

ICAO

Advancements in Air Cargo Connectivity

ICAO EUR-NAT DGCA/2021-2

19 May 2021

Mr. Cortney Robinson

Air Transport Officer, Air Transport Bureau, ICAO

Key Principle #3 – Ensure essential connectivity

States and industry should maintain essential connectivity and global supply chains, especially to remote regions, isolated islands and other vulnerable States.

Recommendation 16 – Facilitating air cargo movement

Member States are encouraged to consider the temporary lifting of restrictions to air cargo operations, including but not limited to granting extra-bilateral rights, in particular for all-cargo services, to foreign airlines to facilitate the transportation of essential goods, supplies and COVID-19 vaccines.

Recommendation 16 Facilitating air cargo movement

- Air cargo operations and the broader supply chain have shown much resiliency, yet instability remains one of the principal problems
- Grant of traffic rights, such as the so-called “7th freedom”, for all-cargo operations will help re-establish global air connectivity for cargo for both transport of vaccines and economic recovery in COVID-19 times
- Detailed options and examples are found in recently released *Guidance on Economic and Financial Measures to Mitigate the Impact of the Coronavirus Outbreak on Aviation*, § 4.2.4

New from ICAO – *Priority Brief: Air Cargo*

Four considerations on the supply chain, its criticality for the emerging e-commerce driven marketplace, the needs for both regulatory evolution and digitalization

Five recommendations include those for digitalization and economic regulatory measures

We welcome your feedback

PRIORITY BRIEF

Digitalization is Key to Trade Facilitation

- 35% of trade by value is transported by air, yet it spends 90% of the time waiting on the ground due to processes between movements
- The WTO Trade Facilitation Agreement (TFA) encourages supply chain actors to digitalize certain procedures, which calls for collaborative solutions in document and data exchange
- Digitalization of air cargo and the broader supply chain supports trade facilitation through time savings and reduction of costs (which COVID-19 tends to increase)
- Stakeholders need data culled from digital platforms to drive operational, as well as national, regional, and global trade policy decisions in a world where e-commerce is rapidly changing the marketplace and states are reviewing their positions in the global supply chain

Objective of the ICAO-UNECE Collaboration

Develop multimodal standards for information exchange across the supply chain as part of the UN Development Account (UNDA) *Transport and Trade Connectivity in the Age of Pandemics* project.

This represents an integrated approach to transport policy, encompassing air cargo and mail supply chains.

Develop technical specifications (standards) for documents accompanying goods transported by air, in the framework of the UNDA COVID-19 response project (segment on digitalization of data and document flows) to support harmonized standardization of data and documents from a multimodal perspective, aligned to the UN/CEFACT semantic standards and Multimodal Transport Reference Data Model.

The Multimodal Transport Reference Model of the United Nations Centre for Trade Facilitation and Electronic Business (UN/CEFACT) that includes the necessary technical specifications for air cargo-related electronic documents and data exchange that will allow implementers to develop aligned electronic document equivalents (e.g., e-Airwaybill, Dangerous Goods Declaration, electronic Consignment Security Declaration).

Support from a diverse and growing group of stakeholders

UN System:

- UNECE
- ICAO

Industry:

- International Air Transport Association (IATA)
- The International Air Cargo Association (TIACA)
- International Port Community Systems Association (IPSCA)
- International Federation of Freight Forwarders (FIATA)

Pilot implementation by States will bring additional partners.
