

Cursir was founded in 2015 as a spin-off project of Russian landing and navigation systems manufacturer RTS Union. At the moment, Cursir is a separate company that produces NAVAID calibration drones for extended ground checks and flight tests.

The company works in close cooperation with the State Air Traffic Management Corporation of the Russian Federation and the Federal Air Transport Agency. Cursir is a member of the workgroup for the implementation of drones in the work of the ANSP and changes to Federal aviation regulations in Russia.

Cursir operates worldwide, providing products and services for air navigation service providers.
