ECUADOR | 7 STATIONS

We are a company that provides **safe, fast and efficient airport services.**

Total safety and security	Latest technology		Engaged with society
	Strengths	Quality assurance program	
Efficiency in operations		Comprehensive service	
Committed team			Recognition

The pillars on which our value proposition is built are: modern **infrastructure, security** in all our processes, **advanced technology** and **world-class standards.**

□ We use, develop and incorporate technological solutions that allow us to respond with success, safety and speed to the needs of our clients:

✦ SIATA

- Integral Aircraft Attention System is a modern solution for planning, scheduling and controlling the operations of the airlines we serve, allowing to optimize the processes and resources required for each flight in real time.

✦ QUANTUM Ground Support Equipment (GSE)

- Technological solution that allows to optimize the management of the fleet of equipment of ramp through an efficient administration of the resources that are arranged for its handling.

✦ PCO

- System of Programming and Control of Operations for the export and import cargo.

24 / 7 Monitoring Of Your Ground Fleet

Access Control

Offers flexible options to increase airport safety and security through transparency, driver accountability and increased responsibility

Motion Monitoring

Keeps a permanent eye on your fleet and reports on all irregularities over and above a pre-defined threshold

Impact Monitoring

Ensuring full accountability and responsibility by those concerned

Geofencing

- Restricting the movement of a vehicle, or other fleet asset, to within a specified area
- Location of the unit is monitored by GPS (Global Positioning System)
- An alarm will be raised if it leaves its authorized area

Access Control

- Offer flexible options to increase airport safety and security through transparency, driver accountability and increased responsibility.

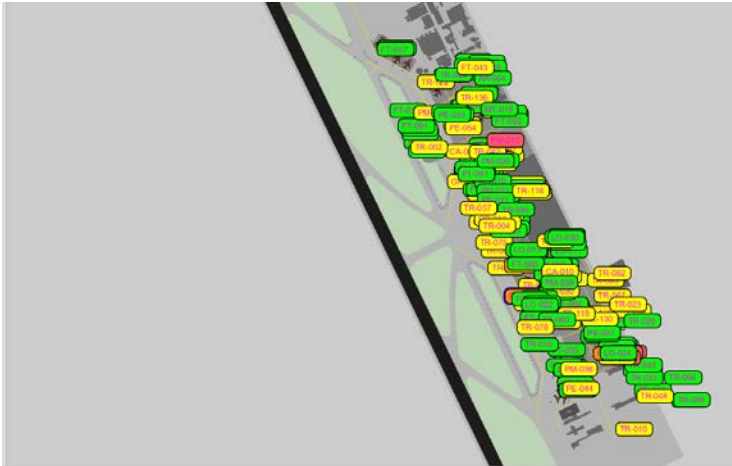

- Codified access key for each GSE operator (personalized)
- Record from the beginning until the end of GSE operation on a shift.
- Access key is personalized and intransferable.
- Real time map visualization of an operator and the GSE in usage.
- System limits the operation of a GSE by an operator with any training out of date.

