We are Control Union

With an extensive track record, Control Union has been helping to build a better world for over 100 years. We have expertise in certifications, inspections, laboratory services, pest control and risk management, providing peace of mind and trustworthy worldwide trade.

Worldwide reach, global coverage with local knowledge

For decades Control Union has offered peace of mind to many supply chains in businesses and industries around the globe. We are always close. In 80+ countries and with more than 274 offices worldwide, our in-depth knowledge and experience cover all aspects of the supply and value chain in many industries allowing us to provide the very best solutions and 'boots on the ground' support.

SERVICES AND AREAS OF EXPERTISE

Spotlight on the sector:

Certifications: Production process, environmental impact and regulatory compliance.

Verification: Carbon footprint calculations that companies make for their products, processes or facilities.

- ISO 17020 - Inspections
- ISO 14064-1
- ISO 14064:2018
- PAS 2050
- PAS 2060
- GHG Protocol

PRINCIPAL CERTIFICATION SCHEMES

- The International Sustainability and Carbon Certification (ISCC) ISCC's mission is to use certification as a tool to reduce GHG emissions and establish sustainable production with fully traceable supply chains from the origin to the final user. This shall be achieved by implementing social, economic and environmental criteria.

+ 7000 certificates
Around 70 countries

- The Roundtable on Sustainable Biofuels (RSB)
The Roundtable on Sustainable Biofuels (RSB) is a multi-stakeholder organization hosted by the Swiss Federal Institute of Technology in Lausanne (EPFL).

+ 100 certificates
Around 25 countries

ISCC IN THE SUSTAINABILITY MARKET

- Many frontrunner organizations active in the field of SAF are **ISCC Association Members and System Users**.
- ISCC is part of the **CAEP Fuels Task Group within ICAO** that is working on the further development of CORSIA eligible fuels.
- ISCC is an active partner of **ICAO's "ACT-SAF" programme**, helping States in developing their full potential in SAF deployment.
- With its members, ISCC is conducting pilot projects on a variety of topics, including for **innovative feedstocks, smart agricultural practices and Power-to-Liquids**

