Table CNS II-3

ATS DIRECT SPEECH CIRCUITS PLAN

Version 0 of 2 Oct 2026, no PfA (initial baseline). 448 circuits (113 Terminal I units) in 49 States and Territories. Source file: Table CNS II-3.docx (1 Jul 2026).

For evaluation. This table was extracted from the Word file of the current edition and has not yet been verified by the responsible Officer.

EXPLANATION OF THE TABLE

Columns 1 and 2: Circuit terminal stations are listed alphabetically by the Terminal I.

Column 3: A — indicates ATS requirement for the establishment of voice communication within 15 seconds.

D indicates requirements for instantaneous communications.

Column 4: Type of service specified:

LTF landline telephone (landline, cable, UHF, VHF, satellite).

RTF radiotelephone.

Column 5: Type of circuits; Direct (DIR) or Switched (SW).

D indicates a direct circuit connecting Terminals I and II.

S indicates that a direct circuit does not exist and that the connection is established via switching at the switching centre(s) indicated in column 6.

IDD International direct dialling by public switch telephone network

Note 1.— Number of D and/or S circuits between Terminals I and II are indicated by numerical prefix, i.e. 2 D/S means 2 direct circuits and one switched circuit.

Note 2.— Pending the implementation of proper ATS voice circuits, and provided that aeronautical operational requirements are met, IDD services may be used for the ATS voice communications in low traffic areas.

Column 6: Location of switching centre(s). Alternate routing location, if available, is indicated in brackets.

Column 7: Remarks
