

危险物品专家组（DGP）

第二十六次会议

2017年10月16日至27日，蒙特利尔

议程项目 2： 拟定对《危险物品安全航空运输技术细则》（Doc 9284 号文件）的修订建议，以便纳入 2019 年 — 2020 年版

旅客和机组人员携带的电子香烟意外启动的情况

（由A. Stubblefield提交）

摘要

本工作文件提议修订允许旅客或机组人员携带的危险物品清单（表 8-1），以解决手提行李中的便携式电子吸烟装置（例如电子香烟）意外启动的安全关切。

危险物品专家组的行动：请危险物品专家组按照本工作文件附录 A 所示，对表 8-1 的拟议修订进行审议。

1. INTRODUCTION

1.1 Specific provisions were added into the ICAO Technical Instructions, Part 8, Table 8-1, for portable electronic smoking devices (e-cigarettes) through the issuance of Addendum No. 1 to the 2015-2016 ICAO Technical Instructions (26-May-2015). The provisions added were the prohibition of e-cigarettes in checked baggage, spare batteries must be protected from short circuits, and the recharging of the device and batteries is not permitted on board the aircraft.

1.2 In the United States, there have been ten documented heat/smoke/fire incidents involving e-cigarettes since the introduction of these provisions in Table 8-1 (i.e. during the period May 2015 through May 2017). Seven of those incidents occurred inside a passenger plane and three occurred inside

the airport.¹ These incidents typically involved the e-cigarette device while it was being transported in carry-on baggage (See Appendix B for incidents). While the specific cause of each of these incidents is unknown, a concern in all these incidents is the accidental activation of the e-cigarette device. When these e-cigarette devices are activated, the power from the battery is allowed to energize a heating coil. This heating coil is only designed to be turned on for a few seconds while it is submerged or surrounded by e-cigarette liquid (E-liquid, E-juice, etc.). If the heating coil is energized for longer than a few seconds, all the e-cigarette liquid is vaporized, and the entire e-cigarette device starts to overheat, smoke, and potentially catch on fire. This heat is also transferred to the battery, which are mostly lithium ion batteries, with the potential to drive the lithium ion battery into thermal runaway.

1.3 The proposal introduces a provision in the e-cigarette entry in Table 8-1 that requires passengers or crew to take effective measures for preventing accidental activation of the heating element of the e-cigarette device when transporting such devices in carry-on baggage on-board passenger aircraft. Examples of effective measures include, but are not limited to, removing the battery from the e-cigarette; separating the battery from the heating coil; placing the e-cigarette into a protective case; using a protective cover, safety latch, or locking device on the e-cigarette's heating coil activation button; and electronics or technology in the device designed to prevent accidental activation such as requiring the e-cigarette to be powered on before the heating coil button can be activated. In most e-cigarettes, the battery can either be easily removed or easily separated from the heating element.

2. ACTION BY THE DGP

2.1 The DGP is invited to consider the amendment of the provisions for dangerous goods carried by passengers or crew as shown in Appendix A to this working paper.

¹ The three incidents that occurred inside the airport may be relevant to the safety risk of lack of effective measures to prevent accidental activation of an e-cigarette's heating element inside a passenger aircraft because the passengers in possession of such devices were either imminently going to be boarding a passenger aircraft or had just departed one. These incidents are considered near-misses because they could have occurred on-board the aircraft.

附录A

对《技术细则》第8部分的拟议修订

第 8 部分

有关旅客和机组成员的规定

表 8-1. 关于旅客或机组成员携带的危险物品的规定

用品或物品	位置			需经运营人批准	必须向机长通报	限制
	交运行李	手提行李	随身携带			
日用消费品						
.....						
19) 电池供电的便携式电子吸烟装置（例如电子烟、电子烟、电子雪茄、电子烟斗、个人喷雾器、个人电子尼古丁输送系统）	否	是	是	否	否	a) 旅客或机组成员为个人自用携带； b) 备用电池必须单个做好保护以防短路（放入原零售包装或以其他方式将电极绝缘，如在暴露的电极上贴胶带，或将每个电池放入单独的塑料袋或保护盒当中）； c) 每一电池不得超过以下限制： — 对于锂金属电池，锂含量不超过2克；或 — 对于锂离子电池，瓦时额定值不得超过100Wh； d) 锂电池所属类型必须符合联合国《试验和标准手册》第III部分38.3小节规定的每项试验的要求；和 e) 不允许在航空器上给装置和/或电池充电； <u>和</u> f) <u>装置必须具备有效措施，防止加热元件在航空器上意外启动。</u>

