ASIA/PACIFIC REGION COMBINED PBCS MONITORING REPORT

(Presented by Indonesia and Malaysia)

SUMMARY

This paper presents the aggregated monitoring report for the Asia/Pacific Region.

1. INTRODUCTION

1.1 This paper provides a summary of data link performance observed in the Asia/Pacific Region during 2025.

2. DISCUSSION

Outline

2.1 Data Link performance reports for 2025 were provided for the Flight Information Regions (FIRs) listed in **Table 1**.

2.5 For both reporting periods—January to June and July to December 2025—the 95 percent performance criterion (≤ 90 seconds) was achieved by all FIRs.

2.6 With respect to the 99.9 percent performance criterion (≤ 180 seconds), all FIRs are within the marginal range in both halves of 2025 with the sole exception of VABF during the first half of 2025, where performance fell below the required threshold. Notably, VABF demonstrated improvement in the second half of the year and achieved within 99.0 - 99.8 percent criterion.

2.7 Overall, the results indicate consistent and acceptable surveillance performance across all FIRs in 2025, with only a single, isolated non-compliance that was subsequently rectified.

2.8 **Figure 1** illustrates the Asia-Pacific (APAC) combined Required Surveillance Performance (RSP) message counts and the corresponding achievement rates for the 95 percent and 99.90 percent performance criteria over the period 2021 to 2025, presented by half-year intervals.

Figure 1: Number of RSP Message Counts and Percentage of Meeting 95% and 99.90% Criteria

2.9 Overall, the total number of RSP messages shows a general increasing trend, rising from approximately 8.6 million messages in the first half of 2021 to over 20.1 million messages in the second half of 2025. During the same period, performance against both criteria remained consistently high. The 95 percent criterion was achieved within a narrow range of approximately 98.66 percent to 98.99 percent, while the 99.90 percent criterion remained above 99.57 percent across all reporting halves.

2.10 However, it should be noted that the number of FIRs submitting RSP data varies from year to year. As such, the observed changes in total message counts and performance percentages may be influenced by variations in reporting participation and coverage, in addition to actual traffic growth or system performance. Consequently, the trends presented in Figure 1 should be interpreted with caution and are not conclusive indicators of long-term regional performance trends.

2.11 Notwithstanding this limitation, the figure provides a useful high-level indication of APAC surveillance performance stability over the reporting period.

RCP aggregated data

2.12 **Table 5** presents the aggregated Required Communications Performance (RCP240) results for all media types across all FIRs for the year 2025, covering the periods January–June and July–December 2025.

2.13 Overall, performance against both the ACP and ACTP criteria remained consistently high across all FIRs throughout 2025. In both reporting periods, all FIRs met the 95 percent criteria for ACP (≤ 180 seconds) and ACTP (≤ 120 seconds). The majority of FIRs also remained within the marginal range for the 99.90 percent criteria (ACP ≤ 210 seconds and ACTP ≤ 150 seconds), with only a few exceptions such as VVTS and WMFC for the ACP 99.90 percent criterion. Additionally, RPHI failed both of the ACP and ACTP 99.90 percent criterion. ZWWW met all the requirement throughout the year however the number of messages recorded were very small. Performance remained stable in the second half of the year, including among high-volume FIRs such as KZAK, PAZN, RJJJ, and VOMF.

