

*International Civil Aviation Organization*  
**ICAO** **Twenty-Ninth Meeting of the Regional Airspace Safety  
Monitoring Advisory Group (RASMAG/29)**

Bangkok, Thailand, 19 – 22 August 2024

---

**Agenda Item 5: Airspace Safety Monitoring Activities/Requirements in the Asia/Pacific Region**

**JASMA LTHM BURDEN ESTIMATE UPDATE**

(Presented by JASMA)

**SUMMARY**

This paper presents the current monitoring burden for aircraft registered and operated by Japanese operators to meet Annex 6 Long Term Height Monitoring (LTHM) requirements as of June 2024.

**1. INTRODUCTION**

1.1. As agreed at the Sixteenth Meeting of the Regional Airspace Safety Monitoring Advisory Group (RASMAG/16), each RMA shall develop monitoring burden tables using the format presented in RASMAG/16/WP17. The Japan Airspace Safety Monitoring Agency (JASMA) presents the current update to that data. The **Attachment** provides the JASMA monitoring burden table.

**2. DISCUSSION**

2.1 There was a total of 829 airframes that were approved for the Reduced Vertical Separation Minima (RVSM) on the RVSM approvals database maintained by the JASMA as of 30 June 2024.

2.2 Applying the Minimum Monitoring Requirements (MMR) to the total of RVSM approved aircraft results in a total monitoring burden to be achieved of 152 airframes. Taking into account aircraft which was approved RVSM for the first time or were conducting height monitoring within the past two years, the outstanding burden is 9 airframes (1.1%) as of 30 June 2024.

2.3 The remaining aircraft are operated by small aircraft operators or State. JASMA supposes that the flight hours of these operators' aircraft might not have reached 1,000 hours within the recent two years.

**3. ACTION BY THE MEETING**

- 3.1 The meeting is invited to:
- a) note the information contained in this paper; and
  - b) discuss any relevant matters as appropriate.

.....
