

## **Safety Recommendation**

The ANSV recommends that ICAO institute as mandatory requirement for experimental aircraft the installation of flight data recorders (FDR and CVR) which, according to MTOM and use, should be anyway equipped with such devices at the completion of the certification process. The number and the list of the minimum required recorded parameters for the experimental aircraft should be the same as the ones required for the equivalent certified aircraft, according to the MTOM and the use. In the case of the tiltrotor, the conservative solution shall be adopted amongst the requirements for an airplane and a helicopter.
