## NATIONAL AVIATION SAFETY PLAN

## **SECTION 1. INTRODUCTION**

#### 1.1 Overview of the NASP

is committed to enhancing aviation safety and to the resourcing of supporting activities. The purpose of this national aviation safety plan (NASP) is to continually reduce fatalities, and the risk of fatalities, through the development and implementation of a national aviation safety strategy. A safe aviation system contributes to the economic development of and its industries. The NASP promotes the effective implementation of safety oversight system, a risk-based approach to managing safety, as well as a coordinated approach to collaboration between and other States, regions and industry. All stakeholders are encouraged to support

The NASP of is in alignment with the ICAO *Global Aviation Safety Plan* (GASP, Doc 10004) and the

and implement the NASP as the strategy for the continuous improvement of aviation safety.

## 1.2 Structure of the NASP

This NASP presents the strategy for enhancing aviation safety for a period of<br/>addition to the introduction, sections include: the purpose of the NASP,<br/>managing aviation safety, the national operational safety risks identified for the<br/>issues addressed in the NASP, and a description of how the implementation of the safety enhancement initiatives (SEIs)<br/>listed in the NASP is going to be monitored.vers. It comprises six sections. In<br/>strategic approach to<br/>NASP, other safety<br/>(SEIs)

## 1.3 Relationship between the NASP and the State safety programme (SSP)

## [Paragraph below only applies to States that have not fully implemented an SSP]

This NASP addresses operational safety risks identified in the ICAO GASP and thein theabsence of's SSP.is committed to fully implement an SSP byasa State's responsibilities for the management of safety comprise both safety oversight and safety management, collectivelyimplemented through an SSP. Initiatives listed in this NASP address organizational challenges and aim to enhanceorganizational capabilities related to effective safety oversight.

or

#### [Paragraph below only applies to States that have fully implemented an SSP]

Through an effective SSP,identifies and mitigates national operational safety risks. The SSP providessafety information to the NASP. The SSP allowsto manage its aviation activities in a coherent

and proactive manner, measure the safety performance of its civil aviation system, monitor the implementation of the NASP's SEIs and address any identified hazards and deficiencies. The NASP is one of the key documents produced as part of 's SSP documentation. It is the means by which defines and drives the implementation of SEIs generated by the SSP process and drawn from the ICAO GASP and the . It also allows to determine initiatives to strengthen the SSP or otherwise needed to achieve its safety objectives. Safety intelligence gathered through the SSP also contributes to other national plans, such as the air navigation plan. Further information on 's SSP can be found at

#### 1.4 Responsibility for the NASP development, implementation and monitoring

The is responsible for the development, implementation and monitoring of the NASP, in collaboration with and with the national aviation industry. The NASP was developed in consultation with national operators and other stakeholders, and in alignment with the of the GASP and the

## 1.5 National safety issues, goals and targets

The NASP addresses the following national safety issues:

1)	;
2)	;
3)	

To address the issues listed above and enhance aviation safety at the national level, the NASP contains the following goals and targets:

1)	;
2)	;
3)	

#### **1.6 Operational Context**

There are certified aerodromes in , including international aerodromes. The airspace of is classified into Class There were movements in over the period of to .There are currently air operator certificates (AOCs) issued by , and of those there are issued to operators conducting international commercial air transport operations. also has operators, which operate domestic air taxi services, primarily on turboprop aircraft, as well as helicopter operators. There are . Common challenges in heliports in include:

#### SECTION 2. PURPOSE OF

#### 'S NATIONAL AVIATION SAFETY PLAN

The NASP is the master planning document containing the strategic direction of for the management of aviation safety for a period of ). This plan lists national safety issues, sets national aviation years ( to safety goals and targets, and presents a series of safety enhancement initiatives (SEIs) to address identified safety deficiencies and achieve the national safety goals and targets.

The

addresses all aspects of air transport at the State level, with the objective of providing a clear and comprehensive planning and implementation strategy for the future development of the entire civil aviation sector. The NASP contains in-depth information specific to aviation safety aspects that are referenced in

The NASP has been developed using international safety goals and targets and HRCs from both the GASP (www.icao.int/gasp) and the . These are highlighted in the text, where applicable. The SEIs listed in the NASP support the improvement of safety at the wider regional and international levels and include several actions to address specific operational safety risks and recommended SEIs for individual States set out in the

to the

has adopted these SEIs and has included them in this plan. Cross-references are provided for individual SEIs where relevant.

