

WORKFLOW FOR THE REQUEST AND COORDINATION OF INTERROGATOR CODES

Note:

- 1) Interrogators that do not perform lock-out do not require coordination for IC. Example of such interrogator is the interrogator of an active MLAT
- 2) Interrogators must support II/SI code operations before it is allowed to use SI code.
- 3) States/Administrations are encouraged to use SI codes for interrogators that support II/SI code operations. But States/Administrations may choose to use II code for reasons such as safety assessment for the use of SI code has yet to be completed.
- 4) II=0, SI=16, 32 and 48 will not be assigned by ICAO APAC Regional Office.