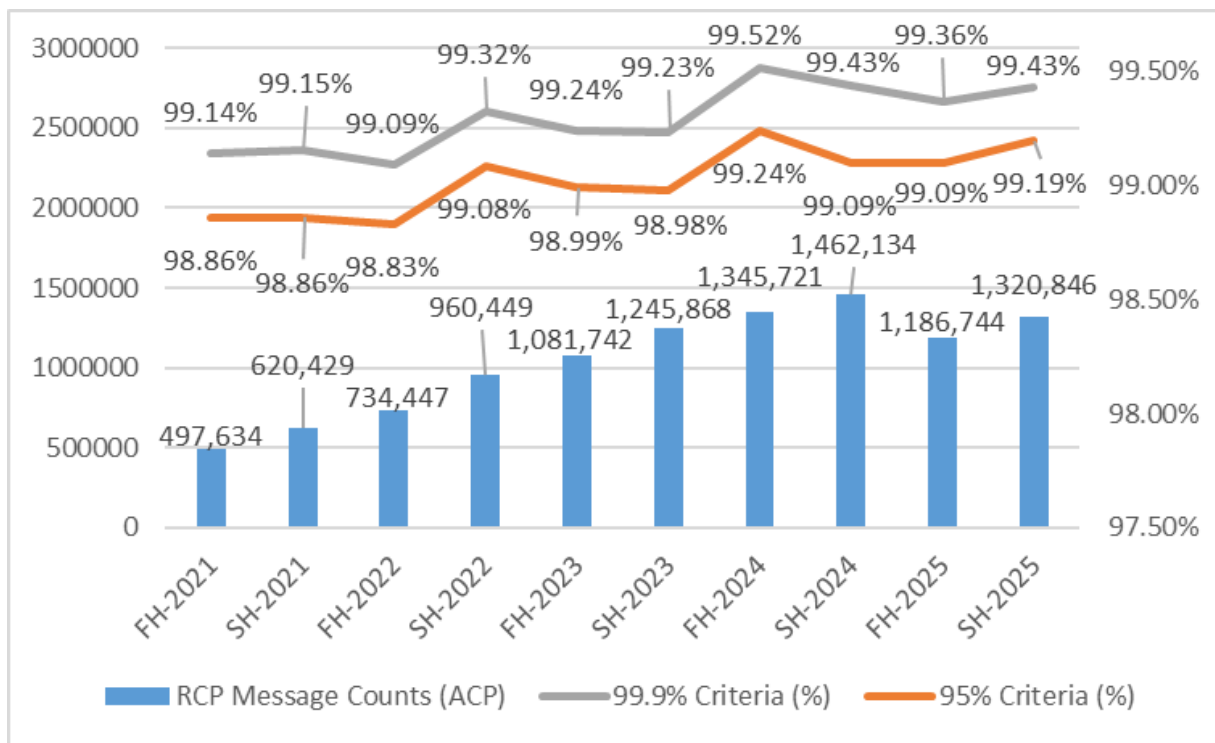

Figure 2: Number of RCP Message Counts, and Percentage Meeting 95% and 99.90% Criteria (ACP)

