

ICAO Action 4

In relation to safety recommendations 4 and 5, the Flight Recorder Specific Working Group (FLIRECSWG) discussed the carriage of automatic deployable flight recorders (ADFRs) on large transport aeroplanes extensively and performance-based provisions for the carriage of ADFRs were proposed. ADFRs are fitted with integrated emergency locator transmitters (ELT) and are designed to operate while floating on water after deployment. These proposals are due for consideration by the Council in first quarter of 2016.
