1: SCOPE OF THE PLAN

This guidance document was created by the Space Vehicle Launch and Re-entry Coordination Small Working Group (SVLRC SWG) formed through a decision of the 10th Meeting of the Air Traffic Management Sub-Group of APANPIRG in October 2022. The document builds upon and replaces the regional guidance provided in the Asia/Pacific Seamless ANS Plan Version 3.0, and in the Asia/Pacific Planning Checklist for Ballistic Launch and Space Re-Entry, approved by the 29th APANPIRG and is in keeping with the provisions of UN Resolution 2222 (XXI) as amended.

Participants of the SWG consisted of representatives from Australia, China, Hong Kong China, India, Japan, New Zealand, Papua New Guinea, Republic of Korea, Singapore, Sri Lanka, Thailand, the United States, Viet Nam, and IATA.

This guidance applies to all forms of space object launch and re-entry activities (hereinafter referred to as activities), and includes commercial, State, ballistic launch, or any other space object activities that can pose a hazard to civil aviation.

The goal of this guidance is to achieve timely and efficient collection, coordination and dissemination of space object launch and re-entry information that will assist with avoiding hazards to civil aircraft and minimize interference with the normal operation of such aircraft.

This guidance should be harmonized with other ICAO regions who are working on similar efforts so that there is consistency across the globe on how space object launch and re-entry activities are coordinated and disseminated.

While space object launch and re-entry activities have existed for decades within the region, not all States and/or stakeholders are equally affected. The collection, coordination and dissemination of space object launch and re-entry activity information mainly include the following stakeholders:

- Launching State
- Launching State Appropriate ATS Authority
- Affected Appropriate ATS Authority
- Launch and Re-entry Operator
- Airspace user

To facilitate timely and orderly information dissemination, all APAC States are encouraged to identify and provide contact information for space object launch and re-entry activity coordination. These will be added to the regional Asia/Pacific Space Object Launch and Re-Entry Points of Contact list, maintained by the ATM/SG Secretariat.

1.1 Launching State Appropriate ATS Authorities should make efforts to collaborate with affected appropriate ATS authorities, operators, and other affected stakeholders to minimise potential impacts to the airspace system.

1.2 Generally, space object launch and re-entry activities take place from pre-defined locations, including States facilities or private spaceports. Launch locations should be positioned with consideration for minimal disruption to the safety and efficiency of airspace system.

The procedures below are intended to improve regional coordination efforts by complementing well-established and proven processes compliant with ICAO Annex 11 (Air Traffic Services), Doc 10088

67 (Manual on Civil-Military Cooperation in Air Traffic Management), Doc 9554 (Manual Concerning
68 Safety Measures Relating to Military Activities Potentially Hazardous to Civil Aircraft Operations),
69 and replacing existing ICAO APAC regional guidance. States conducting space object launch and re-
70 entry activities, or managing airspace affected by said activities are encouraged to create, test, and refine
71 practices and procedures that fit their needs. The State is responsible for coordination of activities
72 potentially hazardous to civil aircraft, regardless of whether they're conducted by its space launch
73 agencies, its military, or any other organization.

74 States defining consistent coordination procedures allows sufficient time for airspace managers to
75 assess the operational impact and airspace users to plan around hazardous activity. States routinely
76 conducting space object launch and re-entry activities and States managing affected airspace, are
77 encouraged to dedicate adequate resources to this planning and coordination effort to assure the
78 continued safe operation of all airspace users.

79

80

2: DEFINITIONS, ABBREVIATIONS AND ACRONYMS

2.1 DEFINITIONS

Affected Appropriate ATS Authority – the relevant authority responsible for providing air traffic services in the airspace affected by space object launch and re-entry activities conducted by the Launching State.

Airspace user – Organisations or individuals operating flights using aircraft and/or vehicles in the airspace.

Air traffic services unit. A generic term meaning variously, air traffic control unit, flight information centre or air traffic services reporting office.

Appropriate ATS authority – the relevant authority designated by the State who is responsible for providing air traffic services in the airspace concerned. This is commonly referred to as the Air Navigation Service Provider or Air Traffic Services Provider.

Launch State – a State which launches or procures the launching of a space object or a State from whose territory or facility a space object is launched. This includes any space object launch and re-entry activities.

Launch Window – the span of time during which a launch or re-entry may take place while satisfying the constraints imposed by safety and mission objectives.

NOTAM – A notice distributed by means of telecommunication containing information concerning the establishment, condition or change in any aeronautical facility, service, procedure or hazard, the timely knowledge of which is essential to personnel concerned with flight operations.

Launch and Re-entry Operator – an entity who conducts or will conduct the launch and/or re-entry of a space object and any payload.

Space object – includes component parts of a space object as well as its launch vehicle and parts thereof.

NOTE: The definitions listed above are to aid readers in understanding and applying the principles outlined in this document. They may not be universally agreed upon outside of the APANPIRG.

