# Automation in Canada

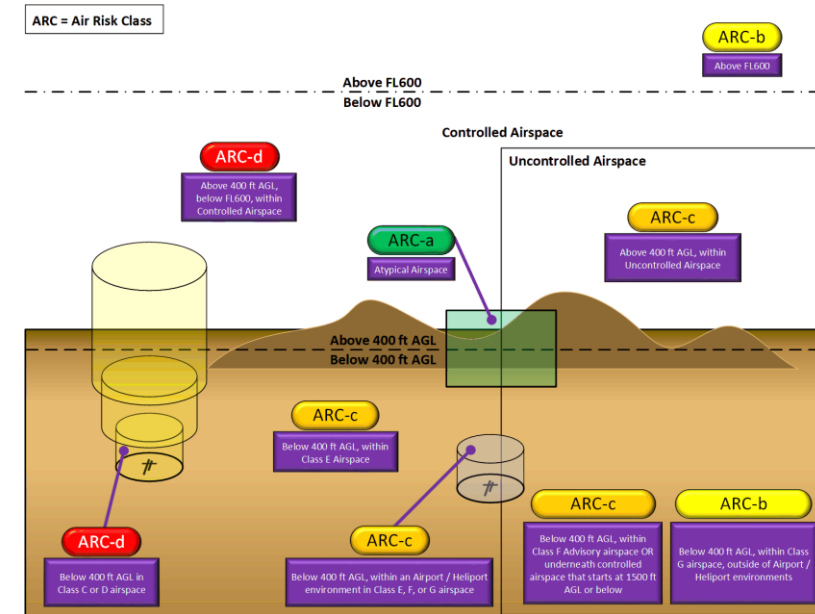

- The Canadian Operating Environment:
  - Large geographic area (long distances);
  - Concentrated pockets of population;
  - Significant aviation infrastructure; and
  - Limited communications coverage.

# Dimensions of Automation

- Operational Risk;
- Airspace Systems;
- Aircraft Functional Architecture;
- Degree of Automation; and
- Technology maturity.

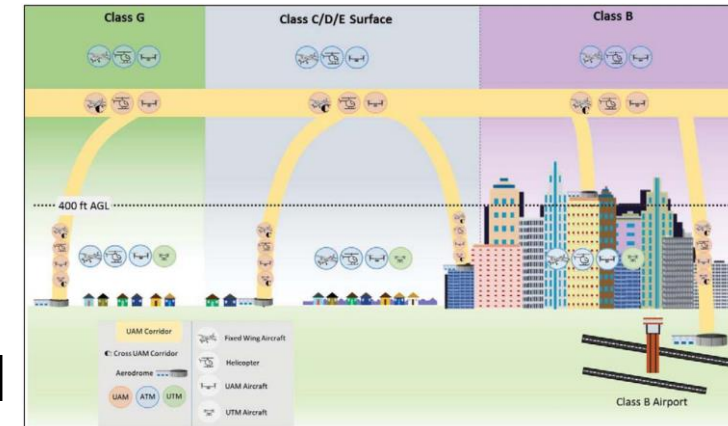

UAS Automation Levels in				
Level	Level 0	Level 1	Level 2	Level 3
Functions	Manual Operation	Assisted Operation	Task Reduction	Supervised Automation
Human-Machine Teaming	Human led	Human-In-the-loop	Human-In-the-loop	Human-In-the-loop
Sustained Aircraft Maneuver Control	Human	Human AND Machine	Machine (Managed by Human)	Machine (Managed by Human)
Object and Event Detection and Response (OEDR)	Human	Human	Machine (Managed by Human)	Machine (Managed by Human)
Fallback (Integrity Thresholds Exceeded)	Human	Human	Human	Human
Communication with External Systems (Ground and Airspace systems)	Human	Human	Human OR Machine (Managed by Human)	Machine (Managed by Human)

# Addressing the Challenges

- Type Certification of autonomous aircraft remains the goal but there are significant challenges to overcome including:
  - Definition of operational environments;
  - SMS roles & responsibilities;
  - Certification Standards & Means of Compliance; and
  - Operationally specific configuration considerations.
- Transport Canada is working with the National Research Council Canada to develop an approach to safe certification of autonomous aircraft.

# Thanks!