## 'S STRATEGIC APPROACH TO MANAGING AVIATION SAFETY

## SECTION 3.

#### [Paragraph below only applies to States that have not fully implemented an SSP]

The NASP presents the SEIs that were developed based on the organizational challenges (ORG) and operational safety risks (OPS), as presented in the ICAO global aviation safety roadmap, as well as State-specific issues identified by . This plan is developed and maintained by , in coordination with all stakeholders and is updated at least every

years.

or

#### [Paragraph below only applies to States that have fully implemented an SSP]

The NASP presents the SEIs derived from the SSP, including 's safety risk management process and safety data collection and processing systems, as well as the work undertaken by service providers in the development and implementation of their safety management systems (SMS). This plan is developed and maintained by , in coordination with all stakeholders and is updated at least every

years.

The NASP includes the following national safety goals and targets, for the management of aviation safety, as well as a series of indicators to monitor the progress made towards their achievement. They are tied to the goals, targets and indicators listed in the GASP and the and include additional

national safety goals, targets and indicators (if applicable to the State).

Goal	Target	Indicators	Link to GASP and RASP
1.			
2.			
3.			
4.			
5.			
6.			

The SEIs in this plan are implemented through 's existing safety oversight capabilities and the service providers' SMS. SEIs derived from the ICAO global aviation safety roadmap were identified to achieve the national

safety goals and targets presented in the NASP. Some of the national SEIs are linked to overarching SEIs at the regional and international levels and help to enhance aviation safety globally. The full list of the SEIs is presented in the appendix to the NASP.

The NASP also addresses emerging issues. Emerging issues include concepts of operations, technologies, public policies, business models or ideas that might impact safety in the future, for which insufficient data exists to complete typical datadriven analysis. It is important that remain vigilant on emerging issues to identify potential operational safety risks, collect relevant data and proactively develop mitigations to address them. The NASP addresses the following emerging issues, which were identified by for further analysis:

- 1)
- 2)
- 3)

## SECTION 4. NATIONAL OPERATIONAL SAFETY RISKS

The NASP includes SEIs that address national operational safety risks, derived from lessons learned from operational occurrences and from a data-driven approach. These SEI may include actions such as: rule-making; policy development; targeted safety oversight activities; safety data analysis; and safety promotion. Separate sections are provided to address commercial air transport and general aviation to make the information more accessible to stakeholders (if applicable to the State).

publishes an Annual Safety Report, available on the

 website
 . The summary of accidents and serious

 incidents that occurred in
 , and those for aircraft registered in
 involved

 in commercial air transport and aircraft involved in general aviation, is shown in the tables below.
 involved

Year	Fatal accidents	Non-fatal accidents	Serious incidents						
Commercial air transport occurrences in									
General aviation aircraft or	General aviation aircraft occurrences in								

Year	Fatal accidents	Non-fatal accidents	Serious incidents					
Occurrences involving commercial air transport aircraft registered in								
Occurrences involving ger	neral aviation aircraft registe	red in						

The following national high-risk categories of occurrences (HRCs) in the context were considered of the utmost priority because of the number of fatalities and risk of fatalities associated with such events. They were identified based on analyses from mandatory and voluntary reporting systems, accident and incident investigation reports, safety oversight activities over the past years, the SSP (if applicable to the State), as well as on the basis of regional analysis conducted by and on the operational safety risks described in the GASP. These HRCs are in line with those listed in the of the GASP, as well as the :

- 1)
- 2)
- 3)

In addition to the national operational safety risks listed above, the following additional categories of operational safety risks have been identified:

1) 2) 3)

The aviation occurrence categories from the CAST/ICAO Common Taxonomy Team (CICTT) were used to assess risk categories in the process of determining national operational safety risks. The CICTT Taxonomy is found on the ICAO website at <a href="https://www.icao.int/safety/airnavigation/AIG/Pages/Taxonomy.aspx">https://www.icao.int/safety/airnavigation/AIG/Pages/Taxonomy.aspx</a>.

To address the national operational safety risks listed above, identified the following contributing factors leading to HRCs and will implement a series of SEIs, some of which are derived from the ICAO OPS roadmap, contained in the GASP:

HRC 1:	
--------	--

	1)		
	2)		
	3)		
HRC 2:			
	1)		
	2)		
	3)		
HRC 3:			
	1)		
	2)		
	3)		

The full list of the SEIs is presented in the appendix to the NASP.

#### SECTION 5. OTHER SAFETY ISSUES

In addition to the national operational safety risks listed in the NASP, has identified other safety issues and initiatives selected for the NASP. These are given priority in the NASP since they are aimed at enhancing and strengthening 's safety oversight capabilities and the management of aviation safety at the national level.

The eight critical elements (CEs) of a safety oversight system are defined by ICAO. is committed to the effective implementation of these eight CEs, as part of its overall safety oversight responsibilities, which emphasize 's commitment to safety in respect of its aviation activities. The eight CEs are presented in Figure 1 below.