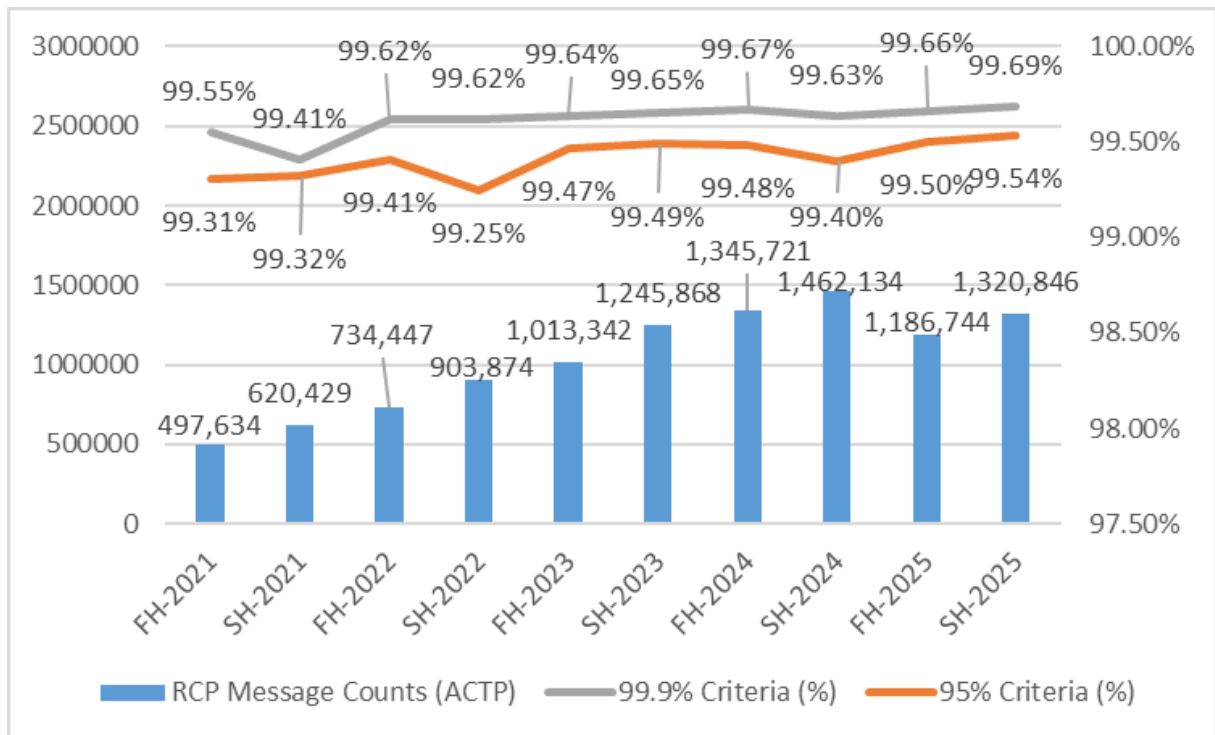

Figure 3: Number of RCP Message Counts, and Percentage Meeting 95% and 99.90% Criteria (ACTP)

2.14 **Figure 2** illustrates the combined Asia-Pacific (APAC) Required Communications Performance (RCP) message counts for ACP, together with the percentages meeting the 95 percent and 99.90 percent ACP performance criteria over the period 2021 to 2025, presented by half-year intervals. **Figure 3** presents the corresponding results for ACTP.

2.15 For ACP, total RCP message volumes increased steadily from approximately 0.5 million messages in the first half of 2021 to over 1.3 million messages in the second half of 2025, with a peak observed in the second half of 2025. Throughout the reporting period, compliance with the 95 percent ACP criterion remained consistently high, fluctuating within a narrow range of approximately 98.83 percent to 99.24 percent. Similarly, performance against the 99.90 percent ACP criterion was sustained at a high level, remaining above 99.09 percent in all reporting halves.

2.16 For ACTP, a comparable increase in message volumes was observed, rising from approximately 0.5 million messages in the first half of 2021 to around 1.3 million messages in the second half of 2025. Compliance with the 95 percent ACTP criterion remained consistently strong, within a range of approximately 99.25 percent to 99.54 percent, while achievement of the 99.90 percent ACTP criterion was maintained above 99.41 percent across the entire period.

2.17 It should be noted that the number of FIRs contributing RCP data varies between years, and therefore changes in aggregated message counts and performance percentages may be influenced by variations in reporting participation and coverage. Consequently, the trends shown in Figures 3 and 4 provide an indicative, high-level overview of ACP and ACTP performance over time and should not be interpreted as conclusive long-term trend indicators.

2.18 Overall, the figures demonstrate that high levels of RCP compliance for both ACP and ACTP were maintained throughout the period, even as communication message volumes increased.

RSP issues

2.19 **Figure 4** illustrates the distribution of RSP issues by media type for the period January to June 2025.

Figure 4: RSP Issues by Media Type in The First Half of 2025

2.20 The majority of RSP issues during this period were associated with VHF media, accounting for 184 issues (79%) of the total. Satellite (SAT) media contributed 38 issues (16%), while HF media recorded the lowest number of issues, with 11 issues (5%).

