

Paul Giesman
United States Federal Aviation Administration
Aerospace Engineer
Policy and Innovation

Paul worked for the Boeing Company from 1981 to 2014. He worked aircraft performance certification, flight operations engineering support for airplane performance, incident and accident investigation on landing overruns and for a number of years led Boeing's Flight Operations Engineering Airline Support function.

In 2014, Paul retired from Boeing and went to work in the United States FAA Transport Standards staff where he has been responsible for FAA transport airplane policy on airplane performance, stability and control and handling qualities.

Paul also served as Vice President and President of the Society of Aircraft Performance and Flight Operations Engineers (SAPOE).

Paul has supported aviation industry performance, operations and safety committees and initiatives on winter operations and runway safety from the FAA, Transport Canada, ICAO, Flight Safety Foundation, EASA, Eurocontrol and SAPOE.
