5 November 2012, 53 member States representing 75 per cent of the global international air traffic have developed and submitted their action plans to ICAO. Additional action plans are expected to be submitted by the end of 2012, which will bring the total percentage of global international air traffic represented to 85 per cent. The ICAO Secretariat is also exploring the possibility with some groups of States on the development of a joint action plan by a group of States.

**Assistance to States**

2.5 ICAO is currently working on the compilation and analysis of information contained in the States’ action plans received thus far. In this regard, the ICAO “Assistance for Action – Aviation and Climate Change” Seminar\(^3\), held from 23 to 24 October 2012 in Montréal, Canada provided an opportunity for States and other stakeholders to exchange information and views on the assistance required to develop and implement action plans.

2.6 The Seminar highlighted the milestones achieved during the first phase of initiatives related to States’ action plans. It showcased the synergies and active engagement between ICAO, its member States, other international organizations and stakeholders, toward the development and the implementation of action plans. During the financing session, eight speakers from six different international organizations\(^4\) discussed real opportunities to build partnerships to support assistance and financing requests identified by States in their action plans.

2.7 While the first phase of initiatives related to States’ action plans was successful, ICAO has now entered the second phase, in an effort to build a robust, overarching strategy to support States that newly develop their action plans; States that need their action plans to be reviewed by ICAO; and States that need assistance in implementing the actions identified in their plans.

---

\(^3\) More information on the ICAO seminar is available at: [http://www.icao.int/meetings/acli/](http://www.icao.int/meetings/acli/)

\(^4\) World Bank, the United Nations Development Programme, Global Environment Facility, Asian Development Bank, African Development Bank and Inter-American Development Bank
Sustainable Alternative Fuels for Aviation

2.8 Sustainable alternative fuels for aviation offer one of the most exciting and promising opportunities for reducing the aviation sector’s greenhouse gas (GHG) emissions, and ICAO has been providing a forum for the exchange of information on the state of worldwide activities in this area. Today, the use of drop-in biofuels in aviation has become a reality as they do not require changes to aircraft or fuel delivery infrastructure, and airlines are already using such fuels in commercial flights.

2.9 At the United Nations Conference on Sustainable Development (UNCSD, also known as the Rio+20 Conference) held in June 2012, ICAO demonstrated, in close cooperation with the industry partners, this global reality of sustainable alternative fuels for aviation through a series of four connecting flights from Montréal to Rio de Janeiro, which were all powered by sustainable alternative fuels. An ICAO report that summarizes this initiative: “Flightpath to a Sustainable Future”, is available on the ICAO public website (www.icao.int/env).

2.10 Technological aspects have proven to be viable. The next challenge is to enable the availability of sustainable alternative fuels in a timely and commercially viable manner and in sufficient quantities for use in aviation. In June 2012, an ICAO expert group started its work to develop a set of policy recommendations to promote and further facilitate the development and deployment of such fuels for aviation. Building upon the existing policies and measures, and current initiatives and best practices undertaken by States and organizations, the expert group will develop its deliverables under four key themes, namely: 1) policies; 2) development and deployment; 3) sustainability criteria and emissions accounting; and 4) financing. The policy recommendations to be developed by the expert group will be considered by the ICAO Council in early 2013.

Market-based Measures (MBMs)

2.11 The 37th ICAO Assembly agreed on the development of a framework for MBMs, including the elaboration of the guiding principles adopted by the Assembly, and decided to explore a global MBM scheme for international aviation.

2.12 ICAO has been undertaking intensive work to develop a global solution on this subject, in cooperation with experts nominated by Member States and international organizations. In March 2012, the ICAO Council agreed to concentrate on four options for a global MBM scheme, and the evaluation criteria to assess these options were built upon the guiding principles. The following Session of the ICAO Council in June 2012 agreed to suspend further consideration of one option, and requested further evaluation of the remaining three options. It was also agreed that further progress would be made on the development of the framework for MBMs.

2.13 Further updates on the progress of work relating to MBMs at the next Session of the ICAO Council in November 2012 will be provided in due course.

