

ADREP/ECCAIRS

There are two types of training for ADREP - ECCAIRS systems available to Contracting States

- **TECHNICAL COURSE** is aimed at those who will install and administer the ECCAIRS environment. This course covers the Installation, Setup and Management of the ECCAIRS system, and has the scope of enabling system administrators and/or IT personnel to get acquainted with the system, allowing them to perform setup and configuration of their ECCAIRS installation, as well as being able to supply basic user support.
 - **Audience:** IT administrators and/or officers, power users
 - **Not suited for:** Flight investigators, office clerks
 - **Prerequisites:** Reasonable knowledge and understanding of IT, in particular in the field of software architecture, databases. Good knowledge of the Microsoft Windows operating system is required.
 - (Maximum 20 participants per course)
-
- **END-USER COURSE** is provided for 'end-users' who will input the safety data into the system and/or interrogate the system for safety analysis purposes. It provides an overview of the ADREP 2000 taxonomy, as well as hands on experience of ECCAIRS as a tool used to code/enter and extract/analyze safety data.
 - **Audience:** Flight investigators, safety officers, office clerks who will be entering or extracting data from ECCAIRS
 - **Prerequisites:** Good knowledge of one or more of occurrence reporting, safety management concepts, or safety data analysis is advisable. Good knowledge of the Microsoft Windows operating system and Microsoft Office products is recommended.
 - (Maximum 20 participants per course)
