Agenda Item 4: Management of OPMET exchange:

- a) OPMET monitoring and quality control procedures
 - RODB backup procedures – contingency trials

IATA OPMET DATA MONITORING (SADIS)

(Presented by IATA)

SUMMARY

This paper summarizes the results of an OPMET data monitoring for the AISAPAC region with the focus on SADIS distribution.

1 Introduction

1.1 Since SADIS becomes operational in the 90's it became to a more and more reliable source of weather data. Beside the distribution of WAFS products it is used for broadcasting OPMET data. Basis for the data distribution via SADIS is the SADIS User Guide and the Annex 1 to this guide. This guide is now identical to the FASID Table MET 2A.

1.2 FASID Table MET 2A is now also the basis of the ISCS OPMET data transmission.

1.3 SADIS has the task to provide all necessary or requested weather data to aviation users so that SADIS can be considered as a single source of data for flight planning purposes.

1.4 SADIS is a dedicated ICAO system, regulated and controlled under ICAO standards and recommended practices. It forms part of the Aeronautical Fixed Services (AFS) to ensure that aviation data are distributed without conflict and with the appropriate priority.

2 Discussion

2.1 Since the operational start of SADIS many airlines are linked (directly or indirectly) to SADIS as a primary and single source of weather data and products for aviation. Data like scheduled and non-scheduled OPMET data are depending on their availability and the user requirements.

2.2 The requirements for OPMET data described in Annex 1 of the SUG have been revised several times over the last years. The current SADIS User Guide Annex 1 reflects the user requirements as well as the AOP table of the ICAO regions. The latest editions of the AOP tables are used.

2.3 The following table gives a brief overview about the current number of available airports providing OPMET data on SADIS from the ASIAPAC region. This statistic is based on information provided in SUG Annex 1 (FASID Table MET 2A) dated February 2010 and on the result of IATA monitoring of the SADIS broadcast over period of 9 weeks (starting at 04th of January 2010).

| | |
|---|-----------|
| Aerodromes listed in SUG Annex 1 | 348 (+7) |
| AOP Aerodromes listed in SUG Annex 1 | 205 (-9) |
| | |
| AOP Aerodromes providing SA | 179 (+47) |
| AOP Aerodromes providing FT | 183 (-1) |
| | |
| AOP Aerodromes providing additionally FC (this is not according ICAO Annex 3) | 14 |

2.4 The above table shows that 179 (87,3%) [2009: 132 (61,7%)] AOP aerodromes issue METAR (SA) and 183 (89,3%) [2009: 184 (86,0%)] AOP aerodromes issue TAF (FT) as requested. All other AOP aerodromes do not meet the users requirements (12,7%, 10,7%). States are obliged to issue METAR and TAF for AOP aerodromes unless the state notifies ICAO that no OPMET data are issued for that certain AOP aerodrome. Further details are listed in the Appendix to this WP).

2.5 There still 14 AOP aerodromes in the ASIAPAC region for which FC and FT are issued and distributed on SADIS. This is not required and also not according ICAO Annex 3.

2.6 IATA is requesting some efforts by the group to improve the availability of OPMET data for AOP aerodromes in the near future. The group may wish to discuss the following draft conclusion proposed for the CNS/MET SG/14 meeting:

Draft Conclusion — Improvement of OPMET data availability for AOP aerodromes

That ICAO be invited to

- a) continue the efforts to improve the availability of OPMET data for AOP aerodromes, and
- b) try to achieve the aim of 95% availability (METAR and TAF) of all possible AOP aerodromes on SADIS broadcast as soon as possible, and
- c) remind states concerned that only one type of TAF is allowed to be issued and transmitted (IATA requires only FT)

2.7 Since more and more Non-AOP aerodromes are used internationally IATA has formulated following general requirement for OPMET data in its IATA METTF/14 meeting:

IATA Position:

All OPMET data currently available should be distributed. This does not mean modifying the airport status in the AOP table

2.8 Non-AOP Aerodromes are widely used as en-route alternates and for ETOPS operation. With regard to a safe flight operation OPMET data for these aerodromes are important and should be available to all airlines.

2.9 The following table gives a brief overview about the current number of available airports providing OPMET data on SADIS from the ASIAPAC region. This statistic is based on information provided in SUG Annex 1 (FASID Table MET 2A) dated February 2010 and on the result of IATA monitoring of the SADIS broadcast over period of 9 weeks (starting at 04th of January 2010).

| | |
|---|-----------|
| Aerodromes listed in SUG Annex 1 | 348 (+7) |
| Non-AOP Aerodromes listed in SUG Annex 1 | 143 (+16) |
| | |
| Non-AOP Aerodromes providing SA | 99 (+15) |
| Non-AOP Aerodromes providing FT | 106 (+20) |
| | |
| Non-AOP Aerodromes providing additionally FC (this is not according ICAO Annex 3) | 2 |

2.10 The above table shows that 99 (69,2,1%) [2009: 84 (66,1%)] Non-AOP aerodromes issue METAR (SA) and 106 (74,1%) [2009: 86 (67,7%)] Non-AOP aerodromes issue TAF (FT) as requested. All other AOP aerodromes do not meet the users requirements (30,8%, 25,9%). States are requested to issue and distribute METAR and TAF for Non-AOP aerodromes if available (details are listed in the Appendix to this WP).