Global Aspirational Goals

2.14 ICAO’s Committee on Aviation Environmental Protection (CAEP) has continued its work on the CO₂ trends assessment by estimating the contribution of various categories of mitigation measures (aircraft-related technology development; improved air traffic management and infrastructure use; more efficient operations; and alternative fuels) in order to measure current and estimate future progress toward the achievement of global aspirational goals.

2.15 Work to estimate and verify the current global fuel consumption from international aviation directly supports the request of the 37th ICAO Assembly to regularly report CO₂ emissions from international aviation to UNFCCC. The methodologies used for and the results of estimating fuel consumption will be reviewed by CAEP.

2.16 In support of measuring future progress toward the achievement of global aspirational goals, the Secretariat has been compiling and interpreting the data contained in States’ action plans to
determine a global figure, which will be integrated with the CO$_2$ trends assessment being prepared by CAEP for the period of 2010 to 2050. The assessment will be finalized by CAEP in early 2013, and will support the review by the Council of the medium-term global aspirational goal and the exploration of a long-term global aspirational goal for international aviation.

**CO$_2$ Certification Standard for Aircraft**

2.17 Another major area of activity in the field of international aviation and climate change is the development of a technical CO$_2$ certification Standard for aircraft, which is one of the most challenging tasks in the CAEP work programme. Significant efforts were directed for the agreement of a CO$_2$ metric system at the CAEP Steering Group meeting in July 2012. This agreement allows CAEP to move to the next stages, including the definition of certification procedures and the Standard’s scope of applicability, to be followed by the analysis of an appropriate regulatory limit for the Standard.

### 3. **LONG-TERM CLIMATE CHANGE FINANCE**

3.1 The Durban Conference recalled that developed country Parties to the UNFCCC committed to a goal of mobilizing USD 100 billion per year by 2020 to address the needs of developing countries. While the Durban Conference did not agree on the specific sources of such revenue, it decided to analyze options from a wide variety of sources, drawing upon relevant reports, including the report of the High-level Advisory Group on Climate Financing (AGF) and that of the World Bank (WB)/International Monetary Fund (IMF) under the G20 process. The WB/IMF report explored global carbon charges of USD 25 per tonne of CO$_2$ on international transport, which it suggests could raise USD 12 billion per year by 2020 from international aviation.

3.2 It should be highlighted that the global aspirational goals for the international aviation sector, adopted by the 37th ICAO Assembly, will require adequate financial resources within the sector itself, enabling it to effectively respond to the global climate change challenge. It is of utmost importance that the design and implementation of market-based measures for international aviation be treated as one element of a basket of mitigation measures to achieve the global aspirational goals, as part of a global solution for the sustainable future of international aviation, and not in isolation.

3.3 In addition, discussions on climate change need to strike a good balance among the three pillars of social, economic and environmental sustainability which, once applied to the international aviation sector, will allow this sector to grow in an environmentally sustainable manner and at the same time, will continue to ensure the connectivity and access to mobility and to facilitate the exchange of cultural and educational experiences.

### 4. **CONCLUSIONS**

4.1 ICAO has been working actively towards developing global solutions to address GHG emissions from international aviation. ICAO Assembly Resolution A37-19 is a clear demonstration of the willingness of ICAO and its Member States to take concrete steps relating to climate change towards the sustainable development of international aviation.

4.2 ICAO expects the UNFCCC process to deliver an agreement that acknowledges ICAO’s achievements as the specialized agency for international aviation in the area of climate change, and encourages its Member States to work further through ICAO.
APPENDIX

ICAO Assembly Resolution A37-19

Consolidated statement of continuing ICAO policies and practices related to environmental protection – climate change

Whereas ICAO and its member States recognize the critical importance of providing continuous leadership to international civil aviation in limiting or reducing its emissions that contribute to global climate change;

Reemphasizing the vital role which international aviation plays in global economic and social development and the need to ensure that international aviation continues to develop in a sustainable manner;

Whereas the ultimate objective of the United Nations Framework Convention on Climate Change (UNFCCC) is to achieve stabilization of greenhouse gas (GHG) concentrations in the atmosphere at a level that would prevent dangerous anthropogenic interference with the climate system;

