

APAC Bi-Weekly ATFM Conference

# **ASIA-PACIFIC ATM/ATFM STATUS UPDATE**

**Published:  
7 July 2023**

## About This Document

Collaborative Decision Making (CDM) is the backbone of effective regional air traffic flow management (ATFM) and efficient air traffic management (ATM) operations. The APAC Bi-Weekly ATFM Web-Conferences are organized every two weeks and serves as a platform to enable regular information exchange and CDM among Asia/Pacific ANSPs. The web-conferences, participated by air navigation service providers (ANSPs) from States/Administrations in the region, include discussions on ATM resource status, traffic demand situation, weather outlook, expected or planned ATFM measures, and other information pertinent to air traffic operations around the region.

**This ATM/ATFM Status Update document captures key ATM status, ATFM outlook, and other pertinent information from ANSPs participating in the bi-weekly web-conferences. It is designed to provide ATM situational awareness for the region.** Information provided include, e.g., ATM status at various resources, ATS unit staffing levels, runway operations, and expected ATFM measures.

## Important Notice

- 1. The information contained herein is provided by ANSPs from participating States/Administrations only and does not necessarily include information from all States/Administrations.**
- 2. The information contained herein is for situational awareness purpose only. The document is designed to assist in the APAC Bi-Weekly ATFM Web-Conferences, serving as a framework for participating units to provide their updates. ANSPs, Aircraft Operators, and Aerodrome Operators must always check for operational information from authoritative sources (NOTAMs and other information promulgated by relevant authorities) before planning their operations.**
- 3. This document focuses on ATM resource status and ATFM outlook which may assist stakeholders in the planning of their operations in the region.**

## French Polynesia (Tahiti FIR)

Information Updated	31 July 2020
Precis	<b><i>French Polynesia has been COVID free for weeks but this is probably temporary since US tourists are accepted and can enter with minimal requirements. Domestic travel has gone back to pre-crisis level. International traffic is resuming very progressively. ATM can offer full capacity, but current capacity is managed to meet traffic demand, markedly lower than normal.</i></b>
Traffic Demand Situation	<ul style="list-style-type: none"> <li>- Domestic traffic is back to pre-COVID levels (90%).</li> <li>- International overflight: reduced by 90%</li> <li>- International incoming traffic is 70% of pre-COVID</li> <li>- VFR demand is 90% of what it was</li> <li>- Recovery assumption: Q4/2021 at the earliest</li> </ul>
Significant Weather Outlook	Nil relevant
ATM Status	<ul style="list-style-type: none"> <li>- All sectors operational, staff available</li> <li>- Full capacity available; staffing currently managed to match traffic demand as much as feasible</li> </ul>
ATFM Measure Outlook	No ATFM measure expected
COVID-19 Flight Restrictions	Prior authorization from French authorities identical to PRE COVID crisis; no remaining additional requirements.
COVID-19 Entry Restrictions	<p>New entry requirements from 15 July 2020 for passengers from Europe and USA:</p> <p>COVID testing 72h before boarding; declaration form to allow tracking during stay in French Polynesia, auto test for COVID-19 to be performed 4 days after arrival and provided to health authorities. Specific quarantine measures planned in case of positive results (none up to 1<sup>st</sup> August).</p>
Other Related Information	<ul style="list-style-type: none"> <li>- Increased level of concern for operational staff in the context of the planned reintroduction of the COVID-19 virus on the French Polynesia territory.</li> </ul>

