1	Revision of ATS route structure	South China Sea - implemented on 1 November 2001. Asia to Europe through Middle East via south of Himalayas implemented on 28 November 2002. (EMARSSH)	Established new ATS routes.	Asia to Europe through Middle East via south of Himalayas implemented on - 28 November 2002. (EMARSSH) Revision of route structure in Eastern and Western part of Europe - On going.	The development of a new ATS RNAV route network in CAR/SAM Regions - In progress.	Asia to Europe through Middle East via south of Himalayas implemented on 28 November 2002. (EMARSSH) New Middle East ATS route network - 22 December 2003.	The ATS route structure of the NAM Region is pending to be included in an updated version of the NAM ANP.	-
2	RVSM	Pacific airspace- implemented on 24 February 2000. Western Pacific airspace implemented on 21 February 2002. Hong Kong FIR and Sanya AOR implemented on 31 October 2002. Bay of Bengal and beyond - 27 November 2003.	Implementation strategy and action plan under consideration. Target date to be determined. Parts of Region falling in SAM and EUR corridor - implemented on 24 January 2002.	Western part of European Region - Implemented on 24 January 2002. Planning for expansion in Eastern part of the Region has commenced. EUR/SAM Corridor - 24 January 2002	EUR/SAM corridor - 24 January 2002. CAR/SAM Regions - 20 January 2005	Middle East Region - 27 November 2003.	Canada implemented RVSM between FL 290 to FL 410 inclusive in Northern domestic airspace (north of 57N) and transition airspace (between 52N and 57N) on 18 April 2002. United States is to implement RVSM in the domestic airspace from FL 290 to FL 410 - 20 January 2005.	Horizontal RVSM expansion in the entire NAT Region from FL 310 to FL 390 completed on 1 November 2001. Vertical expansion of RVSM throughout NAT Region from FL 290 to FL 410 - implemented on 24 January 2002.

N.B. Historical data, wherever possible, has been indicated in *italics*.

3	Establishment of regional airspace safety system performance monitoring structure.	Regional Airspace Monitoring Advisory Group was established by APANPIRG/14 in August 2003.	Under consideration.	Implemented - Financial mechanism being developed.	Brazil has been designated as monitoring agency for CAR/SAM regions for implementation of RVSM.	Middle East Central Monitoring Agency (MECMA) operated by UAE has been designated to monitor RVSM and RNP/RNAV	Canada will implement in the designated RVSM airspace.	Implemented.
4	ACAS II	<i>Mandated from 23 March 2000.</i>	<i>Mandated from 1 January 2003.</i>	<i>Mandated from 1 January 2000.</i>	Mandated from 1 January 2003.	<i>Mandated from 1 July 2001.</i>	Implemented in Canada and the United States airspace.	<i>Mandated from 31 March 2001.</i>
5	RNAV/RNP	RNP 10: 1) North Pacific and Tasman - 23 April 1998; 2) South China Sea - 1 November 2001; 3) Australia and Indonesia - 1 November 2001; 4) Bay of Bengal - November 2002. Other routes under consideration RNP 4 under development in the South Pacific area other routes under consideration	RNP5 - implemented in continental Johannesburg FIR in 1998. RNP10- implemented in Mauritius on 5 March 2003. For other routes - Under consideration.	RNAV/RNP5 implemented in ECAC area from January 1998. Implementation of precision RNAV (nearly equivalent to RNP 1) in terminal areas is planned for 2004.	EUR/SAM corridor RNP10 - implemented on 4 October 2001; Pre-operational implementation of RNP10 for routes UL302 and UL780 approved. For other routes - Under consideration.	RNP 5 Phase 1 Implemented - 14 June 2001. RNP5/RNAV Phase 2 implementation started with effect from 28 November 2002 as an ongoing process.	United States has implemented RNP in domestic and oceanic airspace since 1998. Canada is planning to implement RNP in domestic airspace in 2006. RNAV route structure in the NAM Region is under review.	MNPS implemented in 1981.

1	ATN (Subnetworks, End systems and Intermediate systems)	ATN transition plan has been developed with a target date of 2005 for ground - ground application namely ATN router and AMHS. AMHS tests are progressing. To ensure harmonization and to facilitate implementation several interface control documents (ICDs) have been developed.	ATN implementation is Under study. Focus is more on improving current circuits with long term plans for migrating to AMHS and AIDC.	ATN transition plan is being developed. Pre-operational trials are in progress. The Link 2000 programme will gradually introduce operational applications over A-G ATN on VDL2 from 2003 to 2010.	ATN initial transition plan is under review. With the REDDIG implementation (SAM Digital Network) in 2003, AMHS and AIDC implementations would be facilitated.	Current AFTN circuits are being improved for transition to ATN. Guiding principles have been prepared for ground-ground application namely AMHS and AIDC	ATN transition plan has been developed with focus on ground-ground applications. Test, development and validation phases completed. Operational implementation is under review.	Investigation of operational ATN data link scenarios in the Region with focus on air-ground applications is in progress.

