(Quick Check Card)

State of play and perspectives

- The system is fully operational in France (04/2022) and Croatia (11/2024). Ongoing discussions for integration into the border management applications of Romania, Bulgaria, Slovakia, Turkey, and Moldova.
- More than 2,000 travel and identity documents are covered by the system.
- Exploring partnership with non-EU countries (outreach in America), cooperation with International Organisations (IOM, ICAO).
 - Willingness to develop it within consular services (project with Frontex in Africa).
 - Virtuous circle : the more the database is fed, the more border guards will use it.
- Raise the level of detection of fake documents on the first line.
- In those A.I. times, an artificial part could be helpful to improve the system and help to detect directly false documents (wrong background printing, wrong personalization).

Any questions ?
