WP3.1A1 – APPENDIX 1 - ASBU Elements in AOP

ASBU Modules	ASBU Elements	Purpose of elements	Elements Enablers	Applicability (Yes or No)	Rationale for applicability
B0 (ACDM)	B0/1 Airport CDM Information Sharing	To generate common situational awareness by sharing relevant surface operations data among the local stakeholders involved in aerodrome operations.	Surface operation milestones procedure ACIS system Phraseology	Yes	Ready for implementation Applicable to all States in the AFI region The element forms the first step for Airport Stakeholder collaboration in Aerodrome Operations. It generates situational awareness for effective decision making and does not need automation.
B1- (ACDM)	B1/1 Airport Operations Plan	To enhance the planning and management of airport operations and allow their full integration into the ATM network	Airport operations plan CDM information management processes	Yes (for specific States)	Ready for implementation To be implemented by States with airports of medium traffic density The element consists of a collaborative airport operations plan (AOP) which encompasses “local” airport information and shared information with the ATM network in order to develop a synchronized view for the integration of local airport operations.
	B1/2 Airport Operations Centre	To enable integration of all stakeholders, both landside and airside, into a coherent decision-making entity/process (and team), using the shared information and capabilities provided through the AOP.	Airport operation center (APOC) sharing system Operational facility APOC monitoring and decision support systems	Yes (for specific States)	Ready for implementation To be implemented by States with airports of medium traffic density Integrating all stakeholders, both landside and airside, into a coherent decision-making entity/process (and team), using the shared information and capabilities provided through the AOP. This will be achieved by bringing all stakeholders together in a physical facility, using the shared information and capabilities of the AOP

Applicability criteria: Aerodrome traffic density.

- a) *Light*. Where the number of movements in the mean busy hour is not greater than 15 per runway or typically less than 20 total aerodrome movements.
- b) *Medium*. Where the number of movements in the mean busy hour is of the order of 16 to 25 per runway or typically between 20 to 35 total aerodrome movements.
- c) *Heavy*. Where the number of movements in the