2.21 Overall, the figure indicates that RSP issues in the first half of 2025 were predominantly related to VHF communications, with comparatively fewer occurrences associated with SAT and HF media.

2.22 **Figure 5** presents the distribution of RSP issues by media type for the period July to December 2025.

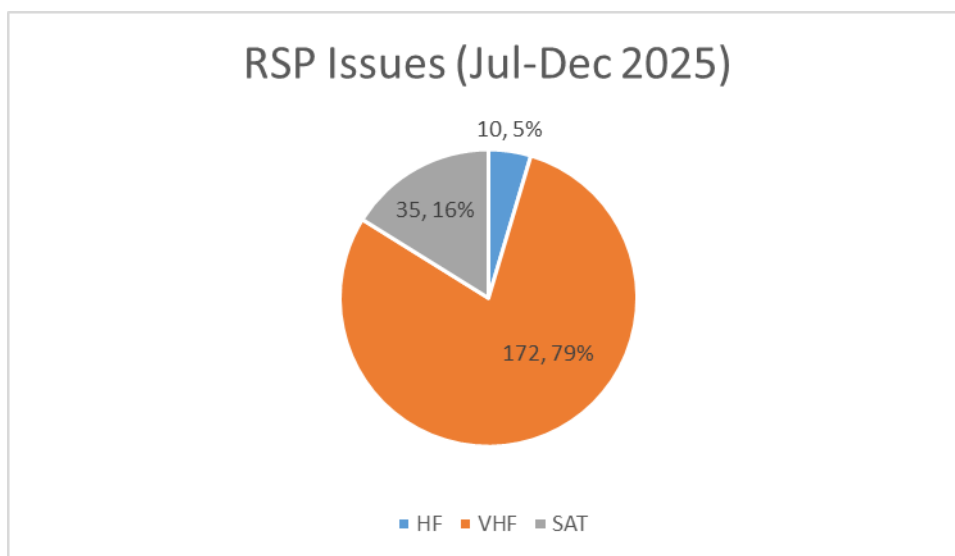

Figure 5: RSP Issues by Media Type in The Second Half of 2025

2.23 Similar to the first half of the year, VHF media remained the primary contributor to RSP issues, accounting for 172 issues (79%). SAT media accounted for 35 issues (16%), while HF media contributed 10 issues (5%).

2.24 The relative proportions of RSP issues by media type in the second half of 2025 are consistent with those observed in the first half, indicating no significant shift in the media types contributing to RSP issues across the year.

2.25 **Table 6** presents the Required Surveillance Performance (RSP180) monitoring results for the IG1 and IGW1 communication paths for the year 2025, covering the periods January–June and July–December 2025. These two designators were selected for focused analysis as IG1 and IGW1 are the most frequently occurring RGS/GES paths across all FIRs, with consistently high message counts recorded throughout the region.

2.26 For the first half of 2025, IG1-associated paths generally achieved the 95 percent criterion, although performance against the 99.90 percent criterion varied across FIRs. Several FIRs, including NZZO and WAAA, met or marginally approached the 99.90 percent requirement, while others showed under-performance, particularly in FIRs with higher message volumes. Similar performance patterns were observed for IGW1, where most FIRs met the 95 percent criterion, but a number did not fully achieve the 99.90 percent criterion.

2.27 In the second half of 2025, performance along both IG1 and IGW1 paths showed overall stability with modest improvements in some FIRs, particularly in achievement of the 99.90 percent criterion. Several FIRs, such as NZZO, RJJJ, VCCF, and WAAA, recorded improved compliance compared to the first half of the year, while others continued to exhibit localized performance shortfalls.

2.28 **Table 7** and **Table 8** present aircraft operator and aircraft type combinations that recorded RSP non-compliance across multiple FIRs during the first and second halves of 2025, respectively. The analysis includes only combinations with non-compliance recorded in more than four FIRs (out of 16) to focus on recurring, regionally significant patterns rather than isolated occurrences.

