WORKING PAPER (WP/15)

ICAO

**ICAO Asia and Pacific (APAC)
Twenty-third Meeting of the Meteorological Information
Exchange Working Group (MET/IE WG/23)**

Bangkok, Thailand, 25 to 28 March 2025

**Agenda Item 3: Quality control, monitoring, and management of meteorological
information exchange**

RESULTS OF SIGMET TESTS 2024 – TC and VA

(Presented by Japan)

SUMMARY

This paper presents the results of the ASIA/PAC SIGMET tests conducted in November 2024 for tropical cyclone and volcanic ash.

1. INTRODUCTION

1.1 The MET Divisional Meeting (2002) formulated Recommendation 1/12 b), Implementation of SIGMET requirements, which called, inter alia, for the relevant Planning and Implementation Regional Groups (PIRGs) to conduct periodic tests of the issuance and reception of SIGMET messages, especially those for volcanic ash.

1.2 The Regional SIGMET tests were conducted on the following dates (month/date) for the last 5 years:

SIGMET for	2020	2021	2022	2023	2024
TC	12/02	12/08	11/9	11/8	11/13
VA	12/09	12/15	11/16	11/15	11/20

2. DISCUSSION

Schedule and procedure of SIGMET tests

2.1 In its State letter dated 29 October 2024 on the schedule for SIGMET tests in the Asia/Pacific Region – November 2024, the ICAO Asia Pacific Regional Office notified the following schedule and the procedure of the regional SIGMET tests:

SIGMET test for tropical cyclone

- 13 November, 0200 UTC or 0500 UTC or 0800 UTC (refer to the attached SIGMET Test Procedures):
 - TCACs issue a tropical cyclone advisory test message;

- MWOs issue a SIGMET test message (indicating receipt or non-receipt of the advisory test message from the TCACs); and
- RODBs and WAFCs record all (the above) incoming advisory and SIGMET test messages and send a SIGMET test summary table to the APAC SIGMET test focal points.

SIGMET test for volcanic ash

- 20 November, 0200 UTC:
 - VAACs issue a volcanic ash advisory test message;
 - MWOs issue a SIGMET test message (including receipt or non-receipt of the advisory test message from the VAACs); and
 - RODBs and WAFCs record all (the above) incoming advisory and SIGMET test messages and send a SIGMET test summary table to the APAC SIGMET test focal points.

SIGMET test message in the IWXXM form

2.2 MWOs that have implemented the ICAO meteorological information exchange model (IWXXM) should disseminate the SIGMET test messages in the IWXXM form in addition to disseminating the test messages in abbreviated plain language or alphanumeric form.

Test result and analysis

2.3 Four RODBs (Bangkok, Brisbane, Singapore and Nadi) and WAFC London sent the summary of bulletins received during the tests to Tokyo, the rapporteur. The combined information on the reception of the bulletins during the test for each TC (WC) and VA (WV) is shown in the Appendix 6 and 7, respectively. In this paper, the overall availability is represented by the rate of test bulletins received at least at one RODB(s) over all those expected to be reported.

2.4 Tropical cyclone (FK) and volcanic ash advisories (FV) issued at the test are shown in Appendix 1.

2.5 SIGMET test messages (LY, LV) and advisories (LK, LU) in the IWXXM form issued at the test are shown in Appendix 2.

Summary of WC SIGMET test

2.6 The total number of WC test bulletins expected to be reported during test was 50 and that received during the test was 36. The overall availability of WC test bulletins was 73.6%, which was lower than results of 2023 (79.2%). Appendix 4 shows the availability of WC test bulletins at each RODB and the total since 2009.

2.7 WC test bulletins not issued in the WC SIGMET test are shown in Appendix 3.

Summary of WV SIGMET test

2.8 The total number of WV test bulletins expected to be reported during the test was 55 including 6 Russian WV SIGMETs (UIII, UHHH, UNKL, UHMM, UEEE and UHPP). The total number of WV test bulletins received during the test was 49. The overall availability of WV test bulletins was 86%, which was lower than that of 2023 (93%). Appendix 5 shows the availability of WV test bulletins at each RODB and the total since 2009.

2.9 WV test bulletins not issued in the WV SIGMET test are shown in Appendix 3.

Follow-up activity

2.10 MWO Hong Kong, Manila, Anchorage and Honolulu were not able to participate in the Tropical Cyclone SIGMET test due to there was an active TC in the 13 November.

2.11 MWO Makassar of Indonesia was not able to participate in the Volcanic Ash SIGMET test. This was due to concerns about the activity of the Indonesian volcano on 20 November.

2.12 The IWXXM message for SIGMET test was increasing.

2.13 ROCs and RODBs support their relating NOCs which could not issue SIGMET test messages during the test period.

CONCLUSION

2.14 Both in the WC and WV SIGMET test, there were still incorrect use of the priority and wrong WMO headings of TTAAii.

2.15 Some WC and WV test messages have still not been received by all RODBs in the ASIA/PAC region. Participating States should send the test message to all RODBs and WAFCs.

2.16 Some States issued SIGMET and advisory test messages in the IWXXM form but many States are not ready to issue a test message in the IWXXM form yet.

3. ACTION BY THE MEETING

3.1 The meeting is invited to:

- a) Note the result of the SIGMET tests presented above;
- b) Discuss on the future importance of the SIGMET exchange in the region; and
- c) Discuss, if necessary, revision of the test procedure.