Whereas the Kyoto Protocol, which was adopted by the Conference of the Parties to the UNFCCC in December 1997 and entered into force on 16 February 2005, calls for developed countries (Annex I Parties) to pursue limitation or reduction of greenhouse gases from “aviation bunker fuels” (international aviation) working through ICAO (Article 2.2);

Acknowledging that international aviation emissions, currently accounting for less than 2 per cent of total global CO₂ emissions, are projected to grow as a result of the continued development of the sector;

Whereas a comprehensive assessment of aviation’s impact on the atmosphere is contained in the special report on Aviation and the Global Atmosphere, published in 1999, which was prepared at ICAO’s request by the Intergovernmental Panel on Climate Change (IPCC) in collaboration with the Scientific Assessment Panel to the Montreal Protocol on Substances that Deplete the Ozone Layer;

Whereas the IPCC special report recognized that the effects of some types of aircraft emissions are well understood, it revealed that the effects of others are not, and identified a number of key areas of scientific uncertainty that limit the ability to project aviation’s full impacts on climate and ozone;

Whereas ICAO requested that the IPCC include an update of the main findings of the special report in its Fourth Assessment Report, published in 2007 and its Fifth Assessment Report to be published in 2014;

Noting the scientific view that the increase in global average temperature above pre-industrial levels ought not to exceed 2°C;

Acknowledging the principles and provisions on common but differentiated responsibilities and respective capabilities, and with developed countries taking the lead under the UNFCCC and the Kyoto Protocol;

Also acknowledging the principles of non-discrimination and equal and fair opportunities to develop international aviation set forth in the Chicago Convention;
Recognizing that this Resolution does not set a precedent for or prejudge the outcome of negotiations under the UNFCCC and its Kyoto Protocol nor represent the position of the Parties to the UNFCCC and its Kyoto Protocol;

Noting that, consistent with Assembly Resolution A36-22, the High-level Meeting on International Aviation and Climate Change in October 2009 (HLM-ENV/09) endorsed the Programme of Action on International Aviation and Climate Change which included global aspirational goals in the form of fuel efficiency, a basket of measures and the means to measure progress;

Recognizing that the aspirational goal of 2 per cent annual fuel efficiency improvement is unlikely to deliver the level of reduction necessary to stabilize and then reduce aviation’s absolute emissions contribution to climate change, and that goals of more ambition will need to be considered to deliver a sustainable path for aviation;

Noting that, to promote sustainable growth of aviation, a comprehensive approach, consisting of work on technology and standards, and on operational and market-based measures to reduce emissions is necessary;

Noting that the HLM-ENV/09 declared that ICAO would establish a process to develop a framework for market based measures in international aviation, taking into account the conclusions of the HLM-ENV/09 and outcome of the UNFCCC COP 15 and bearing in mind relevant ICAO Assembly resolutions and the appendices with a view to complete this process expeditiously;

Noting that the Conference on Aviation and Alternative Fuels in November 2009 (CAAF/09) endorsed the use of sustainable alternative fuels for aviation, particularly the use of drop-in fuels in the short to mid-term, as an important means of reducing aviation emissions;

Also noting that the CAAF/09 established an ICAO Global Framework for Aviation Alternative Fuels (GFAAF);

Recognizing the different circumstances among States in their capacity to respond to the challenges associated with climate change and the need to provide necessary support, in particular to developing countries and States having particular needs;

Affirming that specific measures to assist developing States as well as to facilitate access to financial support, technology transfer and capacity building should be initiated;

Whereas the Kyoto Protocol provides for different flexible instruments (such as the Clean Development Mechanism — CDM) which would benefit projects involving developing States;

Affirming that addressing GHG emissions from international aviation requires the active engagement and cooperation of States and the industry, and noting the collective commitments announced by Airports Council International (ACI), Civil Air Navigation Services Organisation (CANSO), International Air Transport Association (IATA), and International Coordinating Council of Aerospace Industries Associations (ICCAIA) on behalf of the international air transport industry to continuously improve CO₂ efficiency by an average of 1.5 per cent per annum from 2009 until 2020, to achieve carbon neutral growth from 2020 and reducing its carbon emissions by 50 per cent by 2050 compared to 2005 levels;

