Ref.: LT 13/4.1.1 – SA402

20 June 2006

To: Mr. Jean-Marc Sansovini, Directeur Regional de l'Aviation Civile aux Antilles et en Guyane
cc: Mrs. Isabelle Monnier, Chef du Service de la Navigation Aérienne Antilles-Guyane
Mr. Chabeenanan Ramphul, Director General, Guyana Civil Aviation Authority
Ms. Marlene M.L.M. Harris, Permanent Secretary, Ministry of Transport, Communications and Tourism, Suriname
Mr. John Veira, Director, Civil Aviation

cc: Mr. Dominique Dago, Chef du Service Meteorologique de Guyane
cc: Mr. Dilip Jaigopaul, Chief Hydrometeorological Service
cc: Mr. Cornelis R. Becker, Director, Meteorological Service

Subject: **RAN CAR/SAM/3 Recommendation 13/14 – Guide for the preparation and dissemination of SIGMET messages, October 1999, Buenos Aires, Argentina**

Action
Required: As indicated in paragraphs 2 and 3

Sir,

1. I am pleased to refer to RAN CAR/SAM/3 Recommendation 13/14 – Guide for the preparation and dissemination of SIGMET messages, paragraph a), in order to submit you herewith the Seventh Edition of the Guide for the preparation, dissemination and use of SIGMET messages in CAR/SAM States/Territories, which includes amendment 73 to Annex 3 and the amendments to CAR/SAM ANP, Vol II FASID, approved the 4th May 2006.

2. In this regard, and as a follow up to paragraph b) of the referred Recommendation, I would very much appreciate your taking the pertinent actions so that this Guide is distributed among AIS, ATS and MET units and, if deemed appropriate, to the volcanoes centre of your State, in order to adopt the necessary measures to ensure that meteorologists of meteorological watch offices (MWO) make the necessary coordinations with the units and organizations involved, in order to make full use of the SIGMET guide in the preparation and dissemination of SIGMET.

3. To keep this Guide updated, I would appreciate, if this is the case, if you could review the missing information in Appendices D, E, F, G and H and return them to this Office, in order to issue the corresponding amendment or corrigendum and submit it to CAR/SAM States/Territories and international organizations.

Accept, Sir, the assurances of my highest consideration.

- B. Common abbreviations in meteorological messages
- C. FASID Table MET 3C Selected State Volcano Observatories
- D. AFTN addresses to which the Miami TCAC should transmit tropical cyclone advisories based on CAR/SAM FASID Table MET 2B
- E. AFTN addresses to which VAAC Buenos Aires and VAAC Washington should transmit volcanic ash advisories based on CAR/SAM FASID Table MET 2B and Doc 9766-AN/968, Part 5
- F. International transmission of SIGMET messages (WS/WC/WV) and special air-reports (UA) in the States/Territories of the CAR/SAM Regions based on CAR/SAM FASID Table MET 2B
- G. Contact information of the ACC, MWO, NOF and Volcano Observatories of SAM States under the responsibility of VACC Buenos Aires
- H. Contact information of the ACC, MWO, NOF and Volcano Observatories of CAR/SAM States under the responsibility of VACC Washington
- I. Cross-reference list of volcanoes and navigation aids

Explanation of terms and expressions

Aerodrome control tower (TWR): A unit established to provide air traffic control service to aerodrome traffic.

Aeronautical information publication (AIP): A publication issued by or with the authority of a State and containing aeronautical information of a lasting character essential to air navigation.

AIRMET information: Information issued by a meteorological watch office concerning the occurrence or expected occurrence of specified en-route weather phenomena, which may affect the safety of low-level aircraft operations, and which was not already included in the forecast issued for low-level flights in the flight information region concerned or sub-area thereof.

Air-report (AIREP): A report from an aircraft in flight prepared in conformity with requirements for position, and operational and/or meteorological reporting.

Approach control unit (APP): A unit established to provide air traffic control service to controlled flight arriving at, or departing from, one or more aerodromes.

Note: Established in specific aerodromes when it is necessary or convenient to create a separate unit; provides approach control to control aircrafts which approach or depart according to flight instrument rules.

Area control centre (ACC): A unit established to provide air traffic control service to controlled flights in control areas under its jurisdiction.

ASHTAM: A special series NOTAM notifying by means of specific format, information in activity of a volcano, a volcanic eruption and/or volcanic ash cloud, that is of significance of aircraft operators.

Control area (CTA): A controlled airspace extending upwards from a specific limit above earth.

Flight information centre (FIC): A unit established to provide flight information service and alerting service.

Flight information region (FIR): An airspace of defined dimensions within which information service and alerting service are provided.

International airways volcano watch (IAVW): International arrangements for monitoring and providing to aircraft of volcanic ash in the atmosphere.

International NOTAM office (NOF): An office designated by States for the exchange of NOTAM internationally.

Meteorological watch office (MWO): An office designated by States that accepted the responsibility to provide services within a flight information region (FIR), to watch meteorological conditions in that FIR.

Movement Area: The part of an aerodrome to be used for the take-off, landing and taxiing of aircrafts consisting of the manoeuvring area and aprons.

NOTAM: A noted distributed by means of telecommunication containing information concerning the establishment, condition or change in any aeronautical facility, service, procedure or hazard, the timely knowledge of which is essential to personnel concerned with flight operations.

Rescue coordination center; (RCC): A unit responsible for promoting efficient organization of search and rescue services and for coordinating the conduct of search and rescue operations within a search and rescue region.

Rescue subcentre; (RSC): A unit subordinate to a rescue co-ordination centre, established to complement the alter within a specified portion of a search and rescue region.

Restricted area: An airspace of defined dimensions above the land areas or territorial waters of a State, within which the flights of aircrafts is restricted in accordance with certain specified conditions.

SIGMET information: Information issued by a meteorological watch office concerning the occurrence or expected occurrence of specified en-route weather phenomena, which may affect the safety of aircraft operations.

SNOWTAM: A special series NOTAM notifying the presence or removal of hazardous conditions due to snow, ice, slush or standing water associated with snow, slush and ice on the movement area, by means of a specific format.

Tropical cyclone advisory centre; (TCAC): A meteorological centre designated by regional air navigation agreement to provide advisory information to meteorological watch offices regarding the position, forecast direction and speed of movement, central pressure and maximum surface wind of tropical cyclones.

Volcanic ash advisory centre (VAAC): A meteorological centre designated by regional air navigation agreement to provide advisory information to meteorological watch offices (MWO), area control centers (ACC), flight information centers (FIC), that provide services to flight information region (FIR) in their area of responsibility, to other VAAC, world area forecast centers (WAFC), relevant regional area forecast centres and international OPMET data banks, international NOTAM offices and to designated centers for the functioning of distribution systems by satellite of aeronautical fixed services (ISCS and SADIS), to provide advisory information regarding the lateral and vertical extent and forecast movement of volcanic ash in the atmosphere following volcanic eruptions.

VOLMET broadcast: Routine broadcast containing, as appropriate, current aerodrome weather reports, aerodrome forecasts and SIGMET messages for aircraft in flight.

PART 1 INTRODUCTION

1.1 General

1.1.1 The main purpose of this document is to provide guidance for standardization and harmonization of the procedures related to the aeronautical meteorological warnings, known as SIGMET information in CAR/SAM States/Territories. The guidance is complementary to the standards and recommended practices of *Annex 3 – Meteorological Service for International Air Navigation*, and to the *CAR/SAM Air Navigation Plan – ANP Basic, Volume I and FASID, Volume II, Doc 8733, Part VI – Meteorology (MET)*, regarding SIGMET provision.