APPENDIX B

E-CIGARETTE DEVICE SMOKE/HEAT/FIRE EVENTS

(Specific to Carry-On Baggage Since May 25, 2015)

Date	Source	Type of Battery	Device (if applicable)	Carrier	Aircraft Type (Passenger or Cargo)	Incident Summary
5/14/2017	Airport Authority	Li-ion	E-cig	N/A	N/A	Information, including video footage, from the Seattle Airport Authority and witness statements show an individual's e-cig exploding, resulting in burning of his shirt and backpack.
4/19/2017	Carrier	Li-ion	E-cig	Southwest	Passenger	Passenger on Southwest flight number 4639 from Columbus, OH to Chicago, IL (MDW) reported to a flight attendant that there was smoke coming from her purse. Passenger was carrying an e-cigarette/vaping device. The flight attendant put the e-cigarette/vaping device and two spare lithium ion batteries into a fire safe bag to extinguish the smoke.
4/9/2017	Media	Li-ion	E-cig	N/A	N/A	A passenger was at Hudson News convenience store, near gate "D" in LAS airport prior to boarding a flight. Left front pocket exploded and fire erupted. Passenger was burned and hospitalized with burns to his left thigh and left hand.
12/15/2016	Carrier	Lithium-ion	E-cig	American Airlines	Passenger	American Airlines flight 1129, which was en route from Dallas-Fort Worth, TX to Indianapolis IN, diverted to Little Rock, AR, after a passenger observed that his e-cigarette had overheated and was emitting smoke. The cabin crew used fire extinguishers to extinguish the e-cigarette.
10/30/2016	Carrier/SPO T Report	Lithium-ion	E-cig	Alaska	Passenger	At Ketchikan, AK (KTN) airport, during boarding of Alaska Airlines flight 67, a passenger's backpack containing an e-cigarette caught fire. The passenger dumped contents on the floor and crew used fire extinguishers to put out the fire. No injuries reported. Scorch marks to carpet of the aircraft were the result of the fire.
9/7/2016	Airport Operations	Lithium-ion	E-cig	N/A	N/A	As a passenger was entering the baggage claim area of DAL airport an e-cig in her purse exploded and burned the purse, some of its contents and charred her shirt. Witnesses stated there were small projectiles, which were on fire exiting her purse. They were extinguished by people standing at the baggage claim area waiting for their bags.
6/14/2016	Carrier	Lithium-ion	E-cig	Spirit	Passenger	During boarding a passenger was carrying a backpack when another passenger noticed the fire. The plane was offloaded immediately. The DEN Fire Department responded, extinguished the fire and determined the e-cigarette in the carry-on bag (backpack) was the cause. The aircraft was cleared, cleaned and put back in service. The passenger chose to take the remains of the backpack with him.

Date	Source	Type of Battery	Device (if applicable)	Carrier	Aircraft Type (Passenger or Cargo)	Incident Summary
6/10/2016	Carrier	Lithium-ion	E-cig	Spirit	Passenger	Flt 765 from San Jose Costa Rica to Fort Lauderdale, e-cig began to smoke in a passenger's backpack on seat. Fire extinguished with a fire extinguisher and then the e-cig was submerged in water. Flight continued and landed in FLL without further issues.
3/16/2016	Carrier	Lithium-ion	E-cig	Delta	Passenger	DL flt 689- E-cig in passenger's carry-on caught fire during boarding process. Fire extinguished by flt attendant
6/17/2015	Carrier	Lithium-ion	E-cig	Southwest Airlines	Passenger	During a Southwest flight from LAS-ALB a passenger stated he felt the e-cigarette in his pants pocket pop and he leg began to burn. When he removed the e-cig from his pocket he saw the battery shoot out of the device. The e-cig was cracked and smoking. The crew submerged the battery and device in water. The passenger had minor burns on his leg but refused medical attention upon arrival in ALB.