CONTROL UNION: ISCC CERTIFICATION

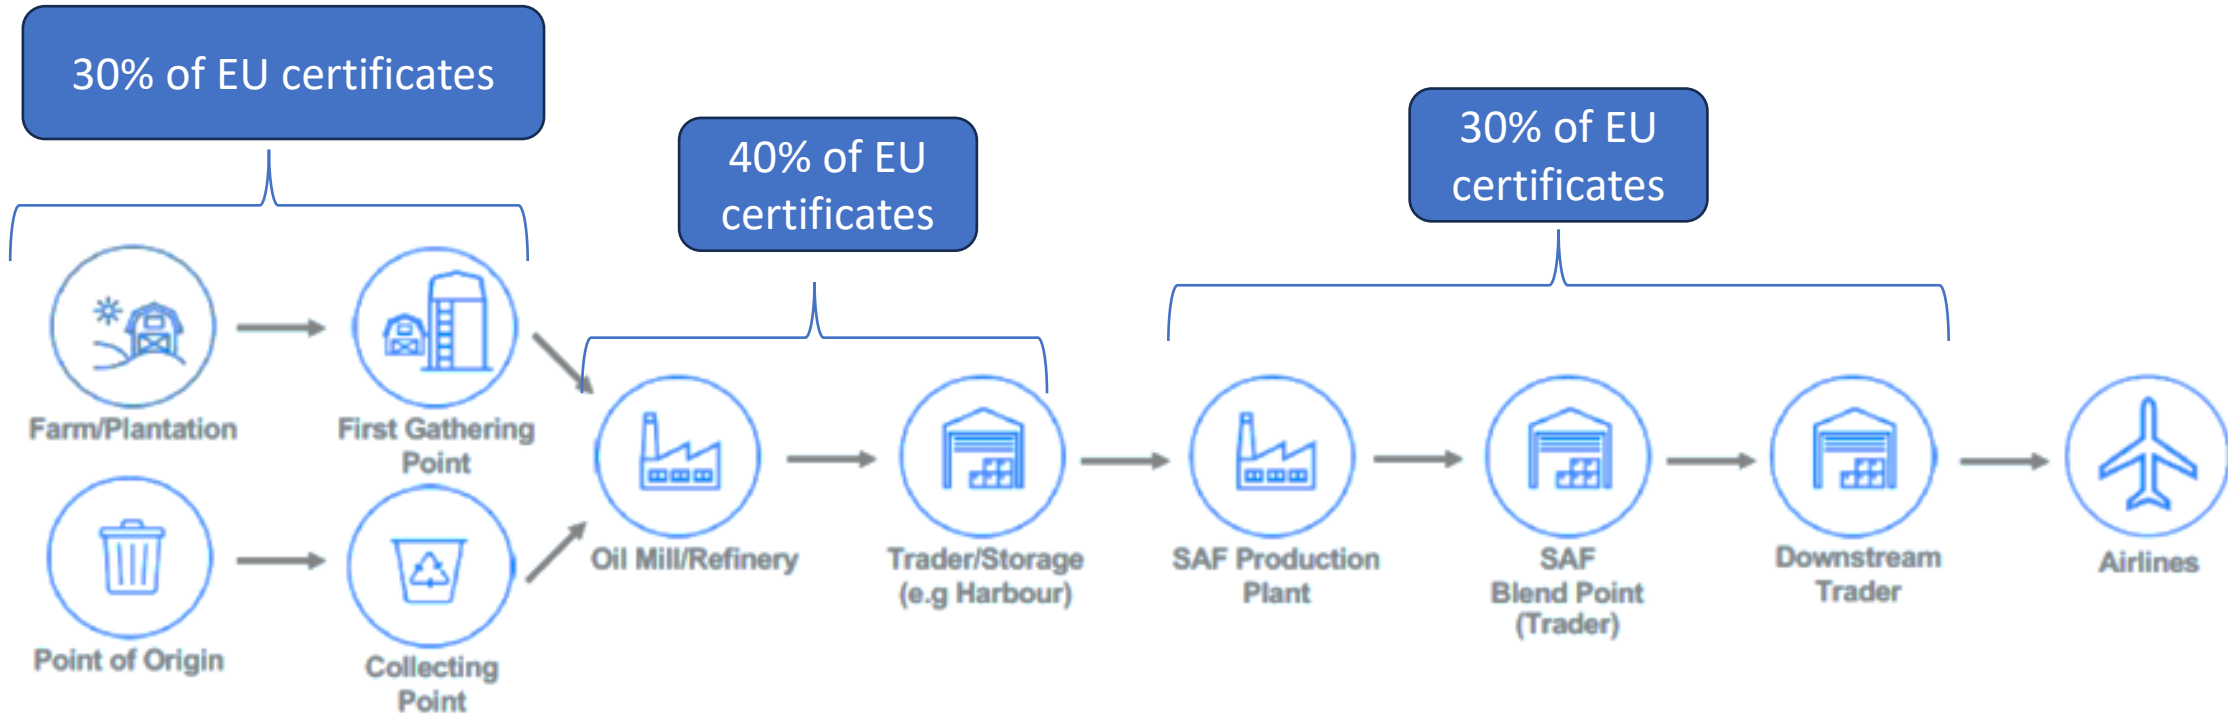

ISCC:
12,000+ Certificates
>7,000 ISCC EU
>4,800 ISCC PLUS
>210 ISCC CORSIA

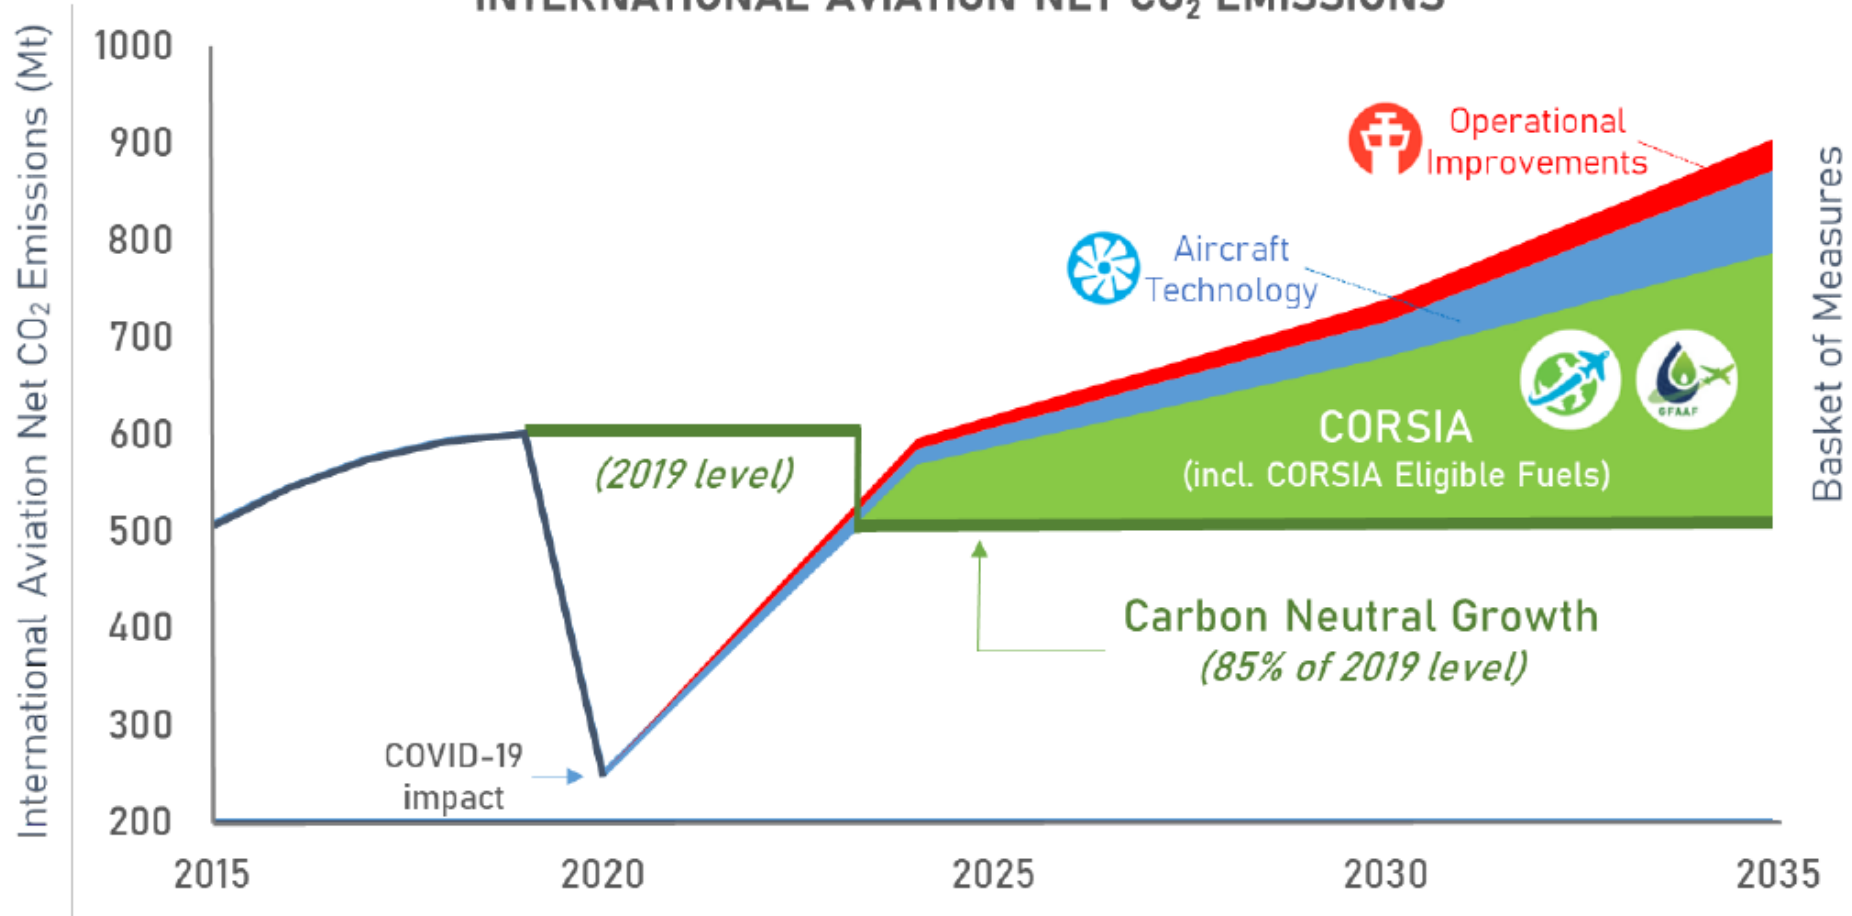

**Control Union is the leading ISCC
CERTIFICATION BODY**

~2000 certificates
Worldwide

CONTROL UNION: ISCC EU CERTIFICATION NETWORK

ISCC CORSIA CERTIFICATION: FROM THE FIELD TO FLIGHT

ISCC certifies all sustainable feedstocks for all markets

Food

Feed

Energy

Industrial Applications

KEY ELEMENTS FOR ISCC CERTIFICATION

Management System

Appropriate for the type, complexity, volumen and risks of the operation.

Traceability and Mass Balance controls

Supplier data

Verification of GHG emissions

CHALLENGES IN CORSIA CERTIFICATION

Greenhouse Gas (GHG) Evaluation:

Conducting accurate GHG evaluations could be complex, requiring comprehensive data collection and analysis to ensure compliance with ISCC standards. However, most of our clients have this evaluation in advance due to local or private regulations.

Implementation of Quality Management Systems (QMS):

Establishing a robust Quality Management System is essential, but it can be resource-intensive and requires ongoing commitment to maintain the requirements of certifications. Developing the necessary skills and knowledge within the organization to meet certification requirements may require significant training and capacity-building efforts.

