SYNOPSIS

JetX flight AEU804 (callsign Flightstar 804) was a subcharter to carry a 189 passengers from Antalya, Turkey to Keflavik, Iceland. The flight was a positioning flight from Keflavik to Antalya and the actual passenger load from Antalya was 187 passengers plus one infant. The flight crew was augmented by one pilot as the duration of the flight duty was estimated to be 14 hours and 15 minutes. Due to technical reasons and flight planning the flight was delayed and the actual duration of the flight duty period was 17 hours and 20 minutes. The flight crew rested in the cockpit of the aircraft and did not use the crew rest area located in the passenger compartment from Keflavik to Antalya nor on the way back to Keflavik.

The flight crew made an unscheduled fuel stop in Edinburgh before continuing on the last leg to Keflavik. An approach was set up for runway 02 at Keflavik International Airport. The aircraft contacted the runway and then bounced up into the air again before full runway contact was made with the main landing gear tires followed by the nose landing gear tire. The aircraft was not decelerated enough when nearing the runway end so the pilot flying attempted to turn the aircraft onto taxiway November at the end of the runway. The aircraft skidded off the taxiway and came to rest parallel to the taxiway with the nose landing gear and the right main landing gear off the paved surface.

There were no injuries to the passengers or the crew. The incident was reported by the local police to AAIB Iceland. The investigation focus was on radio communication, runway friction measurements, flight planning, and flight crew fatigue. The report makes 8 safety recommendations.
