Civil Aviation Authority of Singapore

Introduction

- Need a standardized way for naming things in APAC SWIM
- Helps with maintaining interoperability

Standardized Nomenclature

- Propose to use AIRM as the reference for all the standard aeronautical terms
- System to EMS - > propose the use of topics for systems to publish to EMS
  - Structure to follow
    - <Type>/<Country (ISO 3166)/ <Organization>/<Environment>/<System Name>/<Version>/……
- However, EMS to EMS queue names to be decided.
    - Will depend on hierarchy or Mesh architecture.