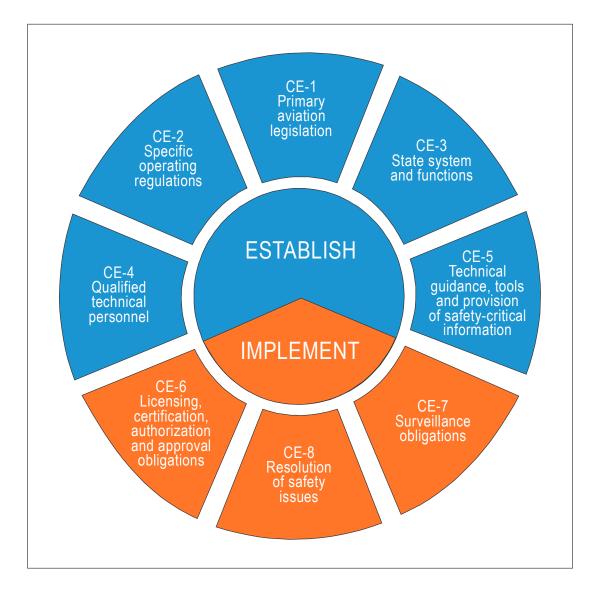

Figure 1. Critical elements of a State's safety oversight system

The latest ICAO activities, which aim to measure the effective implementation of the eight CEs of 's safety oversight system, as part of the ICAO Universal Safety Oversight Audit Programme (USOAP), have resulted in the following scores:

Overall El score									
	%								
	El score by CE								
CE-1	CE-1         CE-2         CE-3         CE-4         CE-5         CE-6         CE-7         CE-8								
%	%	%	%	%	%	%	%		
	El score by audit area <sup>1</sup>								
LEG	ORG	PEL	OPS	AIR	AIG	ANS	AGA		
%	%	%	%	%	%	%	%		

The safety oversight index (SOI) of a State is an ICAO indicator of its safety oversight capabilities. Every State audited by ICAO has an SOI. It is a number greater than zero, where "1" represents a level at which the safety oversight capabilities of a State would indicate the minimum expected capabilities considering the number of departures as an indication of the size of that State's aviation system. The calculations conducted by ICAO of 's SOI have resulted in the following scores:

Overall SOI score	Score in the area of	Score in the area of	Score in the area of	
	Operations	Air Navigation	Support Functions	

The following other safety issues in the context were considered of the utmost priority because they are systemic issues, which impact the effectiveness of safety risk controls. They were identified based on analysis from USOAP data, accident and incident investigation reports, safety oversight activities over the past years, the SSP (if applicable to the State), as well as on the basis of regional analysis conducted . These issues are typically organizational in nature by and relate to challenges associated with the conduct of States' safety oversight functions, implementation of SSP at the national level and the level of SMS implementation by national service providers. They take into consideration organizational culture, policies and procedures within and those of service providers. These safety issues are in line with those listed in the of the GASP, as well as the

1)

<sup>1.</sup> Eight audit areas pertaining to USOAP, i.e. primary aviation legislation and civil aviation regulations (LEG), civil aviation organization (ORG); personnel licensing and training (PEL); aircraft operations (OPS); airworthiness of aircraft (AIR); aircraft accident and incident investigation (AIG); air navigation services (ANS); and aerodromes and ground aids (AGA).

- 2)
- 3)

To address the issues listed above, will implement a series of SEIs, some of which are derived from the ICAO ORG roadmap, contained in the GASP. The full list of the SEIs is presented in the appendix to the NASP.

#### SECTION 6. MONITORING IMPLEMENTATION

will continuously monitor the implementation of the SEIs listed in the NASP and measure safety performance of the national civil aviation system, to ensure the intended results are achieved, using the mechanisms presented in the appendix to this plan.

In addition to the above, will review the NASP every years or earlier, if required, to keep the identified operational safety risks, safety issues and selected SEIs updated and relevant. The will periodically review the safety performance of the initiatives listed in the NASP to ensure the achievement of national safety goals and targets. If required, will seek the support of to ensure the timely implementation of SEIs to address safety deficiencies and mitigate risks. Through close monitoring of the SEIs, will make adjustments to the NASP and its initiatives, if needed, and update the NASP accordingly.

will use the indicators listed in Section 3 of this plan to measure safety performance of the civil aviation system and monitor each national safety target. A periodic safety report will be published to provide stakeholders with relevant up-to-date information on the progress made in achieving the national safety goals and targets, as well as the implementation status of the SEIs.

In the event that the national safety goals and targets are not met, the root causes will be presented. If identifies critical operational safety risks, reasonable measures will be taken to mitigate them as soon as practicable, possibly leading to an unscheduled revision of the NASP.

adopted a standardized approach to provide information at the regional level, for reporting to the RASGs . This allows the region to receive information and assess operational safety risks using common methodologies.

Any questions regarding the NASP and its initiatives, and further requests for information, may be addressed to the following:

# Appendix to the NASP