1.1.2 This Guide is intended to assist meteorological watch offices (MWO) in the CAR/SAM Regions in preparing and disseminating SIGMET information based on operational requirements of CAR/SAM States/Territories.

1.1.3 Regulatory material concerning the provision of SIGMET information is contained in the following ICAO documents:

- *Annex 3 – Meteorological Service for International Air Navigation*, Part I, 7.1 and Parte I, Appendix 6, 1;
- *CAR/SAM Basic ANP*: Part I – Basic operational requirements and planning criteria (BORPC), paragraph 8.5.2; and Part VI – MET, paragraph 39;
- *CAR/SAM FASID ANP*: Part VI – MET, paragraphs 3 and 5, Tables MET 1A and MET 2B;
- *Annex 11 – Air Traffic Services*, Chapter 4, paragraph 4.2.1 and Chapter 7, paragraph 7.1.2.1;
- *Annex 15 – Aeronautical Information Services*, Chapter 5, paragraphs 5.1.1.1 u) 5.3.3 and 5.3.4;
- *Air Traffic Management, Doc. 4444*, Chapter. 9, paragraph 9.1.3.2;
- *PANS/ABC – ICAO Abbreviations and Codes, Doc. 8400*;
- *Regional Supplementary Procedures, Doc. 7030*, Part I, paragraphs 9.2.1 and 9.2.2;
- *Manual of Aeronautical Meteorological Practice, Doc 8896*, Chapter 4;
- *Handbook on the International Airways Volcano Watch (IAVW), Doc 9766-AN/968*, First edition – 2000 (available at website: <http://www.icao.int>, under ICAO Publications, Free Publications);
- *Manual on Volcanic Ash, Radioactive Material and Toxic Chemical Clouds, Doc 9691-AN/95*;
- *Manual on Coordination between Air Traffic Services, Aeronautical Information Services and Aeronautical Meteorological Services, Doc. 9377*.

1.1.4 This document has been prepared by the ICAO SAM Regional Office taking into consideration the fifteenth edition of Annex 3, published in June 2004, which includes amendment 73 to the referred Annex, the CAR/SAM ANP, Volume I, Basic and the amendment to CAR/SAM, Volume II, FASID, approved on 4 May 2006.

1.1.5 Considering that some problems have been identified so that MET units in several CAR/SAM States/Territories have available all ICAO documentation and/or the corresponding amendments, information or tables to facilitate consultations for the preparation and dissemination of SIGMET information have been extracted from relevant ICAO documents, with the commitment that this Guide will be revised and updated in a regular basis, in order to align it with ICAO documents and regional procedures and requirements.

PART 2 RESPONSIBILITIES AND COORDINATION

2.1 The responsibilities of pilots and ATS authorities in ensuring the efficient implementation of the air-reporting procedures is of vital importance, since the timely issuance of SIGMET messages is largely dependent on the receipt by MWOs of special air-reports from ATS units.

2.2 Responsibilities of pilots

2.2.1 Pilots should make special aircraft observations and other non-routine aircraft observations during any phase of the flight in accordance to the procedures of Chapter 5 of Annex 3, Part I, paragraph 5.5 and 5.6, prepare the corresponding special air-report and relay it without delay to the ATS unit.

2.3 Responsibilities of the ATS units (ACC/FIC)

2.3.1 On receipt by the ATS units of special air-reports ATS personnel should:

- a) relay them to all aircraft concerned; and
- b) compile a message and send it to their associated MWO. To assist in the compilation of this message and to ensure a standard structure, instructions have been included in Appendix 1 to the PANS-ATM, *Doc 4444*.

2.4 Responsibilities and procedures related to SIGMET information of meteorological watch offices (MWO)

2.4.1 The preparation and dissemination of information advising pilots and other aeronautical personnel about meteorological conditions which might affect the safety of international civil aviation, is an important function of meteorological watch offices (MWOs), which exist primarily to prepare and broadcast information concerning the occurrence or expected occurrence of specified hazardous en-route weather conditions which might affect the safety of aircraft (SIGMET information) and low-level aircraft operations (AIRMET information).

2.4.2 Requirements for meteorological watch offices (MWO), together with the service to be provided to flight information regions (FIR), upper flight information regions (UIR), control areas (CTA) and search and rescue regions (SRR), are described in *CAR/SAM FASID Table MET 1B – Meteorological watch offices*.

2.4.3 Based Conclusion 7/5 of the CAR/SAM/3 RAN meeting (1999), MWOs do not need to issue AIRMET messages for flight information regions (FIRs) in the CAR/SAM Regions, due to low operational density below FL 100. Consequently, no reference will be made to AIRMET information henceforth.

2.4.4 The MWO should provide SIGMET information locally to its associated ATS units, which usually are an Area Control Centre (ACC) or a Flight Information Centre (FIC), and to aerodrome meteorological offices within its own FIR. Likewise, at the international level, it should broadcast SIGMET information to the Brasilia and Washington international OPMET data banks, the ISCS and SADIS uplink stations and other MWOs, in accordance with *CAR/SAM FASID Table 2B – Exchange of SIGMET and special AIREP messages*.

2.4.5 The States should establish local procedures or make the necessary arrangements with other States so that, if an MWO is declared inoperative, its responsibilities be taken on by another. In this case, the

relevant NOTAMs should be issued and, if necessary, amendments be made to the relevant aeronautical information publications (AIPs), and inform the ICAO Regional Office concerned (NACC/SAM).

2.4.6 Since in CAR/SAM States/Territories the MWO are normally not separated from aerodrome meteorological offices, the meteorological authority concerned shall ensure that the MWO obligations and responsibilities are clearly defined and assigned, corresponding operational procedures are established and required meteorological staff should be trained accordingly to their respective functions.

2.4.7 In addition, the MWOs should be adequately equipped. Normally the MWOs use meteorological satellite data and meteorological radars; to the extent required by the MET authority, forecasts prepared by world area forecast centres (WAFC); and special air-report. The latter being an important source of data for the preparation of SIGMETs in most CAR/SAM States.

PART 3 SIGMET INFORMATION

3.1 Objective of SIGMET Information

3.1.1 The purpose of SIGMET information is to advise pilots about the occurrence or expected occurrence of en-route weather phenomena which may affect the safety of air operations. SIGMET information is prepared in accordance with the standards and recommended practices of Chapter 7 and Appendix 6 to Annex 3, strictly following *Table A6-1 – Template for SIGMET and AIRMET messages and special air-reports* of Appendix 6 of the referred Annex.

3.1.2 **Appendix A** includes an abstract of *Table A6-1 – Template for SIGMET and AIRMET messages and special air-reports*.

