

# AIP to digital data set transition challenges

Interregional EUR/MID PANS AIM Workshop  
ICAO EUR/NAT, Paris, 10-12 July 2018

Eduard POROSNICU  
DECMA/STR/SWM  
July 2018

# From AIS to Digital AIM

AP Belgium and Luxembourg

ENR 3-5  
24-MAY-2018

Route designator (RNP type)	[Route usage notes]					Remarks
Significant point name (RNP type)	Initial track MAG	Great circle DIST	Upper limit / lower limit	FL series	Controlling unit (Airspace class) Remarks	
	↓ ↑			↓ ↑		
L18 (B-BALK)	(1) CORT-HQ TEMPO issued on ATC instructions due to ML requirements (alternate route L18)					
Δ NICKY DIVOR/DOME (NOK)	510854N 0041102E		FL 108 FL 105	Even (1)		(class C)
	202102	20.3 NM				
Δ DENUT	511410N 0033027E		FL 108 FL 105	Even (1)		(class C)
	202102	0.7 NM

Digital data sets

Transition

## Challenges ahead...

### Digital

- “recording or storing information as series of the numbers 1 and 0, to show that a signal is present or absent”

Be digitally -  
friendly !

### Friendly

- “behaving in a pleasant, kind way towards someone”

(Cambridge Dictionary, <https://dictionary.cambridge.org> )

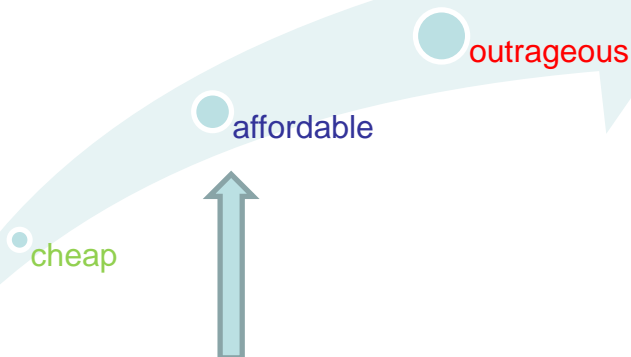

Be friends,  
digitally !

## In this presentation

1. *AIS provisions and practices that are not digitally-friendly*
2. *Digital data impact on the AIS friends*

## ...cost challenge!

- Cost-effective solutions  
(good value for the amount of money paid)