2	Air-ground communication infrastructure	Further improvements are made in VHF voice in continental and terminal areas. VHF data link is used for D-ATIS, D-VOLMET and CPDLC AMSS data (for ADS and CPDLC using FANS-1/A) is used in oceanic and remote areas and AMSS voice is used for non-routine and emergency communications. SSR Mode S data link for high density airspace are being planned.	VHF Voice is provided in terminal areas. Extension of VHF coverage to en route areas is in progress in several FIRs. HF Voice is provided in most of FIRs. CPDLC based on FANS-1/A is being used.	Implementation of air-ground data link services is planned for 2002-2007. Horizontal expansion of 8.33 kHz channel spacing from 7 to 29 States implemented on 31 October 2002. Vertical expansion of 8.33 kHz channel spacing from FL 245 to FL 195 planned for 2006.	VHF voice is provided in continental and terminal areas. HF voice is provide in oceanic areas. Implementation of VDL Mode 2 to support CPDLC and D-ATIS is under study. Tests on HFDL are being conducted.	VHF voice is provided in continental and terminal areas. VHF data being studied. AMSS for data and Voice in oceanic and remote areas are used. SSR Mode S data link for high density airspace is being considered.	There are plans for AMSS for voice and ATN-compatible sub-networks such as VDL Mode 2, HFDL and AMSS to support CPDLC applications.	HF is the main communication and already saturated with difficulty of obtaining additional frequencies. Trials to use CPDLC based on FANS-1/A for routine communications are being carried out. AMSS application is being assessed.

3	Ground-ground communication infrastructure	Some of the States have implemented digital networks. AFTN based AIDC procedure is implemented by some States. Interface Control Document (ICD) for AIDC Version 2 was adopted by APANPIRG/14 Other States are also considering upgrading their networks.	Three major satellite networks have been provided in the States of the Region: namely AFISNET., SADC and CAFSAT). Another satellite network (NAFISAT) is being developed for AFI North East region. Consolidation of these networks is under consideration	Well developed. Many of the States have upgraded to digital networks.	Number of digital networks have been implemented in the Region. Interconnection of theses networks so as to provide interoperability is in progress.	Establishment of a regional satellite based digital network is under consideration. Feasibility study completed. and report submitted to MIDANPIRG/8 in September 2003.	Well developed. Canada, Mexico and United States have upgraded to digital networks.	Well developed. Many of the States have upgraded to digital networks.

1	GNSS	Transition to WGS-84 is in progress. Strategy for implementation of GNSS was updated and adopted. A check list to assist GNSS implementation developed by APANPIRG is used by States for implementation. Satellite based augmentation system (MSAS) is being developed. with a target date of commissioning with one satellite in 2004 and two satellites in 2006. GNSS is used for oceanic and remote continental areas for en- route operations and NPA as supplemental means.	Transition to WGS-84 is in progress. GNSS strategy has been adopted. Development of harmonized GNSS/NPA procedures for States of SADC completed in December 2001, and for ASECNA States in 2002. Plans for other FIRs scheduled in 2003 and 2004. SBAS test bed in cooperation with EGNOS is being implemented. GNSS is being used for oceanic and continental en- route operations.	Transition to WGS-84 is on-going. Launching of “Galileo”, a new constellation of navigation satellites was decided by the European Council on 26 March 2002 with full operation capability slated for 2008. Satellite based augmentation system (EGNOS) is being developed with a target date of commissioning in 2005. GNSS is being used for continental en route operations.	Considerable progress has been achieved in the SAM Region and efforts continue in the CAR Region for implementation of WGS-84. SBAS test bed project in cooperation with WAAS is being developed. A ionospheric model is under study in order to apply the NPA Operation with SBAS Test Bed. SBAS test bed in cooperation with EGNOS is also being developed GNSS is being used for oceanic and continental en route operations	Transition to WGS-84 is in progress. Strategy for implementation of GNSS is being developed. SBAS test bed in cooperation with EGNOS was carried out. GNSS is being used on supplemental and primary means for navigation for enroute and NPA.	Transition to WGS-84 completed in Canada and United States. In Mexico, it is in progress. The GNSS/GPS strategy has been adopted. SBAS based on the United States' wide area augmentation system (WAAS) was commissioned on 10 July 2003 for initial operating capability A GNSS approach implementation programme has been initiated by all three States and GNSS augmentation system agreements have been completed for the future expansion of the GNSS concept. GNSS is being used for oceanic and continental en-route operations	Transition to WGS-84 completed. GNSS is being used for oceanic operations.