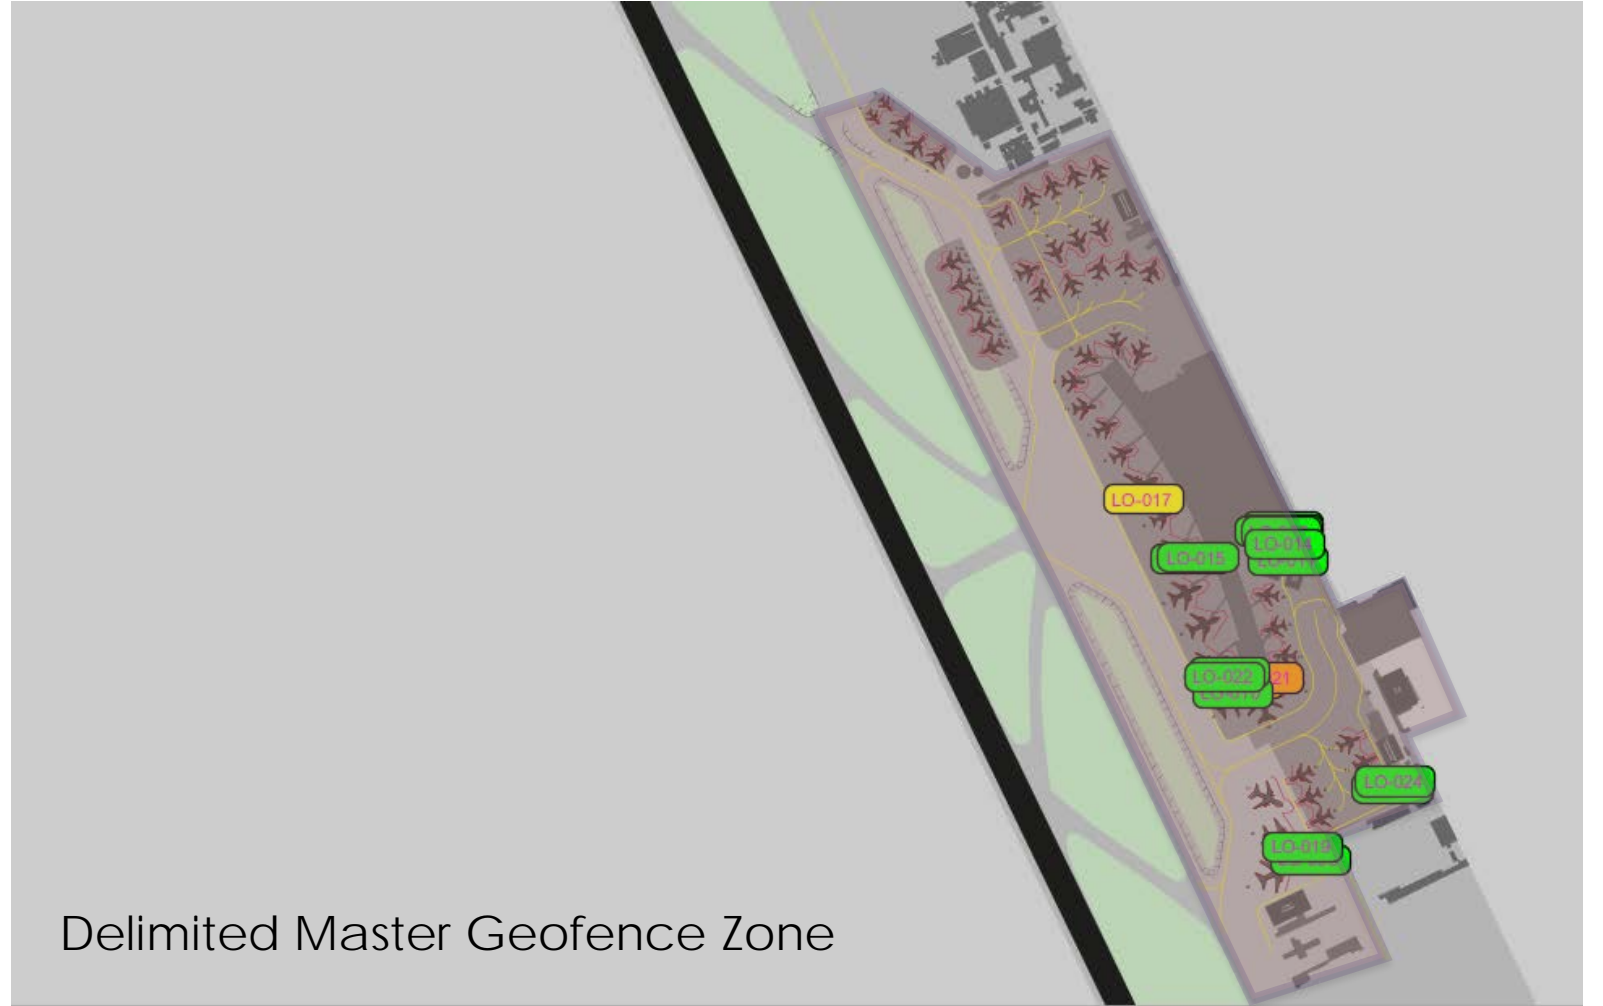

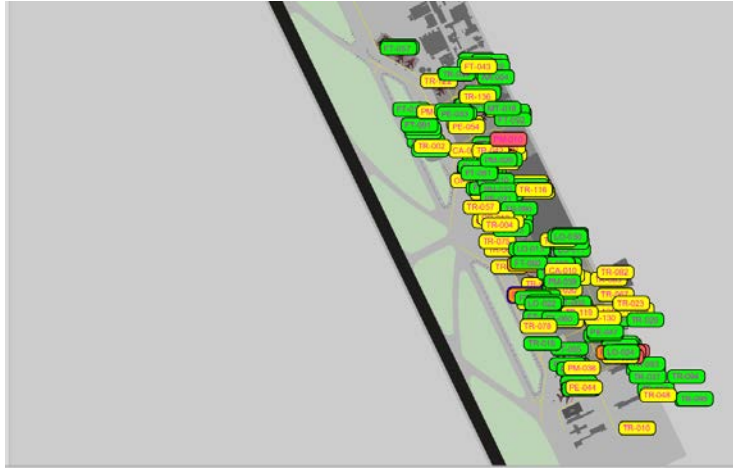

Geofencing

- Restricting the movement of a vehicle, to within a specified area
- Location of the unit is monitored by GPS
- An alarm will be raised if it leaves its authorized area

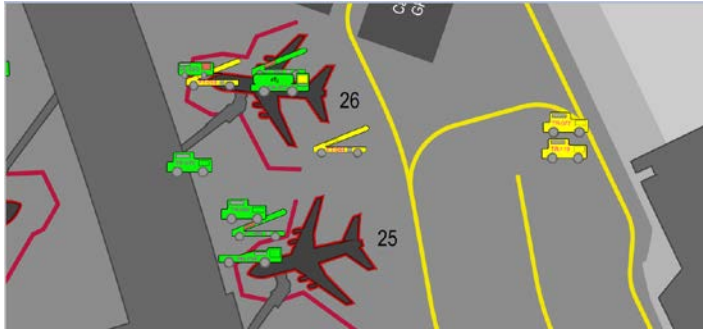

- Each vehicle is monitored on real time
- Our Operations Control Center has a 24 hours operator position to monitor GSE on AIJCh apron
- A master Geofence is configured covering the airport tarmac
- Other Geofences are configured to determine other restricted areas (bag room, military areas, cargo areas, etc.)
