

Industry Restart

Giancarlo Buono

Regional Director Safety and Flight Operations, Europe

8th June 2020

Harmonization is key

- IATA welcomes and fully support ICAO COVID-19 Guidelines
- We urge governments to implement the recommendations quickly
- Global harmonization and mutual recognition of efforts is needed to earn the confidence of travelers and air transport workers
- Alignment of EASA/ECDC guidelines is paramount
- IATA will continuously update its “Biosafety for Air Transport: A Roadmap for Restarting Aviation” to align with the “Takeoff” recommendations

Principles for Industry Re-start

IATA committed to five principles for re-connecting the world by air transport:

- Aviation will always put safety and security first
 - Implement a science-based biosecurity regime that will keep passengers and crew safe while enabling efficient operations
 - Ensure aviation is not a meaningful source for the spread of communicable diseases, including COVID-19

Principles for Industry Re-start

IATA committed to five principles for re-connecting the world by air transport:

- Aviation will respond flexibly as the crisis and science evolve
 - Utilize new science and technology as it becomes available: i.e. reliable, scalable and efficient solutions for COVID-19 testing or immunity passports
 - Develop predictable and effective approach to managing any future border closures or mobility restrictions
 - Ensure measures are scientifically supported, economically sustainable, operationally viable, continuously reviewed, and removed/replaced when no longer necessary

Principles for Industry Re-start

IATA committed to five principles for re-connecting the world by air transport:

- Aviation will be a key driver of the economic recovery
 - Re-establish capacity that can meet demands of the economic recovery as quickly as possible
 - Ensure affordable air transport will be available in post-pandemic period

Principles for Industry Re-start

IATA committed to five principles for re-connecting the world by air transport:

- Aviation will meet its environment targets
 - Achieve our long-term goal of cutting net carbon emissions to half of 2005 levels by 2050
 - Successfully implement the Carbon Offsetting and Reduction Scheme for International Aviation (CORSIA)

Principles for Industry Re-start

IATA committed to five principles for re-connecting the world by air transport:

- Aviation will operate to global standards which are harmonized and mutually recognized by governments
 - Establish global standards necessary for an effective re-start of aviation, particularly drawing on strong partnerships with the ICAO and WHO
 - Ensure agreed measures are effectively implemented and mutually recognized by governments

We look forward to
welcoming you!
