Scope of the Document

This document provides an inventory of the documents applicable in the context of AMHS implementation in Europe.

The goal of this document is to serve as a common reference for:

- a) discussing documentary issues within AST TF and more generally EUR ICAO bodies;
- b) EUR ANSPs who need a reference list for AMHS implementation and operation.

1 Introduction

1.1 The document provides an inventory of the documents applicable in the context of AMHS implementation in Europe.

1.2 The goal of this document is to serve as a common reference:

- a) when discussing documentary issues within AST TF and more generally EUR ICAO bodies;
- b) for EUR ANSPs who need a reference list for AMHS implementation and operation.

2 Contents of the inventory

2.1 The inventory provides an exhaustive list of the documents applicable to AMHS implementation and operation:

- 1. Applicable documents referencing directly AMHS (Ann[.m])
- 2. Applicable documents indirectly or not explicitly related to AMHS (Inn[.m])
- 3. Documents in preparation and/or not officially published (Pnn[.m])
- 4. (External) base standards referenced by AMHS standards and specifications (Snn[.m])

2.2 The list in the inventory is considered as relatively complete, as far as AMHS is concerned. However, many fields of the table are still empty. A provisional observation made during the establishment of the list is that for many documents, applicability rules and dates as well as formal status are difficult to identify.

3 Applicable Documents with direct Reference to AMHS

6 Base Standards used in AMHS specifications

- **Note 1:** This table is for general information only and not to be considered exhaustive. Details of the base standards referenced in the AMHS technical provisions are specified in ICAO Document 9880
- **Note 2:** The entries included in the Table correspond to the editions of the standards as referenced in ICAO Doc 9880 and/or the EUR AMHS Manual. The ‘Publication Status’ is depicted as declared by the responsible organization. As international standards are reviewed and updated on a quite regular basis, the status of some entries is indicated as ‘withdrawn’. Nevertheless, as long as ICAO Doc 9880 and/or the EUR AMHS Manual are using the older editions of these standards as reference, the relevant entries are retained in the Table. The latest published edition of the concerned standards is indicated at the column ‘Latest Edition’ of the Table, for information but not implementation purposes.

S15	IETF	RFC 793:1981	Transmission Control Protocol		Internet Standard	Published RFCs never change. When an RFC is updated, it gets a new number. Internet Standard is the final stage, when the standard is shown to be interoperable and widely deployed. However, a new Proposed Standard may well obsolete an older Internet Standard.
S16	IETF	RFC 1006:1987	ISO Transport Service on top of TCP (TP-TCP)		Internet Standard	
S17	IETF	RFC 1122:1989	Requirements for Internet Hosts - Communication Layers		Internet Standard	
S18	IETF	RFC 2126:1997	ISO Transport Service on top of TCP (ITOT)		Proposed Standard	Proposed Standard (PS) is the first official stage, but many standards never progress beyond this level.
S19	IETF	RFC 2460:1998	Internet Protocol, Version 6 (IPv6) Specification		Draft Standard	Draft Standard is an intermediate stage that is no longer used for new standards.
S20	IETF	RFC 2849:2000	The LDAP Data Interchange Format (LDIF) - Technical Specification		Proposed Standard	
S21	IETF	RFC 4301:2005	Security Architecture for the Internet Protocol (IPsec)		Proposed Standard