SURVEILLANCE								
No	System	ASIA/PAC	AFI	EUR	CAR/SAM	MID	NAM	NAT
1	SSR Modes A/C and SSR Mode S	Currently SSR Modes A/C is employed. SSR Mode S being implemented in some terminal areas and high density en route.	Surveillance in most FIRs is through pilot voice position reporting. PSR and SSR Mode A/C are employed in some busy terminals and for en-route operations. An en-route aeronautical surveillance plan with SSR requirements included in the AFI FASID.	Currently SSR Modes A/C is employed. The ORCAM code management has been extended to the whole Region. SSR Mode S in some terminal areas and high density en route is planned for implementation: - basic Mode S in 2003 to 2005, - enhanced Mode S 2005 to 2007.	Currently SSR Modes A/C is employed. Use of ASTERIX protocol for SSR data sharing was established. In the near future SSR Mode S in some terminal areas and high density en route will be planned.	The Region is well covered by radars (PSR/SSR Mode A/C). SSR Mode S is planned for some terminal and high density en route areas in 2006.	En-route radar surveillance has seen substantial improvements with the upgrading of radar systems in a large part of the airspace. In several areas of the Gulf of Mexico and Northern Canada, surveillance has been restricted to position reports sent by pilots via air-ground communications. A plan to improve radar surveillance in the Gulf of Mexico is being developed.	Surveillance in most of the NAT Region is via position reports using HF Voice at approximately every 10 degrees of longitude. ADS and other data link technologies are being used for Waypoint Position Reporting
2	ADS	FANS-1/A based ADS-C is used initially for oceanic airspace and in remote areas. ADS/CPDLC services (using FANS-1/A) are operational in the PAC Region. Operational trials are being established for Southeast and West Asian Region	ADS will be used for low density, remote and oceanic airspace as well as outside SSR coverage.	ADS will be used in some parts of the Region.	ADS will be used initially for oceanic airspace and later in remote areas.	ADS will be used initially for oceanic airspace and later in remote areas and possibly as a backup to SSR in high density traffic areas in 2005.	ADS will be used in oceanic or remote areas; however, further review is needed for continental domestic airspace areas.	To improve surveillance, the regional plan specifies ADS over the ATN. Nevertheless, provisions have been made to accommodate FANS-1/A equipped aircraft.

5	Review of deficiencies	Addressed as part of the PIRG work programme. Dedicated TF established to develop appropriate management tools.	Addressed as part of the PIRG work programme. The list of deficiencies are grouped on the basis of States in addition to facility wise. Various COSCAPs are also addressing this issue. Establishment of an Aviation Safety Board is under consideration.	Addressed as part of the PIRG work programme. There are currently no outstanding formal deficiencies.	Addressed as a part of the GREPECAS work programme. Adopted a Regional Strategy in order to resolve all type of deficiencies in the air navigation field Established an Aviation Safety Board .	Addressed as part of the PIRG work programme. Dedicated Safety working Group was established .	-	Addressed as part of the PIRG work programme. There are currently no outstanding formal deficiencies.
6	Specific to the region	Guidance material to enhance aeronautical information services activities within the Region has been developed. AIS quality assurance manual has been developed.	The new larger aeroplane task force developed a strategy for future work including the evaluation of the impact on aerodromes of the AFI Region. Establishment of an appropriate body for addressing regional human resource and training issues is under consideration.	Focussing on increasing the efficiency and capacity at international aerodromes through the implementation of capacity enhancing procedures.	Human resources and training issues are being addressed. The development of an ATS and AIS Quality Assurance Programme and its associated activities are being carried out. Important steps have been given to advance into the implementation of the automated AIS system and in the development of National Data Banks. Most of the States have published the AIP in the new structure.	Formulation of a plan for development of regional training capabilities within specific training centres will be addressed through a dedicated task force.	-	Work has been initiated for the development of operational and economic performance indicators , which will be used throughout NAT Region.