## Malaysia (Kuala Lumpur FIR and Kota Kinabalu FIR)

<b>Information Updated</b>	<b>24 May 2023</b>
<b>Precis</b>	<b><i>CAA Malaysia ATFM Trial Implementation</i></b>
<b>Traffic Demand Situation</b>	CAA Malaysia's implementation of Air Traffic Flow Management (ATFM) measures for flights to Langkawi Airport due to increased air traffic and congestion due to two daily airspace closure for airshows. These measures aim to manage the surge in demand, ensure operational safety amidst dynamic flight patterns, and manage potential strains on airport resources effectively. Normal AAR for Langkawi is 6 and the government approved for extra flights into Langkawi that make the demand increase up to 11 per hour. Therefore, Ground Delay Program (GDP) was developed to reduce traffic congestion.
<b>Significant Weather Outlook</b>	In May, the country's weather conditions are expected to be affected by the southwest monsoon phase. During the southwest monsoon period which usually starts from mid-May to September, thunderstorms and heavy rains are expected to decrease.
<b>ATM Status</b>	Across Malaysia, our Air Traffic Service (ATS) units consistently operate at maximum capacity. However, we anticipate a scheduled downturn in arrivals at WMSA (Subang) airport throughout the period from the 14th to the 20th of June, 2023. This temporary adjustment is due to airspace restrictions stemming from planned military activities.
<b>ATFM Measure Outlook</b>	<p>On the 18 May, 2023, Malaysia embarked on an operational trial of ATFM involving Langkawi, Subang, and KLIA airports. At present, our teams are actively engaged in conducting simulations for KLIA and Subang, which necessitate managing a high volume of both domestic and international air traffic. Consequently, our ATMFU has prioritized Langkawi as a pivotal training area. This includes issuing CTOT to aircraft in order to effectively balance airport demand and capacity in light of the twice-daily airspace closures due to airshows.</p> <p>Flight schedules collected from marketing sources, the National Slot Coordination Malaysia, and/or flight clearances are used to create strategic and pre-tactical demand profiles, which are then compared to flight plans filed prior to departure.</p> <p>In the event of airspace closure, AAR was reduced to 0. Due to aircrafts arriving after the closure will result in traffic congestion, they were provided with CTOT to meet</p>

	the normal AAR in Langkawi which is 6 per hour. The capacity may drop in response to new demands or limitations from Langkawi, such as an extension of the airshow's runtime or a reduction in available bays.
<b>COVID-19 Flight Restrictions</b>	nil
<b>COVID-19 Entry Restrictions</b>	Refer <a href="https://mysafetravel.gov.my/">https://mysafetravel.gov.my/</a>
<b>Other Related Information</b>	Any other relevant information and more details on the ATM status (if necessary)

## United States (Oakland Oceanic FIR)

Information Updated	2 August 2021
Precis	<ul style="list-style-type: none"> <li>- <b>Revised domestic and international traffic data</b></li> <li>- <b>System Capacity not limited by ATC Staffing</b></li> </ul>
Traffic Demand Situation	Domestic traffic demand near pre COVID levels at most facilities. International passenger traffic remains low. High demand for cargo operations in all sectors. General Aviation volume remains near normal.
Significant Weather Outlook	Expecting an average Pacific storm forecast for summer and fall of 2021, with La Niña potentially emerging during the September-November season and lasting through the 2021-22 winter (66% chance during November-January). Western US is experiencing an unusually hot summer with record temperatures and higher wildfire potential across the region.
ATM Status	All FAA facilities are operational. Staffing at most larger facilities have returned to normal with revised cleaning procedures in place. A small number of controllers tested positive at several ATC facilities. ATC alerts occasionally issued to support facility cleaning during non-peak hours. Current staffing supports present traffic demand.
ATFM Measure Outlook	No additional ATFM measures are in place due to COVID restrictions. Decreased oceanic demand has increased opportunity to approve crew requests for routing efficiencies.
COVID-19 Flight Restrictions	Currently no FAA facility is restricting traffic due to COVID related factors. Current traffic delay status may be found at: <a href="https://www.fly.faa.gov/flyfaa/usmap.jsp">https://www.fly.faa.gov/flyfaa/usmap.jsp</a>
COVID-19 Entry Restrictions	The US has revised entry procedures. See Travel entry restrictions for specific States at the following links <a href="#">Department of State Travel Restrictions</a> and <a href="#">CDC Travel Guide</a> . Also, Several Small Island States within the Oakland FIR established additional entry restrictions. Check with their Embassy for current restrictions.
Other Related Information	The US has granted waivers to several current regulations and provided additional guidance and COVID related information at” Novel Coronavirus (COVID-19) Update” ( <a href="https://www.faa.gov/news/updates/?newsId=94991">https://www.faa.gov/news/updates/?newsId=94991</a> )
