**NINTH MEETING OF THE  
COMMUNICATIONS/NAVIGATION/SURVEILLANCE AND  
METEOROLOGY SUB-GROUP OF APANPIRG  
(CNS/MET SG/9)**

Bangkok, Thailand, 11–15 July 2005

---

**Agenda Item 5:**

**Navigation:**

- 2) review States' input on amendment to FASID Table CNS-3 Radio Navigation Aids**

**REVIEW AND UPDATE FASID Table CNS 3 –NAVIGATION SYSTEM**

(Presented by the Secretariat)

**SUMMARY**

This paper presents FASID Table CNS-3 incorporating comments received from States. The meeting is expected to further update the Table and formulate a draft Conclusion to amend the ASIA/PAC FASID in accordance with the established procedure.

**1. INTRODUCTION**

1.1 The CNS/MET SG/8 Meeting considered a proposal to update the FASID Table CNS-3. It was observed that the entries of many States were either out of date or lack adequate information on their plans for transition to GNSS. The meeting considered it desirable that the information in the FASID should be comprehensive and current in order to facilitate regional planning and coordination. As an outcome of discussion, the meeting formulated a Draft Conclusion to urge States to review the Table.

**2. DISCUSSIONS**

2.1 APANPIRG/15 recognized the need to conduct a review of the Table CNS-3 and adopted the following Conclusion;

**Conclusion 15/24 - Revision of FASID Table CNS-3 by States**

That, States review and revise FASID Table CNS-3 to reflect comprehensive descriptions of the future provision of radio navigation aids and that the revised entries be provided to the Regional Office by the end of May 2005.

2.2 As a follow-up of the APANPIRG Conclusion, a State letter T8/5.1:AP028/05 (CNS) was sent to States by the ICAO Regional Office on 8 March 2005. Replies were received from 13 States. The updated Table with proposed amendments is provided at Attachment to this paper for review by the meeting.

2.3 The requirements for radio navigation aids are specified in Table CNS-3 contained in Part IV of the First Edition of ASIA/PAC Facilities and Services Implementation Document (FASID) published in 2001. The respective national plan for the new navigation systems reflected in the bar chart contained in Chapter 8 of the ASIA/PAC Regional Plan for the new CNS/ATM system, issue 6 which are expected to be progressively incorporated in the FASID.

2.4 The meeting is expected to review and update the Table CNS-3 based on the current and future operational requirement and formulate a draft Conclusion for consideration by APANPIRG/16 to amend the ASIA/PAC FASID.

### **3. ACTION BY THE MEETING**

3.1 The meeting is invited to review and update the FASID Table CNS-3 and formulate the following draft Conclusion for Consideration by APANPIRG/16.

#### **Draft Conclusion XX/ – Amendment Table CNS-3 – Radio Navigation Aids**

That, the Table CNS-3 – Radio Navigation Aids provided in ASIA/PAC FASID, Part IV CNS be replaced with the updated Table CNS-3 shown in **Appendix XX** in accordance with the established procedure.

-----

**TABLE CNS-3 – RADIO NAVIGATION AIDS****Explanation of the Table****Column**

1 Name of the country and city (and airport if different name to the city) or, for en-route aids, the location of the facility

2 The function and runway designation number:

NAP – non-precision approach

PA-I – precision approach, Category I followed by designation of runway

PA-II – precision approach, Category II followed by designation of runway

PA-III – precision approach, Category III followed by designation of runway

T – terminal

E – en-route

*Note: Precision approach category refers to the standard of facility performance to be achieved and maintained in accordance with the relevant Annex 10 specifications and not to the specifications of the ILS equipment itself, which are not necessarily the same.*

3 The distance and altitude to which signal protection of the VOR or VOR/DME is required, indicated in nautical miles (NM) and thousands of feet, or rated coverage of NDB expressed in nautical miles.

4 ILS – Instrument Landing System

5 L – Locator, either associated with an ILS or for use as an approach aid to an aerodrome.

6 DME – Distance Measuring Equipment. Aligned with the ILS shown in column 4 when the DME is required to serve as a substitute for a marker beacon. When aligned with VOR in column 7, indicates the DME to be collocated with the VOR.

7 VOR – Very High Frequency (VHF) Omni directional radio Range

8 NDB – Non Directional Beacon

9 MLS – Microwave Landing System

10, 11 DGNSS – Differential Global Navigation Satellite System: GBAS and SBAS. Where requirements for DGNSS for PA-I approach and landing are planned, function and runway designation numbers should be entered as described in Column 3 above with planned implementation date.

Column

- 12      GNSS – Global Navigation Satellite System. Where requirements for GNSS for NPA, terminal area and en-route functions are planned, function and/or runway designation number should be entered with implementation dates as described in column 3 above.
- 13      Remarks:

Note: The following codes are used in columns 5 to 12:

- I      - required and implemented;
- X      - required but implementation status undetermined;
- N      - required but not implemented;
- A      - existing facility, requirement for which is not specified;  
(‘A’ is used to show a substitute facility for the requirement that is not yet implemented ‘N’)
  
- F      - Future plan, the requirement for which is not specified
- - the requirement for less than sole means facilities should be annotated with an asterisk;
- <year    -planned commissioning year, to be used as appropriate in conjunction with ‘F’ and ‘N’;
- >year    -planned decommissioning year, to be used as appropriate in conjunction with ‘A’ and ‘I’