3.1.3 Based on the referred template, only one of the following phenomena, shall be included in a SIGMET message, using the abbreviations as indicated below:

METEOROLOGICAL PHENOMENA <i>(Abstract from Annex 3, Fifteenth edition, July 2004)</i>	ABBREVIATIONS
---	----------------------

a) Subsonic cruising levels (SIGMET):

Obscured thunderstorm	OBSC TS
Embedded thunderstorm	EMBD TS
Frequent thunderstorm	FRQ TS
Squall line thunderstorm	SQL TS
Obscured with hail thunderstorm	OBS TS GR
Embedded with hail thunderstorm.....	EMBD TS GR
Frequent, with hail thunderstorm	FRQ TS GR
Squall line with hail thunderstorm	SQL TS GR
Tropical cyclone with 10-minute mean surface wind speed of 63 km/h (34 kt) or more y 10 minutos de duración.....	TC (+ cyclone name)
Severe turbulence	SEV TURB
Severe icing	SEV ICE
Severe icing due to freezing rain	SEV ICE (FZRA)
Severe mountain wave.....	SEV MTW
Heavy duststorm.....	HVY DS
Heavy sandstorm	HVY SS
Volcanic ash	VA (+ volcano name, if known)

b) At transonic levels and supersonic cruising levels (SST SIGMET:)

Moderate turbulence.....	MOD TURB
Severe turbulence	SEV TURB
Isolated cumulonimbus	ISOL CB
Occasional cumulonimbus.....	OCNL CB
Frequent cumulonimbus	FRQ CB
Hail	GR
Volcanic ash	VA (+volcano name, if known)

3.2 Types of SIGMET

3.2.1 Format of *Table A6-1 – Template for SIGMET and AIRMET messages and special air-reports* of Annex 3 includes all weather phenomena; however, it is convenient to distinguish among the three types of SIGMET, as follows:

- SIGMET for en-route weather phenomena related to TS, CB, TURB, ICE, MTW, DS, SS y GR (WS);
- SIGMET related to volcanic ash clouds (WV) ; and
- SIGMET related to tropical cyclones (WC).

3.3 Structure of SIGMET messages (WS)

3.3.1 Header of the report:

- In accordance with AFTN standardized procedures (Annex 10, Volume II), “**ZCZC**” signal indicating the beginning of the message should always be included;
- Second line includes the message priority Indicator “**FF**”, followed by AFTN addressees of the national or international message, based on CAR/SAM FASID Table MET 2B.
- The following line includes the day of the month and hour of the SIGMET issuance, which will be not more than 6 hours, and preferably not more than 4 hours, before the expected time of occurrence of the phenomenon for which the SIGMET is issued, followed by the AFTN address of the MWO originating the SIGMET.
- The following line corresponds to WMO abbreviated header, which consists of the following three groups:

T₁ T₂ A₁ A₂ii CCCC YYGGgg [CCx]

Group **T₁ T₂ A₁ A₂ii** is the bulletin identification for the SIGMET message, constructed as follows:

T₁ T₂	Message type designator	WS – for SIGMET WV – for SIGMET related to volcanic ash clouds WC – for SIGMET related to tropical cyclones
A₁ A₂	State or Territory designator	Assigned in accordance with Table C1, Part II of Manual on the Global Telecommunication System, Vol. I – Global Aspects (WMO – No. 386)
ii	According to paragraph 2.3.2.2, Part II of Manual on the Global Telecommunication System, Vol. I – Global Aspects (WMO – No. 386), used to indicate if the message is distributed on a global, interregional, regional or national basis.	

CCCC is the ICAO location indicator of the office originating the message (MWO)

YYGGgg corresponds to the date/time group of preparation of the message, where YY is the day and GGgg the hour (GG) and minutes (gg) UTC.

The group **CCx** shall be used only when sending a correction of a SIGMET, which has already been transmitted; the third letter “x” takes the value A for the first correction, B for the second correction, etc. In this, the MWOs shall try to minimize the corrections of the SIGMETs, taking into account their importance to the flight planning including in-flight re-planning.

3.3.2 An example of the header of a SIGMET message is given below (WS):

ZCZC
 FF SLZZMAMX SCZZMAMX MDSDYMYX SGZZMAMX SPZZMAMX SUZZMAMX
 SBBRYZYX KWBCYMYX EGZZMSAM
 251022 SABEYMYX
 WSAG31 SABE 251002

Through AFTN, a message with FF priority, was issued to Bolivia, Chile, Dominican Republic, Paraguay, Peru, Uruguay, Brasilia International OPMET data bank and to ISCS and SADIS uplink stations (issued to SADIS by a State of the SAM Region), on the 25th of the month at 10:22 UTC, by the MWO of Aeroparque/Jorge Newbery, SIGMET type, neither related to volcanic ash nor to tropical cyclones, from Argentina, [31(ii) standardized number for SIGMET], prepared by the MWO of Aeroparque/Jorge Newbery on the 25th of the month at 10:00 UTC.

3.4 SIGMET Format

3.4.1 Following Table A6-1 – Template for SIGMET and AIRMET messages and special air-reports, SIGMET shall be prepared according to the following sequence:

3.4.2 Location Indicator FIR/CTA (Mandatory)

3.4.2.1 ICAO Location indicator of the ATS unit serving the FIR, which corresponds to column 4 of CAR/SAM FASID Table MET 1B.

Example:

ZCZC
 FF SLZZMAMX SCZZMAMX MDSDYMYX SGZZMAMX SPZZMAMX SUZZMAMX SBBRYZYX
 KWBCYMYX EGZZMSAM
 251022 SABEYMYX
 WSAG31 SABE 251002
SAEF

... issued for the flight information region (FIR) EZEIZA.

3.4.3 Identification and sequence number of the message (Mandatory)

3.4.3.1 The SIGMET serial number corresponds to the number of SIGMET messages issued for the flight information region (FIR) starting at 0001 UTC of the day concerned. Those messages containing SIGMET information for subsonic aircraft shall be identified as “SIGMET” and those containing SIGMET information for supersonic aircraft shall be identified as “SIGMET SST”. Independent groups of serial numbers shall be used for “SIGMET” and “SIGMET SST” messages. This numbering shall be correlative during each day of issuance and starting again at 00.00 UTC of each day in which such information is issued.

Diagram of sequence and serial numbers of SIGMET messages issued by a MWO

Example:

```
ZCZC
FF SLZZMAMX SCZZMAMX MDSZYMYX SGZZMAMX SPZZMAMX SUZZMAMX
SBBRYZYX KWBCYMYX EGZZMSAM
251022 SABEYMYX
WSAG31 SABA 251002
SAEF SIGMET 5
```

being the fifth SIGMET issued for that FIR on the 25th.

3.4.3.2 Concerning the serial numbers for SIGMET messages, it should be taken into account that in case of the occurrence or expected occurrence of two meteorological phenomena in the same day, at different hours might require the issuance of SIGMET messages, the SIGMET corresponding to the second significant phenomenon should continue with the next serial number of the SIGMET of cancellation of the first phenomenon, as shown in the following graphic:

3.4.4 Period of validity and MWO location indicator originating the SIGMET (Mandatory)

- The period of validity of a SIGMET with **ddhhmm/ddhhmm** format, should not be more than 4 hours (*CAR/SAM ANP, Basic, Part VI – MET*);
- ICAO location indicator of the MWO originating the message followed by a hyphen (-) for separation, (column 2 of CAR/SAM FASID Table MET 1B);

Example:

```
ZCZC
FF SLZZMAMX SCZZMAMX MDSYMYX SGZZMAMX SPZZMAMX SUZZMAMX
SBBRYZYX KWBCYMYX EGZMSAM
251022 SABEYMYX
WSAG31 SABE 251002
SAEF SIGMET 5 VALID 251020/251400 SABE-
```

...valid since 10:20 UTC until 1400 UTC of day 25 prepared, originated by Aeroparque Jorge Newbery MWO.