Recognizing the need to monitor and report the potential impacts of climate change on international aviation operations and related infrastructure;
Recognizing the progress made by ICAO in its implementation of the Climate Neutral UN initiative and the significant support provided by ICAO to the initiative, in particular through the development of a common methodology for calculating GHG emissions from air travel;

The Assembly:

1. Resolves that this Resolution, together with Resolution A37-18: Consolidated statement of continuing ICAO policies and practices related to environmental protection - General provisions, noise and local air quality, supersede Resolution A36-22 and constitute the consolidated statement of continuing ICAO policies and practices related to environmental protection;

2. Requests the Council to:
   a) ensure that ICAO exercise continuous leadership on environmental issues relating to international civil aviation, including GHG emissions;
   b) continue to study policy options to limit or reduce the environmental impact of aircraft engine emissions and to develop concrete proposals and provide advice as soon as possible to the Conference of the Parties of the UNFCCC, encompassing technical solutions and market-based measures, and taking into account potential implications of such measures for developing as well as developed countries; and
   c) continue to cooperate with organizations involved in policy-making in this field, notably with the Conference of the Parties to the UNFCCC;

3. Reiterates that:
   a) ICAO should continue to take initiatives to promote information on scientific understanding of aviation’s impact and action undertaken to address aviation emissions and continue to provide the forum to facilitate discussions on solutions to address aviation emissions; and
   b) emphasis should be on those policy options that will reduce aircraft engine emissions without negatively impacting the growth of air transport especially in developing economies;

4. Resolves that States and relevant organizations will work through ICAO to achieve a global annual average fuel efficiency improvement of 2 per cent until 2020 and an aspirational global fuel efficiency improvement rate of 2 per cent per annum from 2021 to 2050, calculated on the basis of volume of fuel used per revenue tonne kilometre performed;

5. Agrees that the goals mentioned in paragraph 4 above would not attribute specific obligations to individual States, and the different circumstances, respective capabilities and contribution of developing and developed States to the concentration of aviation GHG emissions in the atmosphere will determine how each State may voluntarily contribute to achieving the global aspirational goals;

6. Also resolves that, without any attribution of specific obligations to individual States, ICAO and its member States with relevant organizations will work together to strive to achieve a collective medium term global aspirational goal of keeping the global net carbon emissions from international aviation from 2020 at the same level, taking into account:
   a) the special circumstances and respective capabilities of developing countries;
b) that the different circumstances, respective capabilities and contribution of States to the concentration of aviation GHG emissions in the atmosphere will determine how each State may contribute to achieving the global aspirational goals;

c) that some States may take more ambitious actions prior to 2020, which may offset an increase in emissions from the growth of air transport in developing States;

d) the maturity of aviation markets;

e) the sustainable growth of the international aviation industry; and

f) that emissions may increase due to the expected growth in international air traffic until lower emitting technologies and fuels and other mitigating measures are developed and deployed;

7. Agrees to review, at its 38th Session, the goal mentioned in paragraph 6 above in light of progress towards the goal, new studies regarding the feasibility of achieving the goal, and relevant information from States;

8. Requests the Council to explore the feasibility of a long term global aspirational goal for international aviation, through conducting detailed studies assessing the attainability and impacts of any goals proposed, including the impact on growth as well as costs in all countries, especially developing countries, for the progress of the work to be presented to the 38th Session of the ICAO Assembly. Assessment of long term goals should include information from member States on their experiences working towards the medium term goal.

9. Encourages States to submit their action plans outlining their respective policies and actions, and annual reporting on international aviation CO₂ emissions to ICAO;

10. Invites those States that choose to prepare their action plans to submit them to ICAO as soon as possible preferably by the end of June 2012 in order that ICAO can compile the information in relation to achieving the global aspirational goals, and the action plans should include information on the basket of measures considered by States, reflecting their respective national capacities and circumstances, and information on any specific assistance needs;

11. Requests the Council to facilitate the dissemination of economic and technical studies and best practices related to aspirational goals and to provide guidance and other technical assistance for the preparation of States’ action plans prior to the end of June 2012, in order for States to conduct their necessary studies and to voluntarily submit their action plans to ICAO;

