

EUR.SPT.0049	Oversight capabilities/focus area: flight time specification schemes	
<i>States should ensure that the CAA Inspectors possess the required competence to approve and oversee operators’ flight time limitations/specification schemes; in particular, those including fatigue risk management. CAAs should focus on the verification of effective implementation of processes established to meet operators’ responsibilities and to ensure an adequate management of fatigue risks. CAAs should consider the latter when performing audits of the operator’s management system.</i>		
Status	ongoing