3.4.5 Location indicator and name of the FIR/CTA for which the SIGMET is issued (Mandatory)

- Location indicator and name of the FIR/CTA for which the SIGMET is issued (columns 3 and 4 respectively of CAR/SAM FASID Table MET 1B).

Example:

```
ZCZC
FF SLZZMAMX SCZZMAMX MDSYMYX SGZZMAMX SPZZMAMX SUZZMAMX
SBBRYZYX KWBCYMYX EGZMSAM
251022 SABEYMYX
WSAG31 SABE 251002
SAEF SIGMET 5 VALID 251020/251400 SABE-
SAEF EZEIZA FIR
```

... for EZEIZA FIR.

3.4.6 Description of the meteorological phenomenon (Mandatory)

3.4.6.1 SIGMET messages shall be prepared in abbreviated plain language using ICAO abbreviations, *Doc 8400/5 PANS/ABC - ICAO Abbreviations and codes* and numerical values of self-explanatory nature. **Appendix B** presents and abstract of *Doc 8400/5* with the abbreviations commonly used in meteorological messages.

Example:

```
ZCZC
FF SLZZMAMX SCZZMAMX MDSYMYX SGZZMAMX SPZZMAMX SUZZMAMX SBBRYZYX
KWBCYMYX EGZMSAM
251022 SABEYMYX
WSAG31 SABE 251002
SAEF SIGMET 5 VALID 251020/251400 SABE-
SAEF EZEIZA FIR SEV TURB OBS AT 0955Z SAZM FL210/270 MOV E 25KMH WKN
```

... informing that severe turbulence was observed at 09:55 UTC above the airport of Mar del Plata between flight levels 210 and 270, is moving towards the east at 25 km/h and is weakening.

*Note.- For changes in intensity the abbreviations “**INTSF**” (intensifying) or “**NC**” (no change) are used, as appropriate.*

3.4.6.2 SIGMET messages shall contain the information required, as necessary, and in the order indicated in the referred template. Value ranges and resolutions for the numerical elements contained in SIGMET messages are shown in *Table A6-4 of Annex 3*, included as Attachment to Appendix C.

3.4.7 AFTN Procedure to indicate the end of the message

3.4.7.1 Afterwards, and as a standardized AFTN procedure (Annex 10, Volume II) to indicate the end of the message, the following should be included:

- at the end of the text, the sign “=” to indicate the end of the SIGMET message
- in a separate line and to indicate the end of the message, the end of message signal represented by letters **NNNN**, should be included

Example:

```
ZCZC
FF SLZZMAMX SCZZMAMX MDSYMYX SGZZMAMX SPZZMAMX SUZZMAMX SBBRYZYX
KWBCYMYX EGZZMSAM
251022 SABEYMYX
WSAG31 SABE 251002
SAEF SIGMET 5 VALID 251020/251400 SABE-
SAEF EZEIZA FIR SEV TURB OBS AT 0955Z SAZM FL210/270 MOV E 25KMH WKN=
NNNN
```

3.4.8 Cancellation of SIGMET messages

3.4.8.1 When the phenomena originating the SIGMET is no longer occurring or no longer expected in the area, a cancellation of SIGMET should be issued (CNL SIGMET).

3.4.8.2 The issuance of the cancellation of SIGMET, should be numbered with the next number of the last SIGMET issued, as indicated in the following example:

Diagram and example of a cancellation of SIGMET message issued by a MWO

Example:

```
ZCZC
FF SLZZMAMX SCZZMAMX MDSYMYX SGZZMAMX SPZZMAMX SUZZMAMX SBBRYZYX
KWBCYMYX EGZZMSAM
251022 SABEYMYX
WSAG31 SABE 251002
SAEF SIGMET 5 VALID 251020/251400 SABE=
SAEF SIGMET 6 CNL SIGMET 5 VALID 251020/251400 SABE=
NNNN
```

3.4.9 Special cases in the preparation of SIGMET messages

3.4.9.1 Note 8 at the end of *Table A6-1 – Template for SIGMET and AIRMET messages and special air-reports* of Annex 3, indicates that only one meteorological phenomena included in the list should be selected and included in each SIGMET.

3.4.9.2 However, in some cases due to the extension of a FIR, one or more meteorological phenomena, included in the list shown in paragraph 3.1.3 of this Guide, could be observed or the occurrence of another phenomenon could be forecasted.

3.4.9.3 As specified in paragraph 3.1.1, SIGMET are used to advise pilots about the occurrence or expected occurrence of en-route weather phenomena which may affect the safety of air operations and, in this sense, all of them should be reported.

3.4.9.4 As an example, a situation similar to that shown in the figure below could be presented:

3.4.9.5 In a FIR (TAZP*) at a particular hour, an area of severe turbulence is observed, which is affecting two aerodromes TACA* and TACE*. Subsequently, three hours after the occurrence of the first significant weather phenomenon, another area of severe turbulence is observed, affecting another aerodrome TACU*, not associated with the phenomenon that originated the first turbulence and, at the same time, the occurrence of an area with severe icing is forecasted, which will affect two aerodromes located in another area TACO* and TACI*.

* Fictitious location.

3.4.9.6 In this case, the following inconveniences were presented:

- a) all these weather phenomena influenced against flight safety and should be informed; and
- b) should be distinguished from each other so that, with the current use of computer systems to search and display OPMET information, these phenomena could be presented in the screens without interfering with each other.

3.4.9.7 Considering the above, and in order to provide serial numbers for the particular identification of each phenomena, column 3 of section “Identification” of *Table A6-1 – Template for SIGMET and AIRMET messages and special air-reports*, shown below, should be taken into account.

Element as specified in Chapters 5 and 7	Detailed content	Template				Examples
		SIGMET	SIGMET SST ¹	AIRMET	SPECIAL AIR-REPORT ²	
Identification (M)	Message identification and sequence number ⁵ (M)	SIGMET n [nn]	SIGMET SST [nn]n	AIRMET [nn]n	ARS	SIGMET 5 SIGMET A3 SIGMET SST 1 AIRMET 2 ARS

3.4.9.8 To report several weather phenomena occurring simultaneously within a same FIR, the format **SIGMET n [nn]** being **n** a sequence letter for the identification of each weather phenomenon and **[nn]** the identification number of the message indicating the sequence according to paragraph 3.4.3.1.

Example:

1) Commencement of SIGMET sequence

- a) SIGMET issued at the occurrence of the first weather phenomenon affecting, in this case, a zone of the FIR EZE, particularly airport SAZM

PART 4 SIGMET RELATED TO VOLCANIC ASH (WV) AND TO TROPICAL CYCLONES (WC)

4.1 General

4.1.1 In the special case of SIGMET messages concerning volcanic ash (WV) and tropical cyclones (WC), elements such as the trajectory forecast, distinguish the type of SIGMET and consider other national and international addressees, should be included.

4.1.2 In order to assist MWOs in the preparation of the forecast contained in tropical cyclone SIGMET messages, the Miami tropical cyclone advisory centre (TCAC) has been designated to prepare and send the required advisory information to the CAR/SAM MWOs under its responsibility. *CAR/SAM FASID Table MET 3A* shows the area of responsibility of the TCAC and the MWOs to which advisory information should be sent. Advisory information should be issued concerning tropical cyclones that have an average ground wind speed equal to or above 63 Km/h (34kt) for a period of 10 minutes.