12. Resolves that a de minimis threshold of international aviation activity of 1 per cent of total revenue ton kilometres should apply to the submission of States’ action plans as follows:

   a) States below the threshold are not expected to submit action plans towards achieving the global goals; and

   b) States below the threshold but that otherwise have agreed to voluntarily contribute to achieving the global goals are expected to submit action plans;

13. Requests the Council, with the support of member States, to undertake work to develop a framework for market-based measures (MBMs) in international aviation, including further elaboration of the guiding principles listed in the Annex, for consideration by the 38th Session of the ICAO Assembly;
14. Urges States to respect the guiding principles listed in the Annex, when designing new and implementing existing MBMs for international aviation, and to engage in constructive bilateral and/or multilateral consultations and negotiations with other States to reach an agreement;

15. Resolves on a de minimis threshold of international aviation activity, consistent with the guiding principles in the Annex, of 1 per cent of total revenue ton kilometres to MBMs as follows:

a) commercial aircraft operators of States below the threshold should qualify for exemption for application of MBMs that are established on national, regional and global levels; and

b) States and regions implementing MBMs may wish to also consider an exemption for other small aircraft operators;

16. Requests the Council to review the de minimis threshold to MBMs in paragraph 15, taking into account specific circumstances of States and potential impacts on the aviation industry and markets, and with regard to the guiding principles listed in the Annex, by the end of 2011;

17. Urges States to review existing and planned MBMs for international aviation to ensure their consistency with the guiding principles listed in the Annex and the provisions in paragraphs 15 and 16 above;

18. Requests the Council, with the support of member States and international organizations, to continue to explore the feasibility of a global MBM scheme by undertaking further studies on the technical aspects, environmental benefits, economic impacts and the modalities of such a scheme, taking into account the outcome of the negotiations under the UNFCCC and other international developments, as appropriate, and report the progress for consideration by the 38th Session of the ICAO Assembly;

19. Recognizes that in the short term voluntary carbon offsetting schemes constitute a practical way to offset CO₂ emissions, and invites States to encourage their operators wishing to take early actions to use carbon offsetting, particularly through the use of credits generated from internationally recognized schemes such as the CDM;

20. Requests the Council to collect information on the volume of carbon offsets purchased in relation to air transport, and to continue to develop and disseminate best practices and tools, such as the ICAO Carbon Emissions Calculator, that will help harmonize the implementation of carbon offset programmes;

21. Requests the Council to regularly report CO₂ emissions from international aviation to the UNFCCC, as part of its contribution to assessing progress made in the implementation actions in the sector based on information approved by its member States;

22. Requests the Council to:

a) study, identify and develop processes and mechanisms to facilitate the provision of technical and financial assistance, as well as facilitate access to existing and new financial resources, technology transfer and capacity building, to developing countries and report on its progress, including processes and mechanisms developed, results achieved as well as further recommendations, preliminarily by the end of 2012 and at the 38th Session of the Assembly; and

b) initiate specific measures to assist developing States as well as to facilitate access to financial resources, technology transfer and capacity building;
23. Requests States to:

a) promote scientific research aimed at continuing to address the uncertainties identified in the IPCC special report on Aviation and the Global Atmosphere and in the Fourth Assessment report;

b) ensure that future international assessments of climate change undertaken by IPCC and other relevant United Nations bodies include updated information, if any, on aircraft-induced effects on the atmosphere;

c) accelerate investments on research and development to bring to market even more efficient technology by 2020;

d) accelerate the development and implementation of fuel efficient routings and procedures to reduce aviation emissions;

e) accelerate efforts to achieve environmental benefits through the application of satellite-based technologies that improve the efficiency of air navigation and work with ICAO to bring these benefits to all regions and States;

f) reduce legal, security, economic and other institutional barriers to enable implementation of the new ATM operating concepts for the environmentally efficient use of airspace;

g) develop policy actions to accelerate the appropriate development, deployment and use of sustainable alternative fuels for aviation;

h) work together through ICAO and other relevant international bodies, to exchange information and best practices; and

i) consider measures to support sustainable aviation alternative fuels research and development, investments in new feedstock cultivations and production facilities, as well as incentives to stimulate commercialisation and use of sustainable alternative fuels for aviation to accelerate the reduction of aviation CO$_2$ emissions;