ORGANIZATIONAL ISSUES

ECONOMIC ISSUES								
No	System	ASIA/PAC	AFI	EUR	CAR/SAM	MID	NAM	NAT
1	Cost benefit study, business case analysis and cost recovery system	Advice was provided to National Meteorological Service Providers about the application of ICAO's guidance and policies on cost recovery	Business case and cost benefit analysis has been carried out for SADC States for the UACC project. Similar exercise is under consideration for areas of routing AR4 (Europe to Southern Africa). Business case and cost benefit analysis is underway for the establishment of Upper ACC for East African Community	Business case and cost benefit analysis are being carried out by Eurocontrol. No ICAO Secretariat involvement.	The Secretariat assisted in the economic aspects of the study of the transitional plan (Project RLA/98/003) to CNS/ATM systems through the development and integration of a financial module. The Secretariat also participated in the organization of a Seminar in Honduras (Oct. 2002) on the economics and institutional aspects of CNS/ATM systems. GREPECAS Task Force on Institutional Aspects for CNS/ATM implementation has been reactivated.	A business case illustrative application has been developed for the region.	Business case and cost benefit analysis are being carried out by CAN/MEX/USA. No ICAO Secretariat involvement.	The feasibility of creating a common cost-recovery system for the provision of air navigation services in the northern part of the region was considered. No changes to the current system are envisaged. Cost effectiveness of implementation of new systems are studied as an ongoing exercise through the NAT Cost Effectiveness Programme.

TRAFFIC FORECASTS								
No	System	ASIA/PAC	AFI	EUR	CAR/SAM	MID	NAM	NAT
1	Traffic Forecasting Groups (TFGs)	Traffic Forecasting Group is in existence since 1991. Eleventh meeting of TFG was held in Bangkok from 30 September to 4 October 2002. Next meeting: tentatively scheduled for 2004	Traffic Forecasting Group formed in 1998. Third meeting of TFG was held in Dakar from 24 to 26 March 2003. Next meeting: tentatively scheduled either 2004 or 2005	Data developed by Eurocontrol are being used.	Traffic Forecasting Group established in 1996. Fifth meeting of TFG was held in Lima from 5 to 9 August 2002. Next meeting tentatively scheduled for 2004	Traffic Forecasting Group (TFG) created in 1998. Integration of this TFG into MIDNAPIRG is subject to approval of the Council in C/171. The fifth meeting of the TFG was held in Cairo from 15-19 January 2002. Sixth meeting: in Cairo, 16-17 October 2003	No ICAO Secretariat involvement.	NAT Forecasting Group was established in 1965.
2	Traffic forecasts	Traffic forecasts have been developed for major route groups up to the year 2015 and updated to reflect the impact of the 11 September events.	Passenger and aircraft movement forecasts have been developed for major route groups up to the year 2018.	No ICAO Secretariat involvement. Forecasting is done by Eurocontrol.	Forecasts prepared for 6 major route groups up to the year 2012 and reviewed taking into account the impact of the 11 September events.	Forecasts of major traffic flows to, from and within the Middle East region as well as aircraft movement forecasts for the city -pairs within each major traffic flow up to the year 2015 has been developed.	No ICAO Secretariat involvement.	Traffic forecasts are developed bi-annually. They were reviewed early in 2002 to reflect the impact of the 11 September events.

Legal Issues								
No	System	ASIA/PAC	AFI	EUR	CAR/SAM	MID	NAM	NAT
1	Addressing legal issues such as universal accessibility, continuity, certification and liability.	Legal issues have been raised but these are beyond the scope of regional bodies. HQ should continue to provide guidance and address and resolve them at global level.	The subject has not yet been examined by APIRG. We expect the HQ to adequately address this issue for the benefit of PIRGs.	Legal issues were discussed in the context of the Galileo programme.	Legal issues are beyond the resolution at the regional level. HQ must provide the leadership in this domain.	The question is too large and complex. MIDANPIRG did not look into the matter deep.	-	-
2	Development of an interim legal framework	An interim legal framework, the “Charter on the Rights and Obligations of States Relating to GNSS Services”, was adopted in 1998 by the 32nd Session of the Assembly in the form of Resolution A32-19, which embodies certain fundamental principles applicable to GNSS. The ICAO headquarters is pursuing its efforts to resolve the complex legal issues involved and will continue to provide guidance at global level. The Secretariat Study Group on Legal Aspects of CNS/ATM systems is expected to finalize the concept of a contractual framework for CNS/ATM systems and provide a path toward its implementation, including the consideration of an international convention. The results of the work of the Group will be reported, through the Council, to the next ordinary session of the Assembly in 2004. The security aspects concerning prevention of unlawful interference with CNS/ATM systems will be reviewed in the context of aviation security.