2.2 ACRONYMS AND ABBREVIATIONS

AFTN	Aeronautical Fixed Telecommunication Network
AIS	Aeronautical Information Service
AMHS	ATS Message Handling System
ATC	Air Traffic Control
ATS	Air Traffic Service
ATSU	Air Traffic Service Unit
FIR	Flight Information Region
NOF	International NOTAM Office
POC	Point of Contact

3: PROCEDURES FOR COORDINATING SPACE OBJECT LAUNCH AND RE-ENTRY ACTIVITIES

3.1 This section provides an overview of the general responsibilities of the Launching State, Launching State Appropriate ATS authority, Affected Appropriate ATS authority, Operator and Airspace User. All entities must coordinate to ensure the safe and efficient integration of activities into airspace systems. It is important to consider the responsibilities of each organization within their States.

3.1.1 Launching State

- Regulates space object launch and re-entry activities.
- Develops and enacts regulations ensuring that the space object launch and re-entry operator and the Launching State appropriate ATS Authority comply with the requirements in ICAO Annexe 11 for the coordination of activities potentially hazardous to civil aircraft.
- Identifies the appropriate ATS authority responsible for coordination of space activities, including identifying the proper entity to initiate NOTAM request for space object launch and re-entry activities within the FIR/s assigned to the launching State in accordance to Annex 15, Section 2.1.
- Validates the launch window and the coordinates of the extent of the airspace affected by the space object launch and re-entry activities.

Note: There are various responsible authorities within individual Launching States as far as space object coordination activities.

3.1.2 Launching State Appropriate ATS Authority

- Serve as the focal point for collecting, coordinating, and disseminating all available information relevant to space object launch or re-entry activities to affected appropriate ATS authorities and/or other affected stakeholders.
- Identify and assess potential impacts or constraints to airspace where the State is responsible for the provision of air traffic services, to ensure the compliance of the requirements in ICAO Annex 11, Section 2.19.

Note: This includes the determination for the need to establish any special use airspace (SUA), airspace restrictions or temporary withdrawal of established ATS routes to avoid hazards to civil aircraft and inform affected ATSU accordingly.

- Plot area using validated coordinates and provide a graphical representation of the polygon to affected appropriate ATS authorities for reference.
- Ensure the safe and efficient integration of space object launch and re-entry activities into the airspace system.

3.1.3 Affected Appropriate ATS Authority

- Receive and coordinate information relevant to space object launch or re-entry activities from launching state appropriate ATS authorities with other affected stakeholders.

- 158 • Identify and assess potential impacts or constraints to airspace where the State is
159 responsible for the provision of air traffic services, to ensure the compliance of the
160 requirements in ICAO Annex 11, Section 2.19.

161 *Note: This includes the determination for the need to establish any special use airspace*
162 *(SUA), airspace restrictions or temporary withdrawal of established ATS routes to*
163 *avoid hazards to civil aircraft and inform affected ATSU accordingly.*

- 164 • Plot Hazard/Danger Area

- 165 • Ensure the issuance and update of any NOTAM promulgating information on the
166 activity.

- 167 • Ensure the safe and efficient integration of space object launch and re-entry activities
168 into the airspace system.

169 3.1.4 **Operator**

- 170 • Provide tentative launch window commencement time and duration (primary and, if
171 any, backup timing and dates), and extent of airspace affected (latitude/longitude
172 coordinates), and any other necessary supporting information to the Launching State
173 Appropriate ATS Authority.

174 *Note: Once the Launching State approves an operation, the operator works with the*
175 *Appropriate ATS Authority to determine the necessary steps for coordination of*
176 *airspace and operations.*

177 3.1.5 **Airspace User**

- 178 • Undertake safety risk assessments in accordance with standard operating procedures;
179 • Comply with promulgated airspace and ATS restrictions.

180 3.2 **PRE-LAUNCH PLANNING AND COORDINATION**

181 3.2.1 Operational coordination to the Appropriate ATS Authority of affected airspace should be
182 accomplished using Aeronautical Fixed Telecommunication Network (AFTN) or ATS Message
183 Handling System (AMHS), while supplemental material should be provided via email. Ideally a
184 conference call or some other form of positive coordination should also be accomplished by the
185 Appropriate ATS Authority responsible for the airspace over the State where the activity planning
186 organization is located. States should provide group mailboxes for operational coordination.

187 *Note: This may include a list for advanced planning, including additional POCs for situational*
188 *awareness, and one for tactical event updates, such as removal once an activity is complete to reopen*
189 *the airspace. Ideally, each State has a single group email box forwarding information internally to*
190 *appropriate parties.*

191 3.2.2 The Launching State Appropriate ATS Authority responsible for coordinating space
192 object launch and re-entry activity should begin coordinating with affected appropriate ATS authorities
193 at **least 10 days (ideally 14 days)** prior to the proposed activity. The following information should be
194 included in the coordination:

- 195 • Tentative launch window commencement time and duration (primary and, if any,
196 backup timing and dates).

