

ICAO Action

Concerning safety recommendation 2017-S34, ICAO plans to review the existing guidance material contained in the *Manual of Civil Aviation Medicine* (Doc 8984) to include a risk assessment model to facilitate aero-medical decision-making during the evaluation of pilots at risk from recurrent heart attacks. This task will be supported by the Medical Provisions Study Group (MPSG) in consultation with relevant stakeholders and is envisioned to be completed by December 2019.
