Background

State Representation

ICAO

WMO

METP

Expert Members
The Meteorology Panel (METP) was established (ANC 197-5) to define and elaborate concepts and to develop ICAO provisions for aeronautical meteorological (MET) services consistent with operational improvements envisioned by the Global Air Navigation Plan (GANP), (Doc 9750) and in keeping with the working arrangements between ICAO and the World Meteorological Organization (WMO) (Doc 7475).

The METP shall collaboratively determine operational requirements for aeronautical MET service provision as an enabling function for a future globally interoperable air traffic management system and identify solutions, in coordination with WMO, to effectively and efficiently fulfil the requirements through sound scientific and/or technological capabilities.
Background - Overall Mandates

- Annex 3 – *Meteorological Service for International Air Navigation*
- WMO Technical Regulations Pub 49
- *Working Arrangements between the International Civil Aviation Organization and the World Meteorological Organization*
  - Doc 7475
- Meteorology Panel
  - Terms of Reference
METP.009.03 – Development of provisions for information on space weather to international air navigation

Problem Statement – Space weather events such as solar radiation storms, solar flares, geomagnetic storms and ionospheric disturbances that impact earth pose a risk to flight safety, impacting communication, navigation systems, on board avionics and also posing a risk to the health of aircraft occupants.

Expected Benefits – To provide information on space weather and to avoid the risks posed to flight safety regarding communications, Satellite-base navigation surveillance, and avionics, as well the risk to the health of aircraft occupants (i.e. flight crew and passengers) due to radiation exposure. Integrate the information produced into the SWIM environment in line with the GANP.
Background Requirements

- IAVWOPSG
- 2014 Meteorology (MET) Divisional Meeting
- Meteorology Panel (METP/2) Meeting
- Air Navigation Commission (ANC)
Guidance on Criteria for SW Providers

To ensure quality, reliability, and integrity of the space weather information service for international air navigation, a space weather information provider should demonstrate and/or provide evidence that it meets the following criteria:
Guidance on Criteria for SW Providers

1-Institutional Criteria

a) Experience as a designated national space weather information provider
b) A Quality Management System (Annex 3 - Meteorological Service for International Air Navigation, Chapter 2, Paragraph 2.2.2)
c) Appropriate qualifications of personnel and an ongoing competency and training program (WMO-No 49, WMO-No 258)
d) Adherence to all applicable data rights
e) Procedures to liaise with aviation decision-makers and gather feedback on the space weather information service
f) Procedures to coordinate with other space weather information providers
g) A source of funding and an adequate level of funding to provide the space weather information service for a period of at least 3 years
Guidance on Criteria for SW Providers

2-Operational Criteria

a. 24/7 operational capability

b. A system reliability of 99.9 percent with no single failure exceeding 90 minutes in a 24-hour period

c. A system availability of 98.0 percent with no single outage exceeding 4 hours in a 1-year period

d. A system maintainability of 95.0 percent for a 2-hour interval
Guidance on Criteria for SW Providers

3-Technical Criteria

a) Ability to provide the space weather information service, both near real-time and forecast information, as defined in the draft SARPs for Amendment 78 of ICAO Annex 3 Meteorological Service for International Air Navigation.

b) Ability to access observations (own observations and received from other space weather providers) of:
   - Coronal mass ejections and high-speed streams
   - Geomagnetic storms
   - Solar radiation storms
   - Solar flares
   - Solar radio bursts
   - Ionospheric activity

c) Ability to produce near real-time and forecast information regarding the potential impacts of space weather using numerical models capable of ingesting observation data from multiple sources.

d) Ability to produce near real-time and forecast information that meets the proposed functional and performance requirements.

e) Ability to coordinate and harmonize information with the space weather information providers for adjacent areas of responsibility, as necessary.

f) Ability to conduct forecast verification
Guidance on Criteria for SW Providers

4-Communication/Dissemination Criteria

a) Ability to provide the space weather information service to aviation decision-makers, as defined in the draft SARPs for Amendment 78 of Annex 3 - Meteorological Service for International Air Navigation.

b) Ability to provide a communications system and infrastructure that supports the availability, maintainability, and reliability criteria is section 2.

c) Ability to provide the space weather information service via the following means of dissemination:
   – ICAO Aeronautical Fixed Service
   – World Area Forecast System Internet File Service
   – Secure Aviation Data Information Service
   – Regional OPMET centres

Note: The criteria in paragraphs 1, 2, 3 and 4 above may be met by a single entity or a consortium of multiple space weather information providers with appropriate arrangements for coordination and harmonization.
## Schedule for Establishing Space Weather Information Capability

<table>
<thead>
<tr>
<th>Start Date</th>
<th>End Date</th>
<th>Description</th>
<th>Responsibility</th>
</tr>
</thead>
<tbody>
<tr>
<td>May 2017</td>
<td>June 2017</td>
<td>Issue State Letter requesting interest in providing the space weather information service.</td>

ANC Job Card METP .009.02 refers - Action (9843) - Review the WMO audit reports, indicate the optimal number of space weather information providers, and provide a summarized list giving the strengths and weaknesses of all the candidate provider States based on evaluation of the space weather information selection criteria.
SARPs in *Annex 3- Meteorological Service for International Air Navigation*

- Chapter 1-Definitions;
- Chapter 3- Specific SW requirements;
- Chapter 9- Service for operators and flight crew members;
- Appendix 2- New Space Weather Centres and Table A2-3. Template for advisory message for space weather information;
- Appendix 8- Specifications related to flight documentation; and
- Attachment E- Spatial ranges and resolutions for space weather advisory information

Amendment of Annex 3 and consequential amendments to Annex 15, PANS-ABC and PANS-ATM adopted by ICAO Council in March 2018
METP/3 Meeting

Held in Montreal, from 26 to 27 April 2018. Attended by members and observers nominated by 10 Contracting States and 5 international organizations.