2.29 Five operator/type combinations—VJT/GL7T, AZG/B744, MAS/B38M, PAL/A321, and FDX/B77L—recorded non-compliance in more than four FIRs in both halves of 2025, indicating persistent cross-FIR occurrence across the year.

RCP issues

2.30 **Figure 6** and **Figure 7** illustrate the distribution of RCP issues by media type for the periods January–June 2025 and July–December 2025, respectively.

Figure 6: Number of RCP issues by media type in the first half of 2025

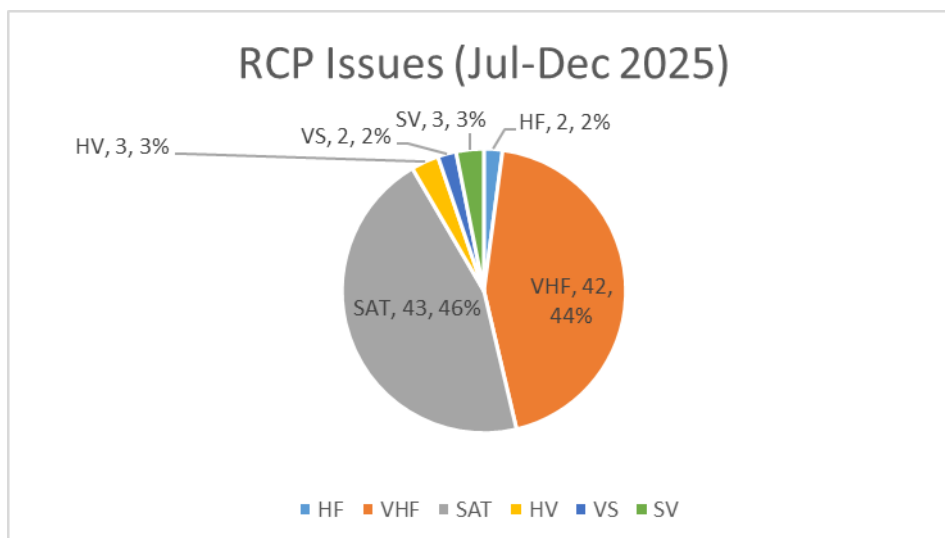

Figure 7: Number of RCP issues by media type in the second half of 2025

2.31 In the first half of 2025 (Figure 8), VHF was the predominant contributor to RCP issues, accounting for 52 issues (53%), followed by SAT with 38 issues (39%). The remaining issues were associated with VS, SV, HF, and HV, each contributing only a small proportion of the total.

2.32 In the second half of 2025 (Figure 9), VHF and SAT continued to account for the majority of RCP issues. SAT became the largest contributor with 43 issues (46%), while VHF accounted for 42 issues (44%). Issues associated with HF, HV, VS, and SV remained comparatively low and broadly consistent with the first half of the year.

2.33 Overall, the figures show that RCP issues were primarily associated with VHF and SAT media in both reporting periods, with a slight shift in relative contribution from VHF to SAT in the second half of 2025, while other media types accounted for only a minor share of observed issues.

2.34 **Table 9** and **Table 10** present aircraft operator and aircraft type combinations that recorded RCP issues in four or more FIRs during the first and second halves of 2025, respectively.

2.35 Overall, only a small number of aircraft operator/type combinations recorded RCP issues across four or more FIRs in each half of 2025, indicating that widespread cross-FIR occurrences were limited. While the specific combinations meeting the threshold differed between the two halves, QTR/B77W appeared in both periods, suggesting a persistent cross-FIR RCP issue across the year.

Other issues

2.36 Some of the collected data included format or consistency issues; States/Administrations are invited to double-check the data before submission each year.

3. ACTION BY THE MEETING

3.1 The meeting is invited to:

- a) note the information contained in this paper; and
- b) discuss any relevant matters as appropriate.