4.1.3 In order to assist MWOs in the preparation of the forecast contained in volcanic ash SIGMET messages, the Buenos Aires and Washington volcanic ash advisory centres (VAACs) have been assigned the task of preparing and sending the required advisory information to the CAR/SAM MWOs and ACCs under their responsibility, after volcanic ash clouds have been reported/detected. *CAR/SAM FASID Table MET 3B* describes the area of responsibility of the VAACs, MWOs and ACCs to which the advisory information should be sent.

4.1.4 *ICAO Doc. 9766 – AN/968, Handbook on the international airways volcano watch (IAVW), Second edition – 2004*, describes in detail the general measures and operational procedures to be taken by Area Control Centres (ACC), Flight Information Centres (FIC), International NOTAM Offices (NOF), Meteorological Watch Offices (MWO) and Volcanic Ash Advisory Centres (VAAC), for the dissemination of information on volcanic eruptions and the resulting volcanic ash clouds, which might affect the routes used by international flights, as well as those measures to be taken prior to a volcanic eruption.

4.1.5 Additionally, *ICAO Doc. 9691-AN/954 - Manual on volcanic ash, radioactive material and toxic chemical clouds, First edition – 2001*, complements the above referred Document, with procedures and emergency plans to mitigate the effects of volcanic ash clouds.

4.1.6 *CAR/SAM FASID Table MET 3C*, included as **Appendix C**, shows the selected State volcano observatories for direct notification of significant pre-eruption volcanic activity, a volcanic eruption and/or volcanic ash in the atmosphere and the VAACs, MWOs and ACCs to which the observatories should sent the notification, which is included in.

4.1.7 States volcano observatories should send the following information to their associated ACCs, MWOs and VAACs:

- a) significant pre-eruption volcanic activity: the date/hour (UTC) of report; name and, if known, number of the volcano; location (latitude/longitude); and description of volcanic activity; and
- b) volcanic eruption: the date/hour (UTC) of report and time of eruption (UTC), if different to the time of the report; name and, if known, number of the volcano; location (latitude/longitude); and description of the eruption, including whether an ash column was ejected and, if so, an estimate of height of ash column and the extent of any visible volcanic ash cloud, during and following an eruption.

Note.- Pre-eruption volcanic activity in this context means unusual and/or increasing volcanic activity which could presage a volcanic eruption.

4.1.8 On receipt of information on volcanic eruption or volcanic ash cloud from the volcano observatory, ACC/FIC, VAAC and/or any other source, the MWO should take the following measures:

- notify the designated VAAC on the observation of a volcanic eruption or volcanic ash clouds in order to provide advice on volcanic ash trajectories in the FIR for which the State is responsible, provide the relevant available details and request advice on the extent and trajectory of the volcanic ash. Special air-reports on pre-eruption volcanic activity, volcanic eruption or the presence of volcanic ash clouds received from a MWO, should specifically be transmitted to their associated VAACs, WAFC London, WAFC Washington and International OPMET databank of Vienna;
- advise the associated ACC/FIC as soon as possible and provide regular information based on the advisory received from the VAAC on the horizontal and vertical extent of the cloud and the trajectory of the cloud; and
- issue a SIGMET message on volcanic ash with a period of validity of six hours, including an “outlook” giving information concerning the trajectory of volcanic ash cloud for up to twelve hours beyond the period of validity, on the basis of the advisory information provided by the concerned VAAC. Include in the list of SIGMET addresses all the VAACs, the WAFC London and WAFC Washington, the International OPMET databank of Vienna and the International OPMET databanks of Brasilia and Washington in charge. Keep continuous coordination with the associated ACC/FIC and NOTAM International Office (NOF), to ensure the standardization in the issuance and contents of the SIGMET and ASHTAM or NOTAM related to volcanic ash clouds.

4.1.9 In the event that an aerodrome meteorological office becomes aware of a pre-eruption activity, a volcanic eruption or a volcanic ash cloud from any source, this information should be passed immediately to the associated MWO for its onward transmission to the ACC/FIC.

4.2 Tropical cyclone and volcanic ash advisories

4.2.1 Responsibilities of the Miami Tropical Cyclones Advisory Centre

4.2.1.1 The Miami TCAC will take the necessary provisions to monitor the development of tropical cyclones based on *CAR/SAM FASID Table MET 3A*, using geostationary and polar-orbiting satellite data, radar data and other meteorological information. Additionally, advisory information concerning the position of the cyclone centre, its direction and speed of movement, central pressure and maximum surface wind near the centre, will be issued in abbreviated plain language, to the MWOs in its area of responsibility, other TCACs, whose areas of responsibility may be affected, and the World Area Forecast Centres (WAFC) of London and Washington, the international OPMET data banks of Brasilia and Washington, ISCS and SADIS.

4.2.1.2 Advisory information on tropical cyclones should be prepared in accordance to the template presented in *Table A2-2 - Template for advisory message for tropical cyclones* of Appendix 2 of Annex 3.

4.2.1.3 Updated advisory information will also be issued to the MWOs for each tropical cyclone, as necessary, but at least every six hours, in accordance with the requirements of *CAR/SAM FASID Table MET 3A*. **Appendix D** includes the AFTN addresses to which the Miami TCAC should transmit tropical cyclone advisories based on the referred Table.

4.2.1.4 Advisory information on tropical cyclones should be prepared based on Table A2-2 - *Template for advisory message for tropical cyclones* of Annex 3.

Example A2-2: Advisory message for tropical cyclones

4.2.2 Responsibilities of the Buenos Aires and Washington Volcanic Ash Advisory Centres

4.2.2.1 The associated VAAC will activate the volcanic ash numerical trajectory/dispersion model in order to forecast the movement of any volcanic ash “cloud” which has been detected or reported, will prepare and issue advisory information to the MWOs, ACCs, FICs, other VAACs whose areas of responsibility may be affected, the World Area Forecast Centres (WAFS) of London and Washington, the international OPMET data banks of Brasilia and Washington, ISCS, SADIS and to airlines requiring advisory information through the AFTN address provided specifically for this purpose.

4.2.2.2 In order for the VAACs to begin watching for volcanic ash based on satellite data and volcanic ash trajectory forecasts, MWOs should immediately report to the VAAC on the occurrence of volcanic eruptions and volcanic ash clouds observed in the FIRs under their responsibility. In particular, special air-reports on volcanic activity or volcanic ash clouds received at the MWOs should be immediately transmitted to the corresponding VAAC.

4.2.2.3 Updated advisory information will be issued as necessary, but at least every six hours until such time as the volcanic ash “cloud” is no longer identifiable from satellite data, no further reports of volcanic ash are received from the area, and no further eruptions of the volcano are reported and transmit it according to the requirements of *CAR/SAM FASID Table MET 3B*. **Appendix E** includes the AFTN addresses to which VAAC Buenos Aires and VAAC Washington should transmit volcanic ash advisories, based on the referred Table.

4.2.2.4 The advisory information on volcanic ash issued in abbreviated plain language, using approved ICAO abbreviations and numerical values of self-explanatory nature, should be in accordance with the template shown in *Table A2-1 – Template for advisory message for volcanic ash* of Annex 3.

4.2.2.5 When no approved ICAO abbreviations are available, English plain language text, to be kept to a minimum, should be used.