2.11 There still 2 Non-AOP aerodromes in the ASIAPAC region for which FC and FT are issued and distributed on SADIS. This is not required and also not according ICAO Annex 3.

2.12 IATA is requesting some efforts by the group to improve the availability of OPMET data for Non-AOP aerodromes in the near future. The group may wish to discuss the following conclusion proposed for the CNS/MET SG/14 meeting:

Draft Conclusion — Improvement of OPMET data availability for Non-AOP aerodromes

That ICAO be invited to

- a) continue the efforts to improve the availability of OPMET data for Non-AOP aerodromes listed in SUG Annex 1, and
- b) try to achieve the aim of 90% availability (METAR and TAF) of all listed Non-AOP aerodromes on SADIS broadcast as soon as possible, and
- c) remind states concerned that only one type of TAF is allowed to be issued and transmitted (IATA requires only FT)

2.13 There are further aerodromes in the ASIAPAC region which not listed in the FASID Table MET 2A. The IATA monitoring shows that OPMET data were found on the SADIS broadcast for some of these airports.

2.14 Non-AOP Aerodromes are widely used as en-route alternates and for ETOPS operation. With regard to a safe flight operation OPMET data for these aerodromes are important and should be available to all airlines.

2.15 The following table gives a brief overview about the current number of available airports providing OPMET data on SADIS from the ASIAPAC region. This statistic is based on information provided in SUG Annex 1 (FASID Table MET 2A) dated February 2010 and on the result of IATA monitoring of the SADIS broadcast over period of 9 weeks (starting at 04th of January 2010).

| Aerodromes not listed in SUG1 | 773 |
| Non-AOP-SUG Aerodromes providing SA | 64 |
| Non-AOP-SUG Aerodromes providing FT | 24 |
| Non-AOP-SUG Aerodromes providing additionally FC (this is not according ICAO Annex 3) | 2 |
| Non-AOP-SUG Aerodromes providing FC, but only FT is required | 18 |

2.16 In the Appendix to this WP, details of the IATA monitoring of all aerodromes listed in SUG Annex 1 and broadcasted on SADIS are provided. These details not only pointing to missing data in the OPMET data exchange, but also indicating problems in the regularity of the OPMET data availability from the ASIAPAC region.

2.17 The IATA monitoring is performed on a daily basis. The Appendix contains detailed information about the availability and regularity of OPMET data from the ASIAPAC region. The following explanations of the columns will guide you through the tables:#

| | |
|---------------------------|---|
| ICAO Location | Airport location indicator |
| SA, SP, FC, FT, FX | if Y then OPMET data type is required (FC=TAF, FC=24H TAF, FX=30H TAF) |
| AOP | if Y then airport is listed in AOP table |
| SUG | if Y then airport is listed in SUG 1 |
| S | F - Full : OPMET data as listed issued for the aerodrome all through the 24-hour period If hourly METARs are issued then a maximum number of 216 METARs can be received over 9 weeks If half-hourly METARs are issued then a maximum number of 432 METARs can be received over 9 weeks If FC are issued every 3 hours then a maximum number of 72 FC can be received over 9 weeks If FT are issued every 6 hours then a maximum number of 36 FT can be received over 9 weeks If FT are issued every 3 hours then a maximum number of 72 FT can be received over 9 weeks P - Partial : OPMET data as listed not issued for the aerodrome for the entire 24-hour period In that case the maximum number os messages as described for full service cannot be reached N - None : No OPMET data issued for the time being BLANK – not specified |
| SA-MON, SA-TUE .. | Number of SA, FC, FT received on Monday, Tuesday ... over the last 9 weeks |

2.18 How you can read and interpret the tables in the Appendix:

Example:

NZAA, NZCH and NZWN are providing full service over 24 hours. So it is expected that 216 METARs are received over the last 9 weeks. That is the case here and no deficiency is detected.

AGGH is also providing full service, but here the number of METARs is significantly below the expected.

OPLA is also providing full service, but the number of received METARs exceeds the maximum number of hourly METARs and is significant lower than the maximum number of half-hourly METARs.

This can have two reasons:

1. there is no full service and the information provided in the FASID tables is wrong
2. there is a problem in the provision or issuance of METARs
3. there is a communication problem

RPLB is only providing partial service. So number of received METARs must be lower than the maximum number of hourly METARs. The number of received METARs is nearly constant over the days, so it can be assumed that there is no communication problem, but no full service is established there..

| RPLB | Y | Y | | Y | | Y | Y | P | 126 | 120 | 118 | 106 | 129 | 139 | 148 |

In general it can assumed that the regularity is excellent if the received number of METAR/TAF from airports with full service differs not more than 15% from the maximum possible number (e.g. hourly METAR between 190 and 216).

3 Action by the group

3.1 The group is invited

- a) to note results of the IATA OPMET data monitoring and information provided
- b) to use the result tables to improve the OPMET data exchange in general