Agenda, as approved by the Air Navigation Commission (ANC):

Item 1: Opening of the meeting
Item 2: Working arrangements
Item 3: Review of WMO audit reports of prospective space weather information providers’ capability to fulfil proposed ICAO provisions for a space weather information service
Item 4: Recommendation of the optimal number of space weather information providers
Item 5: Any other business
## Recommendation

Overall recommendation on the compliance (at the time of observation and against the ICAO-defined criteria) of the prospective space weather information providers:

* Austria, Belgium, Cyprus, Finland, Germany, Italy, the Netherlands, Poland and the United Kingdom

Note. — It is the sole responsibility of ICAO to decide whether or not to take the WMO findings presented in this report into account during its (ICAO’s) designation of the space weather information provider(s) that will serve international civil aviation.
METP/3 Meeting Outcome

Recommendation 3/1 — Demonstrated capability of prospective space weather information service providers at the time of assessment

That, in view of the WMO audit report (Appendix A to this report) on the capability of prospective space weather information providers’ of space weather providers’ for a space weather information service for international civil aviation:

a) **Australia, Canada, China, France, Japan, PECASUS, Russian Federation, and the United States**; be considered compliant at the time of the site assessment and audit; and,

b) **South Africa** be considered compliant but with qualification at the time of the site assessment and audit.

Note.- **PECASUS is a Pan-European Consortium of Aviation Space Weather User Services formed by Austria, Belgium, Cyprus, Finland (as consortium lead), Germany, Italy, the Netherlands, Poland and the United Kingdom.**

Note.- **Appendix B to this report contains a summary of the strengths and weaknesses of the prospective space weather information providers and is to be used in conjunction with Appendix A.**
Note 1: Operational procedures for coordination and back-up between the global space weather information providers, and the subsequent coordination and back-up arrangements for regional space weather information providers, will be defined in an appropriate ICAO guidance document.

Note 2: A global space weather information provider may also fulfil the responsibilities of a regional space weather information provider for a designated area of responsibility.

Note 3: Work on establishing the Regional space weather information service should begin as soon as possible supported by a MET Panel review, in 2020, of the Global space weather information service implementation to assist the process of implementing the Regional space weather information service;

Note 4: Regional space weather information service providers may continue to provide information directly to an operator at the request of the operator.
METP/3 Meeting Outcome

Recommendation 3/2: Optimal number of space weather information providers

That, in the context of the optimal number of space weather information providers considered necessary to fulfil the associated ICAO Annex 3 – Meteorological Service for International Air Navigation provisions, the Meteorology Panel (METP) recommends that:

a) Not later than November 2018, two (2) global space weather information providers be established that conjointly provide information on space weather impacts to High Frequency (HF) radio communications, satellite communications, Global Navigation Satellite System (GNSS)-based navigation and surveillance, and radiation exposure at flight levels;

b) In addition to a) and not later than November 2022, up to four (4) regional space weather information providers be established that provide complementary higher-resolution information for HF communications, satellite communications and GNSS-based navigation and surveillance in support of the global space weather information service and,

c) Not later than 2027, ICAO, in close coordination with the World Meteorological Organization (WMO), reassesses the optimum number of global and regional space weather information providers.

16 to 20 July 2018
NAM/CAR/SAM Seminar on Space Weather and ICAO IWXXM, Panama
3.13 The Panel recognized that it would be highly desirable to expeditiously obtain information regarding the preferences of the States and consortium audited for the provision of global and/or regional services, any further intentions to form or join existing consortia, the specific space weather information components that they are willing to provide and the extent to which they are willing to share space weather data. It was also recognized that the States and consortium concerned should also be invited to comment on any actions that they have undertaken or that they intend to undertake to address shortcomings (if any) identified in the WMO audit report. Additionally, it was recognized that the availability of this information would constitute an important input to assist in the allocation of future responsibilities by ICAO.
Next Steps

- ANC Review METP recommendations and provide proposals for designation of providers of space weather information for Council consideration (June 2018).
- ANC Report to Council (September 2018).
- Council designation of provider(s) of space weather information capability (September 2018).
- Providers start production and dissemination of space weather information (November 2018).
Conclusion

ICAO is confident that the implementation of the space weather information service will be a significant contribution to the achievement of the safety level needed by civil aviation, especially in light of the remarkable traffic growth that is forecasted.
THANK YOU!

16 to 20 July 2018