Record-Keeping Requirements:

Maintaining detailed and accurate records for all processes involved in certification is crucial but can be burdensome, especially for companies with extensive supply chains.

User Familiarity and Training

There may be a learning curve for users unfamiliar with the ISCC HUB platform, necessitating comprehensive training and support to ensure effective utilization.

Ambiguity in Definitions

The definitions of key terms, such as 'waste' or 'sustainable biomass,' 'Residue' can be ambiguous, leading to confusion and inconsistency in interpretation.

Continuous Improvement:

Organizations must commit to continuous improvement in sustainability practices, which can be difficult to implement effectively across all levels.

Getting certified in 5 steps!

1. Request a Certification or Verification

The first step is to contact us where we will be able to set up a call to directly discuss the specific nature of your certification needs and send you an application form.

2. Receive the offer letter

Once we have your application(s), we will provide you with an offer letter that will indicate the price and scope of your certification.

3. Accept and get you Audit plan

Upon accepting and signing, we will contact you about setting up dates for your audit. Once an auditor is assigned to your audit, an agenda and audit plan will be sent to prepare for your audit. At the close of your audit, the auditor will indicate if any non-compliances have been found and agree to the deadlines of the corrective actions.

4. Audit Review

Your audit results will be reviewed by a secondary person, called the certifier, who ultimately decides whether certification will be granted. If you had corrective actions to approach, these need to be sent in for the review process to begin.

5. Get your Certification / Get your attestation or score that has been reported

Certifications
If the results have been approved, you will be contacted to receive your certification. If the results were not satisfactory, you will need to submit your corrective actions within the agreed time frame or pause your certification until such time as you are ready.

Verifications
If results are not satisfactory, you will be required to wait a period of time to begin the process again.

Thank you!

Are you looking for a certain service, do you have any questions, or do you need support? Let us know. We're glad to be of help.