4.2.2.6 An example of an advisory message for volcanic ash, abstracted from Annex 3, is shown below.

4.3 Preparation and format of SIGMET messages related to tropical cyclones (WC) and volcanic ash (WV)

4.3.1 Only the information differing from that used for the preparation of SIGMET (WS), which is shown in paragraph 3.3.1, will be included.

4.3.2 Header of the message

- ...
- The following line includes the day of the month and hour of the SIGMET (WV and WC) issuance, which will be up to 12 hours prior to the commencement of the period of validity, or as soon as possible if advance warning of the existence of these phenomena is not available. These SIGMET should be updated at least every 6 hours.
 - For SIGMET on volcanic ash and tropical cyclones, the group **T₁T₂A₁A₂ii** of WMO abbreviated header should be used, respectively, as follows:
 - **T₁T₂** should always be **WV** for SIGMET on volcanic ash;
 - **T₁T₂** should always be **WC** for SIGMET on tropical cyclones;
 - **A₁A₂** corresponds to the WMO State geographical designator; and
 - **ii** should always be number **31**.
- ...

4.3.3 Period of validity of the message

4.3.3.1 In accordance with CAR/SAM ANP, Vol. I, Basic, the period of validity of SIGMET (WV and WC) with format **ddhhmm/ddhhmm.**, should be six hours and an outlook should be added for an additional period of up to 12 hours, with the expected trajectory of volcanic ash clouds and the positions of the tropical cyclone centre, respectively.

4.3.4 Description of the phenomenon

4.3.4.1 Description of the tropical cyclone

4.3.4.1.1 *Table A6-1 Template for SIGMET and AIRMET messages and special air-reports of Annex 3, includes several ways to refer to the position of the phenomena described in the message.*

- the abbreviation [TC] followed by the name of the tropical cyclone [**GLORIA**]; time of observation (Z) [**OBS AT1600Z**]; a latitude central point (L_a) followed by 4 characters and one for longitude (L_o) followed by 5 characters indicating the degrees and minutes [**N2706 W07306**], followed by the cloud top cumulonimbus [**CB TOP**] and by the flight level [**FL500**]; continuing with the abbreviation “**WI**” indicating the distance in nautical miles from the centre of the cyclone [**WI 150NM OF CENTRE**]; direction and speed of the expected movement and changes [**MOV NW 10KT NC**], followed by the time of the outlook position centre of the cyclone in latitude and longitude points [**FCST 2200Z TC CENTRE N2740 W07345**];

In a separate line the Outlook received from the Miami TCAC is included, starting with the abbreviation **OTLK**.

Example of SIGMET on tropical cyclone:

```
ZCZC
FF ...
...
...
YUCC SIGMET 3 VALID 251600/252200 YUDO-
YUCC AMSWELL FIR TC GLORIA OBS AT 1600Z N2706 W07306 CB TOP FL500 WI 150NM OF

NNN
```

Third SIGMET message issued for the AMSWELL flight information region (identified by YUCC* Amswell area control centre), by the meteorological watch office Donlon/International* (YUSO*) since 0001 UTC; the message is valid from 1600 UTC until 2200 UTC on the 25th of the month; the tropical cyclone Gloria was observed at 1600 UTC centres at 27 degrees 06 minutes north and 73 degrees 06 minutes west with cloud top cumulonimbus reaching flight level 500 up to a distance of 150 nautical miles from the centre; the tropical cyclone is expected to move towards the northeast at 10 knots with no changes in intensity; the outlook position of the centre of the tropical cyclone at 2200 UTC is expected to be 27 degrees 40 minutes north and 73 degrees 45 minutes west.*

Outlook

It is expected that on the day 26 of the month at 0400 UTC the centre of the cyclone will be located at 28 degrees 30 minutes north and 74 degrees 30 minutes west, and at 29 degrees 12 minutes north and 75 degrees 30 minutes west, respectively.

4.3.4.2 Description of a message with information about an eruption

4.3.4.2.1 In order to ensure an immediate transmission of the initial information to aircraft, the first SIGMET on volcanic ash issued, may only contain information indicating that a volcanic ash cloud has been notified, together with the date, time and location. It is not necessary to wait for additional detailed information, not even for information regarding SIGMET “outlook”. This information could be included in subsequent SIGMET as the corresponding volcano observatory provides additional information or the associated VAAC provides advisory information.

Diagram of information feedback between the associated VAAC and the MWO for the issuance of SIGMET on volcanic ash "with outlook"

Example of the first SIGMET on volcanic ash:

Outlook:

It is expected that the 21st of the month at 2300 UTC the volcanic ash cloud is located approximately in an area delimited by the following points: 16 degrees south and 78 degrees 6 minutes east, 16 degrees 42 minutes south and 84 degrees 12 minutes east, 18 degrees 24 minutes south and 89 degrees east, and 19 degrees 6 minutes south and 81 degrees east; it is expected that the 22nd of the month at 0500 UTC the volcanic ash cloud is located approximately in an area delimited by the following points: 17 degrees south and 81 degrees east, 18 degrees 12 minutes south and 86 degrees 36 minutes east, 20 degrees 24 minutes east, and 21 degrees 30 minutes south and 84 degrees 18 minutes east.

PART 5 SIGMET EXCHANGE

5.1 According to *Table MET 1B* of the *CAR/SAM FASID*, each MWO of the CAR/SAM States is assigned the responsibility of issuing SIGMET information for designated areas, usually for one or more FIRs and/or upper flight information regions (UIRs). Some MWOs are only responsible for lower FIRs, while others are responsible for the UIRs over those FIRs. In this respect, the MWOs should make the necessary coordinations in order to prevent problems resulting from SIGMET information not being compatible to the FIR and UIR.

5.2 Each MWO should take steps for the transmission of SIGMET messages locally to other FIRs, to the associated ACCs/FICs and to all aerodrome meteorological offices within its own FIR, for their use in briefings and, if applicable, for their inclusion in flight documentation.

5.3 Even though suppliers of ICAO documentation are clearly defined, each State has the faculty to make coordinations among air traffic services, aeronautical information services and aeronautical meteorology services, in order to include in their distribution list, nationwide, all the necessary addressees to undertake the task of providing safety to air operations.

5.4 These coordinations are perfectly standardized through paragraphs 7.1.6 of Annex 3 - Meteorological Service for International Air Navigation and 5.1.1 of the Manual on coordination between Air Traffic Services, Aeronautical Information Services and Aeronautical Meteorological Services, Doc 9377 AN/915.

5.5 The exchange of SIGMET messages, on an international level, should be strictly based on *Table MET 2B* of the *CAR/SAM FASID*, and those concerning volcanic ash should take due account of the operational procedures for the dissemination of volcanic eruption information contained in *ICAO Doc. 9766 – AN/968, Handbook on the international airways volcano watch (IAVW), Second edition - 2004*.

5.6 SIGMETs and special air-reports which have not been used for the preparation of SIGMETs should be sent to MWOs so that they can be made available to the aircraft prior to departure and to all airborne aircraft anticipating their route up to a distance equivalent to two hours of flight. In the case of non-stop flights with extremely long routes, SIGMETs and special air-reports for all of the foreseen route should be made available at the departure aerodrome.