24. Requests the Council to:

a) continue to develop and keep up-to-date the guidance for member States on the application of policies and measures aimed at reducing or limiting the environmental impact of emissions from aviation, and conduct further studies with respect to mitigating the impact of aviation on climate change;

b) encourage States to cooperate in the development of predictive analytical models for the assessment of aviation impacts;

c) continue evaluating the costs and benefits of the various measures, including existing measures, with the goal of addressing aircraft engine emissions in the most cost-effective manner, taking into account the interests of all parties concerned, including potential impacts on developing world;

d) provide the necessary guidance and direction to ICAO’s Regional Offices to assist member States with studies, evaluations and development of procedures, in collaboration with other States in the region, to limit or reduce GHG emissions on a global basis and work together collaboratively to
optimize the environmental benefits that can be achieved through their various programmes;

e) develop a global CO₂ Standard for aircraft aiming for 2013;

f) further elaborate on relevant fuel efficiency metrics, including for international business aviation, and develop medium and long term technological and operational goals for aircraft fuel burn;

g) encourage member States and invite industry to actively participate in further work on sustainable alternative fuels for aviation;

h) work with financial institutions to facilitate access to financing infrastructure development projects dedicated to sustainable aviation alternative fuels and incentives to overcome initial market hurdles;

i) continue to develop the necessary tools to assess the benefits associated with ATM improvements, and intensify its efforts on the development of new guidance on operational measures to reduce international aviation emissions;

j) implement an emphasis on increasing fuel efficiency in all aspects of the ICAO’s Global Air Navigation Plan, and encourage States and stakeholders to develop air traffic management that optimize environmental benefits and to promote and share best practices applied at airports in reducing the adverse effects of GHG emissions of civil aviation;

k) identify appropriate standard methodologies and a mechanism to measure/estimate, monitor and verify global GHG emissions from international aviation, and States support the work of ICAO on measuring progress through the reporting of annual data on traffic and fuel consumption;

l) request States to continue to support the efforts of ICAO on enhancing the reliability of measuring/estimating global GHG emissions from international aviation;

m) undertake a study on the possible application of CDM of the Kyoto Protocol to international aviation;

n) monitor and disseminate relevant information on the potential impacts of climate change on international aviation operations and related infrastructure, in cooperation with other relevant international organizations and the industry; and

o) continue to cooperate with the Climate Neutral UN initiative, remain at the forefront of developing methods and tools for quantifying aviation’s GHG emissions with respect to the initiative, and further develop and implement the strategy for reducing GHG emissions and enhancing in-house sustainability management practices of the Organization.
Annex

The guiding principles for the design and implementation of market-based measures (MBMs) for international aviation:

a) MBMs should support sustainable development of the international aviation sector;
b) MBMs should support the mitigation of GHG emissions from international aviation;
c) MBMs should contribute towards achieving global aspirational goals;
d) MBMs should be transparent and administratively simple;
e) MBMs should be cost-effective;
f) MBMs should not be duplicative and international aviation CO₂ emissions should be accounted for only once;
g) MBMs should minimize carbon leakage and market distortions;
h) MBMs should ensure the fair treatment of the international aviation sector in relation to other sectors;
i) MBMs should recognize past and future achievements and investments in aviation fuel efficiency and in other measures to reduce aviation emissions;
j) MBMs should not impose inappropriate economic burden on international aviation;
k) MBMs should facilitate appropriate access to all carbon markets;
l) MBMs should be assessed in relation to various measures on the basis of performance measured in terms of CO₂ emissions reductions or avoidance, where appropriate;
m) MBMs should include de minimis provisions;
n) where revenues are generated from MBMs, it is strongly recommended that they should be applied in the first instance to mitigating the environmental impact of aircraft engine emissions, including mitigation and adaptation, as well as assistance to and support for developing States; and

o) where emissions reductions are achieved through MBMs, they should be identified in States’ emissions reporting.

— END —
