

## ICAO Action

To facilitate meeting the obligations defined in Annex 8 — *Airworthiness of Aircraft*, Part II, Chapter 4, ICAO is currently working on a new platform called the Aircraft Registration System (ARN). This platform would seek to establish a global dataset of registered aircraft information from Member States, enabling subsequent services to be provided to all stakeholders. This will include the provision of airworthiness directives to ensure that the relevant information reaches the correct States in a timely manner based on the registered aircraft information of that particular State.