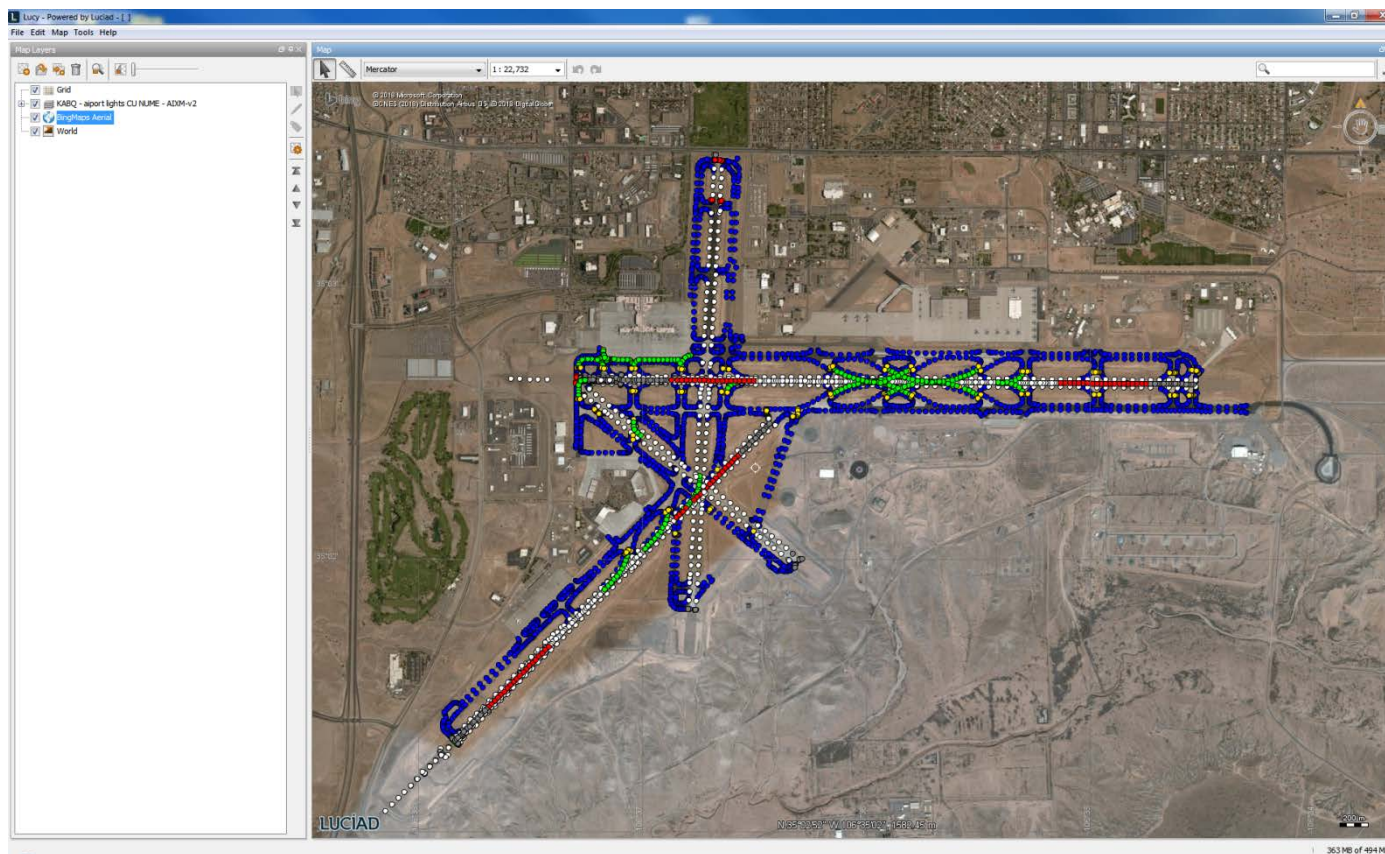

- For example, bi-lateral, tri-lateral, ... regional systems (such as EAD)

- (commercial off-the-shelf)

[illegible]

# COTS technologies possible when...

- Applying standards and industry practices

... such as geographical data coding standards.

However,...

# AIS practices .versus. geographical data standards

- ICAO Annex 14, Volume I
  - “2.5.2 The geographical coordinates of each threshold shall be measured and reported to the aeronautical information services authority in *degrees, minutes, seconds and hundredths of seconds*”
    -  *DDMMSS.ss* – not a native format for digital data coding in commonly available COTS tools...
      - *D.ddddddd* – standard format for digital geographical coordinates
    -  PANS-AIM specifies accuracy “1 m” → far-North/far-South the format requirement could be in conflict with the accuracy requirement
- Proposed reformulation
  -  “2.5.2 The geographical coordinates of each threshold shall be measured and reported to the aeronautical information services authority *in compliance with the data quality requirements specified in PANS-AIM*”

# AIS practices .versus. geographical data standards

## Arc by centre point

## Arc “by edge point”

Even better – do not use arcs and circles when the same result can be achieved with 4, 8, 16, 32... straight segments

# AIS practices .versus. geographical data standards

- Airspace boundaries based on State borders

## BRUSSELS UIR

<b>Lateral limits</b>	510521N 0023244E - 510700N 0020000E - 513000N 0020000E - 512223N 0032147E - along the Belgian-Dutch border - 504515N 0060116E - along the Belgian-German border - 500748N 0060816E - along the German-Luxembourg border - 492810N 0062202E - along the French-Luxembourg border - 493247N 0054907E - along the Belgian-French border - 510521N 0023244E.
<b>Vertical limits</b>	UNL / FL195

## Issues

- Missing data
- Inappropriate resolution
- Paper-drive solution
- Operational justification?

