

Agenda Item 3: Review of the CAR/SAM RNP Application Strategy

3.1 The meeting took note of the information provided by the RNAV/RNP Task Force expressing that for the establishment of an RNP application strategy, a well established routes network is required. Taking into account that the CAR/SAM routes network is not well established, as the RNAV routes implementation programme has not been finalized, it was considered convenient that such task force continue with the studies for the development of an RNP application strategy in the CAR/SAM Regions and present their preliminary results as soon as possible, considering the time available in the AP/ATM meeting and the priority required by the RVSM implementation programme.