5.7 Notwithstanding the above, SIGMETs and special air-reports concerning tropical cyclones and volcanic ash clouds should be made available at the departure aerodrome for the whole route, when it is a non-stop flight crossing areas which might be affected by said phenomena.

5.8 Likewise, provisions should be adopted for the immediate transmission to ATS units of information concerning hazardous weather, including SIGMET information, special air-reports, wind shear advisories, aerodrome and storm advisories, to make sure that said information will be duly and timely available for ground-air transmissions.

5.9 **Appendix F** contains a Table with the requirements for the transmission of SIGMET (WS, WC, WV) and special air-reports (UA).

PART 6 International Airways Volcano Watch (IAVW)

6.1 Operational procedures and contact list

6.1 The operational procedures for the dissemination of information on volcanic eruptions and the resulting volcanic ash clouds in areas which might affect the routes used by international flights, the general measures to be taken prior to a volcanic eruption and those to be taken upon the occurrence of a volcanic eruption by Area Control Centres (ACC), Flight Information Centres (FIC), International NOTAM Offices (NOF), Meteorological Watch Offices (MWO) and Volcanic Ash Advisory Centres (VAAC) are shown in detail in ICAO *Doc. 9766 – AN/968, Handbook on the international airways volcano watch (IAVW), Second edition – 2004*, available in the website www.icao.int/anb/iavwopsg/.

6.2 Annex 15, Twelfth edition, July 2004, presents in Appendix 3, the instructions to complete the ASHTAM format, and the abbreviated header: **TTAAiiii CCCC MMYYGggg (BBB)**, to be used after the usual header of AFTN communications, to facilitate the automatic treatment of ASHTAM messages in computerized data banks.

TTAAiiii CCCC MMYYGggg (BBB)

T T	ASHTAM data designator		
A A	State or Territory designator		
iiii	ASHTAM serial number expressed by a group of four characters		
CCCC	Four letter location indicator corresponding to the flight information region concerned		
MMYYGggg	Date, time of the report	MM	Month
		YY	Date
		GGgg	Hours (GG) and minutes (gg) UTC
(BBB)	Group capable to correct an ASHTAM message disseminated previously with the same serial number	COR	

6.3 Contact list

6.3.1 In order to facilitate the use of the contact list, **Appendix G** includes an abstract of Doc 9766-AN/968 – Second edition 2004, of contact information for the ACCs, MWOs, NOFs and volcanic observatories of SAM States under the responsibility of the VAAC Buenos Aires, and **Appendix H** contains contact information for the ACCs, MWOs, NOFs and volcanic observatories of CAR/SAM States under the responsibility of the VAAC Washington.

6.3.2 The States concerned should keep this list updated for the ICAO Lima and Mexico Regional Offices in order to keep international airways volcano watch (IAVW) operative.

6.3.3 Likewise, **Appendix I** includes a list of CAR/SAM States/Territories volcanoes, abstracted from the list of crossed references of volcanoes and navigation aids of Appendix H to Doc. 9691-AN/954.

Extract from Annex 3, Appendix 6 – Technical specifications related to SIGMET and AIRMET information, aerodrome warnings and wind shear warnings

Note.— The ranges and resolutions for the numerical elements included in SIGMET/AIRMET messages and in special air-reports are shown in Table A5-2 of this appendix.

Element as specified in Chapters 5 and 7	Detailed content	Template(s)				Examples
		SIGMET	SIGMET SST ¹	AIRMET	SPECIAL AIR-REPORT ²

Notes.—

1. In accordance with 1.1.2.
2. No wind and temperature to be uplinked to other aircraft in flight in accordance with 3.2.
3. See 4.1.
4. Fictitious location.
5. In accordance with 1.1.3 and 2.1.2.
6. See 3.1.
7. See 2.1.3.
8. In accordance with 1.1.4 and 2.1.4.
9. In accordance with 4.2.1 a).
10. In accordance with 4.2.4.
11. In accordance with 4.2.5 and 4.2.6.
12. In accordance with 4.2.1 b).
13. In accordance with 4.2.2.
14. In accordance with 4.2.3.
15. In accordance with 4.2.1 c).
16. The use of cumulonimbus, CB, is restricted to AIRMETs and SIGMETs related to SST flight during transonic and supersonic cruise; the use of towering cumulus, TCU, is restricted to AIRMETs in accordance with 1.1.4 and 2.1.4.
17. In accordance with 2.1.4.
18. In accordance with 4.2.1 d).
19. In accordance with 4.2.7.
20. In accordance with 4.2.7.
21. In accordance with 4.2.8.
22. Only for SIGMET messages for volcanic ash cloud and tropical cyclones.
23. Only for SIGMET messages for tropical cyclones.
24. Only for SIGMET messages for volcanic ash.
25. Up to four layers (or levels) in accordance with 4.2.9.
26. End of the message (as the SIGMET/AIRMET message is being cancelled).

Note.— In accordance with 1.15 and 2.1.5, severe or moderate icing and severe or moderate turbulence (SEV ICE, MOD ICE, SEV TURB, MOD TURB) associated with thunderstorms, cumulonimbus clouds or tropical cyclones should not be included.

*Abstract of Doc 8400/5 – PANS/ABS-ICAO Abbreviations and Codes***Common abbreviations in meteorological messages****A**

ABT	About
ABV	Above
AC	Altostratus
ACT	Active or activated or activity
AD	Aerodrome
ADS	The address (<i>when this abbreviation is used to request a repetition, the question mark (IMI) precedes the abbreviation, e.g. IMI ADS (to be used in AFS as a procedure signal)</i>)
ADZ	Advise
AFT	After . . . (<i>time or place</i>)
AFTN	Aeronautical fixed telecommunication network
AIREP	Air-report
AIRMET	Information concerning en-route weather phenomena which may affect the safety of low-level aircraft operations
ALT	Altitude
AMD	Amend or amended (<i>used to indicate amended meteorological message; message type designator</i>)
APCH	Approach
APRX	Approximate or approximately
AS	Altostratus
AT . . .	At (<i>followed by time at which weather change is forecast to occur</i>)
ATS	Air traffic services

B

BASE	Cloud base
BCFG	Fog patches
BECMG	Becoming
BKN	Broken
BL . . .	Blowing (<i>followed by DU = dust, SA = sand or SN = snow</i>)
BLW	Below . . .
BR	Mist
BTL	Between layers
BTN	Between

C

C	Degrees Celsius (<i>Centigrade</i>)
CAT	Clear air turbulence
CAVOK	(<i>to be pronounced “KAV-OH-KAY”</i>) Visibility, cloud and present weather better than prescribed values or conditions
CB	(<i>to be pronounced “CEE BEE”</i>) Cumulonimbus
CC	Cirrocumulus
CI	Cirrus
CLD	Cloud
CONT	Continue(s) or continued

COV	Cover <i>or</i> covered <i>or</i> covering
CS	Cirrostratus
CTA	Control area
CU	Cumulus

D

D	Downward (<i>tendency in RVR during previous 10 minutes</i>)
DEG	Degrees
DIF	Diffuse
DIST	Distance
DP	Dew point temperature
DR . . .	Low drifting (<i>followed by DU = dust, SA = sand or SN = snow</i>)
DS	Dust storm
DTRT	Deteriorate <i>or</i> deteriorating
DU	Dust
DUC	Dense upper cloud
DZ	Drizzle