List of points

# In this presentation

1. *AIS provisions and practices that are not digitally-friendly  
(not exhaustive...)*
2. *Digital data impact on the AIS friends*

# What could be left out of an AIP

“5.2.1.1.3 When the **AIP Data Set** (as specified in 5.3.3.1) is provided, the following **sections of the AIP may be left blank** and a reference to the data set availability shall be provided:

1. *ENR 2.1 FIR, UIR, TMA*
2. *ENR 3.1 Lower ATS Routes*
3. *ENR 3.2 Upper ATS Routes*
4. *ENR 3.3 Area Navigation (RNAV) Routes*
5. *ENR 3.4 Helicopter Routes*
6. *ENR 3.5 Other Routes*
7. *ENR 3.6 En-route Holding*
8. *ENR 4.1 Radio navigation aids — en-route*
9. *ENR 4.4 Name-code designators for significant points*
10. *ENR 4.5 Aeronautical Ground Lights — En-route*
11. *ENR 5.1 Prohibited, Restricted and Danger Areas*
12. *ENR 5.2 Military exercise and training areas and air defence identification zone (ADIZ)*
13. *ENR 5.3.1 Other activities of a dangerous nature*
14. *ENR 5.5 Aerial sporting and recreational activities*
15. *\*\*\*\* AD 2.19 Radio navigation and landing aids*
16. *\*\*\*\* AD 3.18 Radio navigation and landing aids “*

“5.2.1.1.4 When the Obstacle Data Set (as specified in 5.3.3.2.2) is provided, the following sections of the AIP may be left blank and a reference to the data set availability shall be provided:

17. *ENR 5.4 Air navigation obstacles*
18. *\*\*\*AD 2.10 Aerodrome obstacles*
19. *\*\*\*AD 3.10 Heliport obstacles “*

# AIP user categories

Digital data sets

## Data users

- Commercial data providers
- AOC
- NM, ATC
- ...

- Extract large amounts of data

Expected to gradually use the data sets as input!

However,...

## AIP document users

- Briefing clients
- VFR/IFR pilots
- Regulators
- ...

- Read information

- Extract small amounts of data

Might have difficulties to use data sets, especially on short term.

Might need affordable solutions, either directly from AIS or from 3<sup>rd</sup> party service providers.

## If there is no coordination...

- some States start providing **parts of the AIP data set**
  - for the subjects that are “quick-wins” (points, nav aids, etc.)
  - immediately after the entry into force of the proposed revision to the Annex 15 (November 2018)
- some States could provide sub-sets that **focus on a particular subject**
  - such as P, D, R airspace, or Routes/Points/nav aids, etc.
- some States could decide to **remove from the AIP the “high cost” tables**
  - such as the ENR 3.x and ENR 4.4, ENR 5.4, AD 2.10 sections;
- some States might **do nothing yet**
  - continue to provide the AIP and none of the recommended new data sets (except for the mandatory Obstacle and Terrain data sets).

# Possible difficulties for all AIS clients

(includes other ECAC States!)

- unable to forecast what will be available as data sets
  - difficulty to plan the investment in tools and process adaptations
- risk of being un-prepared for empty AIP sections
  - A State might announce with 2-3 AIRAC cycles in advance that they will stop the publication of the AIP of certain data
- higher cost
  - needing capability to ingest all kind of data sub-sets, as from one State they could receive the sub-set with points, from other States the airspace, etc.
- difficulty to ingest islands of digital data
  - from the neighbouring States only AIP tables would still be provided

# AIS working together with the clients

- Identify user communities and understand the impact of the transition from AIP tables to digital data sets
  - *Possible approach*
    - *regional inventory of 'AIP table users'*
      - *avoid annoying the users with repeated questionnaires from each State*
      - *avoid a multiplication of effort if each State does it individually*
      - *a truly regional issue*
- Identify transition and long term solutions for clients that are not ready for data sets
  - keep certain tables in the eAIP during the transition period?
  - use COTS (including common office tools) that can format data sets (AIXM) for consultation in tabular format?
  - provision/promotion of graphical/map viewers for AIXM data sets?
  - encourage 3<sup>rd</sup> party service providers (for the long term)?
  - other ideas?

Be friends, digitally !

## In this presentation

1. *AIS provisions and practices that are not digitally-friendly*
  2. *Digital data impact on the AIS friends*
- 
- Other challenges...
    - A more stringent need for cross-border data coordination
    - Requests for the proper identification of the “official State data” when some information is published both as digital data set and paper products...
    - Anything else?

Be digitally - friendly !

Be friends, digitally !