- 197 • Activity time of day and extent of airspace affected (latitude/longitude coordinates).

198 *Note: In cases where extent of airspace affected crosses multiple FIRs, individual*
199 *requests should be developed and sent to each impacted FIR. The appropriate ATS*
200 *authority developing requests should ensure there are shared points for airspace*
201 *affected spanning across multiple FIRs to ensure safety.*

- 202 • Identification of POC in the Launching ATS Authority.
- 203 • Identification of POC in the Affected Appropriate ATS Authority.
- 204 • Any other necessary supporting information

205 3.2.3 The Appropriate ATS authority for affected airspace should ensure planning and
206 notification are in place for all stages of the activity to include any re-entry/debris possibility, and in
207 accordance with ICAO Doc 10066. Publication of the NOTAM for all affected FIRs will be completed
208 at least seven days in advance and include the following items of information:

- 209 • Activity window duration
- 210 • Activity time of day and extent of proposed danger or restricted area (latitude/longitude
211 coordinates)

212 *Note: For ease of implementation, each danger area should be plotted with the minimum*
213 *number of coordinates to present a polygon (please refer to PANS AIM for exacts on how*
214 *the danger area is formulated). Publication of the danger area coordinates is crucial to*
215 *ensure the safety of air traffic, especially in the event of an emergency. It is therefore vital*
216 *for ATC and flight crew to have precise awareness of danger areas while managing any*
217 *inflight contingencies.*

- 218 • Any other necessary supporting information, such as affected airways, alternate
219 routings, direct routings, etc. (please see attachment A)

220 3.3 **TACTICAL LAUNCH COORDINATION**

221 3.3.1 Launching State Appropriate ATS authority should provide notice of **three days** prior to
222 the requested launch window via AMHS/AFTN to all affected appropriate ATS authorities.

223 3.3.2 Positive coordination between affected Appropriate ATS authority and Launching State
224 Appropriate ATS authority should be executed to confirm and manage the requested dates of the activity
225 **within three days, but not less than 24 hours**, of the proposed start. The definitive information should
226 be shared externally to ensure maximum efficiency of affected airspace.

227 3.3.3 After confirming coordination via AMHS/AFTN, the affected Appropriate ATS authority
228 should publish a NOTAM for the **launch “Window” with three days’ notice, but not less than 24**
229 **hours.**

230 *Note: NOTAM are published by the NOF serving the affected FIR in response to the request/direction*
231 *of the appropriate ATS authority for that FIR.*

232

233

234 **4: RE-ESTABLISHING NORMAL AIRSPACE OPERATIONS FOLLOWING THE**
235 **END OF ACTIVITIES**

236 4.1 When confirmation from the operator of the end of activities potentially hazardous to civil
237 aircraft occurs prior to the end of the coordinated launch window, the Launching State Appropriate ATS
238 Authority should notify affected appropriate ATS authorities to enable timely cessation of mitigations
239 and withdrawal of NOTAMs for all affected FIRs. Otherwise, the NOTAMs will expire as published.

240 4.2 Cancellations of launch activities at any point of time needs to be disseminated by the
241 Launching State Appropriate ATS Authority as soon as possible to all affected FIRs.

APPENDIX A: Space Object CHECKLIST

- Launch required by:
- Proposed Temporary Danger Area:
- Proposed Launch Window, including backup dates:
- Date: DD/MM/YYYY to DD/MM/YYYY Time: XX:XX to YY:YY UTC
- Proposed Definitive launch window:
- Date: DD/MM/YYYY to DD/MM/YYYY Time: XX:XX to YY:YY UTC
- Expected exact date of launch: DD/MM/YYYY

<i>Affected FIR</i>	<i>Affected AWYs</i>	<i>Affected Flights in requested Time window</i>	<i>Option 1: Suggested revised time and date</i>	<i>Option 1: Affected flights in revised time and date</i>	<i>Option 2: Suggested revised time and date</i>	<i>Option 2: Affected flights in revised time and date</i>

1. With this information, airspace managers and other State authorities are expected to assess the impact of the proposed launch or re-entry details and determine if the activities can be conducted safely. This assessment includes airspace and airways affected as well as expected traffic density during the event. Potential mitigations include rerouting of traffic around the danger area or delay of traffic to avoid the event window.
2. If adequate mitigations are available, the airspace manager, State, or designated competent authority should reply to the requester noting support. However, if adequate mitigations are not available, timely feedback to the requestor clarifying the issue and potential solutions is required. Note space missions require specific timing to meet orbital requirements. Options for modification may be limited. If needed, establishing a planning call to address concerns or clarify mission parameters is highly effective.