E

E	East <i>or</i> eastern longitude
EMBD	Embedded in a layer (<i>to indicate cumulonimbus embedded in layers of other clouds</i>)
END	Stop-end (<i>related to RVR</i>)
EXC	Except
EXTD	Extend <i>or</i> extending

F

FBL	Light (<i>used to indicate the intensity of weather phenomena, interference or static reports, e.g. FBL RA = light rain</i>)
FC	Funnel cloud (<i>tornado or water spout</i>)
FCST	Forecast
FEW	Few
FG	Fog
FIR‡	Flight information region
FL	Flight level
FLUC	Fluctuating <i>or</i> fluctuation <i>or</i> fluctuated
FM . . .	From (<i>followed by time weather change is forecast to begin</i>)
FREQ	Frequency
FRONT	Front (<i>relating to weather</i>)
FRQ	Frequent
FT	Feet (<i>dimensional unit</i>)
FU	Smoke
FZ	Freezing
FZDZ	Freezing drizzle
FZFG	Freezing fog
FZRA	Freezing rain

G

GAMET	Area forecast for low-level flights
GR	Hail
GRIB	Processed meteorological data in the form of grid point values expressed in binary form (<i>aeronautical meteorological code</i>)
GS	Small hail and/or snow pellets

H

HPA	Hectopascal
HR	Hours
HURCN	Hurricane
HVY	Heavy (<i>used to indicate the intensity of weather phenomena, e.g. HVY RA = heavy rain</i>)
HZ	Haze

I

IC	Ice crystals (<i>very small ice crystals in suspension, also known as diamond dust</i>)
ICE	Icing
IMC‡	Instrument meteorological conditions
INC	In cloud
INTSF	Intensify or intensifying
ISOL	Isolated

J

JTST	Jet stream
-------------	------------

K

KG	Kilograms
KMH	Kilometres per hour
KT	Knots

L

LAT	Latitude
LOC	Local or locally or location or located
LONG	Longitude
LVL	Level
LYR	Layer or layered

M

M	Metres (preceded by figures)
MAX	Maximum
MBST	Microburst
MET	Meteorological or meteorology
METAR	Aviation routine weather report (<i>in aeronautical meteorological code</i>)
MID	Mid-point (related to RVR)
MIFG	Shallow fog
MNM	Minimum
MOD	Moderate (<i>used to indicate the intensity of weather phenomena, interference or static reports, e.g. MOD RA = moderate rain</i>)
MON	Above mountains

MOV	Move <i>or</i> moving <i>or</i> movement
MS	Minus
MSL	Mean sea level
MT	Mountain
MTW	Mountain waves
MWO	Meteorological watch office

N

N	No distinct tendency (<i>in RVR during previous 10 minutes</i>)
N	North <i>or</i> northern latitude
NC	No change
NE	North-east
NIL	None <i>or</i> I have nothing to send to you
NM	Nautical miles
NOSIG	No significant change (<i>used in trend-type landing forecasts</i>)
NOTAM	A notice distributed by means of telecommunication containing information concerning the establishment, condition or change in any aeronautical facility, service, procedure or hazard, the timely knowledge of which is essential to personnel concerned with flight operations
NS	Nimbostratus
NSC	Nil significant cloud
NSW	Nil significant weather
NW	North-west

O

OBS	Observe <i>or</i> observed <i>or</i> observation
OBSC	Obscure <i>or</i> obscured <i>or</i> obscuring
OCNL	Occasional <i>or</i> occasionally
OM	Outer marker
OPMET	Operational meteorological (<i>information</i>)
OTLK	Outlook (<i>used in SIGMET messages for volcanic ash and tropical cyclones</i>)
OVC	Overcast

P

PARL	Parallel
PERM	Permanent
PO	Dust/sand whirls (<i>dust devils</i>)
PRFG	Aerodrome partially covered by fog
PROB	Probability
PS	Plus

Q

QFE	Atmospheric pressure at aerodrome elevation (<i>or at runway threshold</i>)
QNH	Altimeter sub-scale setting to obtain elevation when on the ground

R

RA	Rain
RAFC	Regional area forecast centre
RE	Recent (<i>used to qualify weather phenomena, e.g. RERA = recent rain</i>)
RNAV	(<i>to be pronounced "AR-NAV"</i>) Area navigation

ROBEX	Regional OPMET bulletin exchange (<i>scheme</i>)
ROFOR	Route forecast (<i>in aeronautical meteorological code</i>)
RTD	Delayed (<i>used to indicate delayed meteorological message; message type designator</i>)
RVR	Runway visual range
RWY	Runway

S

S	South or southern latitude
SA	Sand
SARPS	Standards and Recommended Practices [ICAO]
SC	Stratocumulus
SCT	Scattered
SEV	Severe (<i>used e.g. to qualify icing and turbulence reports</i>)
SFC	Surface
SH	Showers (<i>followed by RA = rain, SN = snow, PE = ice pellets, GR = hail, GS = small hail and/or snow pellets or combinations thereof, e.g. SHRASN = showers of rain and snow</i>)
SIGMET	Information concerning en-route weather phenomena which may affect the safety of aircraft operations
SKC	Sky clear
SN	Snow
SPECI	Aviation selected special weather report (<i>in aeronautical meteorological code</i>)
SPOT	Spot wind
SQ	Squall
SS	Sandstorm
SST	Supersonic transport
ST	Stratus
STNR	Stationary
SW	South-west

T

T	Temperature
TAF	Aerodrome forecast
TC	Tropical cyclone
TCU	Towering cumulus
TDO	Tornado
TEMPO	Temporary or temporarily
TL	Till (<i>followed by time by which weather change is forecast to end</i>)
TO	To . . . (place)
TOP	Cloud top
TS	Thunderstorm (<i>in aerodrome reports and forecasts, TS used alone means thunder heard but no precipitation at the aerodrome</i>)
TS . . .	Thunderstorm (<i>followed by RA = RAIN, SN = snow, PE = ice pellets, GR = hail, GS = small hail and/or snow pellets or combinations thereof, e.g. TSRASN = thunderstorm with rain and snow</i>)
TURB	Turbulence

U

U	Upward (<i>tendency in RVR during previous 10 minutes</i>)
UIR	Upper flight information region
UTC	Coordinated Universal Time

V

VA	Volcanic ash
VER	Vertical
VHF	Very high frequency [30 to 300 MHz]
VIS	Visibility
VMC	Visual meteorological conditions
VOLMET	Meteorological information for aircraft in flight
VRB	Variable

W

W	West or western longitude
WAFC	World area forecast centre
WDSRP	Widespread
WI	Within
WINTEN	Forecast upper wind and temperature for aviation
WKN	Weaken or weakening
WRNG	Warning
WS	Wind shear
WX	Weather

Z

Z	Coordinated Universal Time (<i>in meteorological messages</i>)
----------	--

**INTERNATIONAL TRANSMISSION OF SIGMET MESSAGES (WS/WC/WV) AND
SPECIAL AIR-REPORTS (UA) IN THE STATES/TERRITORIES OF THE CAR/SAM REGIONS
BASED ON CAR/SAM FASID TABLE MET 2B**

Note: According to the explanation of CAR/SAM FASID Table MET 2B, "S" means that the exchange of SIGMET WS, WC, WV and special AIREPs (column 5), is required and "s" that only SIGMET WV and/or WC are required, therefore, when preparing the AFTN routing lists, the AFTN addresses of both rows should be included, as required.
