

Overview of Evolution to Performance Based Navigation

ICAO PBN Seminar
Overview of Evolution to Performance Based Navigation

1

Overview

- Learning Objectives: at the end of this presentation you should:
 - Understand what are the two main elements of Performance Based Navigation
 - Understand the key difference between the two elements
- This presentation will discuss
 - Navigation in Context
 - Evolution to Performance Based Navigation
 - Performance Based Navigation
 - What Is It?
 - What is Area Navigation (RNAV)?
 - What is Required Navigation Performance?
 - What is the Key Difference?

2

Navigation in Context

Airspace System

ICAO PBN Seminar
Overview of Evolution to Performance Based Navigation

3

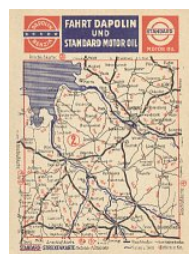

Navigation: The Beginning

IFR

I Fly Roads!

- And Rivers
- And Railroads
- And Buildings
- And Telephone Lines
- And Whatever Else I Can See

ICAO PBN Seminar
Overview of Evolution to Performance Based Navigation

4

The Early Days

Night and Weather

- 1910s
 - ➔ First Bonfires and Beacons
- Early 1920s
 - ➔ Lighted airport boundaries
 - ➔ Spot-lit windsocks
 - ➔ Rotating lighted beacons on towers
 - ➔ Lighted Airways

ICAO PBN Seminar
Overview of Evolution to Performance Based Navigation

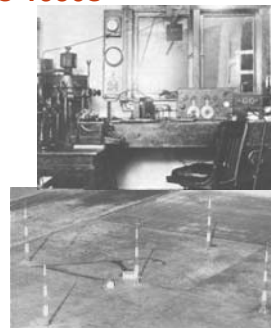

5

Late 1920s-1930s

Radio

- Radio for Two-Way Communications
 - ➔ Weather Updates
 - ➔ Request Help With Navigation
- Radio for Navigation
 - ➔ Radio Marker Beacons
 - ➔ 4-Course Radio Range System
- Pilots Listen for Navigation Signals

ICAO PBN Seminar
Overview of Evolution to Performance Based Navigation

6

1930s - 1940s

VOR

- Static-Free VHF Omni-directional Radio Range
 - Pilots Navigate by Instrument
- VOR (with improvements) becomes a primary NAVAID for decades
 - Defines Routes
 - Supports Approach Procedures

VOR Has Done a Great Job For Decades!

ICAO PBN Seminar
Overview of Evolution to Performance Based Navigation

7

1940s-1950s

ILS

- 1929: First system tested
- 1946: (Provisional) ICAO selects ILS as primary landing air for international “trunk” airports
- Today: ILS Cat I, Cat II, Cat III

ILS Still Does a Great Job!

ICAO PBN Seminar
Overview of Evolution to Performance Based Navigation

8

From 1950s

DME

- 1961: first regular civil use (pilot tuned)
- In PBN, DME use is based on automatic tuning

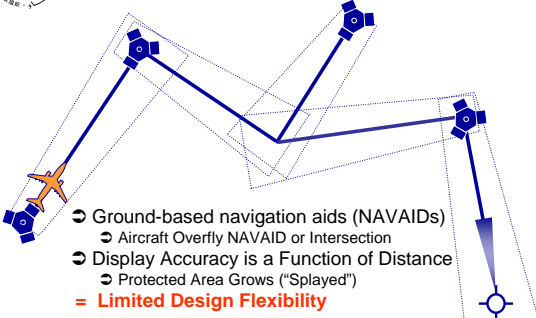

DME is incorporated into PBN

ICAO PBN Seminar
Overview of Evolution to Performance Based Navigation

9

Conventional Navigation

- Ground-based navigation aids (NAVAIDs)
 - Aircraft Overfly NAVAID or Intersection
- Display Accuracy is a Function of Distance
 - Protected Area Grows (“Splayed”)

= Limited Design Flexibility

ICAO PBN Seminar
Overview of Evolution to Performance Based Navigation

10

Evolution of RNAV

- Long Range Navigation (LORAN)
- Omega Radio Navigation System*
- Inertial Navigation
- VOR/VOR and VOR/DME
- Multi-sensor Flight Management System (FMS)
- GPS, GLONASS, and Augmentations

*terminated in 1997

ICAO PBN Seminar
Overview of Evolution to Performance Based Navigation

11

Transition to Performance Based Navigation

- Navigation based on specified system performance requirements for aircraft operating on a air traffic route, instrument approach procedure, or in a designated airspace
 - Potential for aircraft to demonstrate requirements compliance through a mix of capabilities, rather than only specific equipment
 - Regulators will not always need to write new compliance documents for new capabilities

PBN makes a clear distinction between RNAV Applications and RNP Applications

ICAO PBN Seminar
Overview of Evolution to Performance Based Navigation

12

Difference between RNAV and RNP Applications

- RNAV applications assume aircraft operations on any desired flight path in the coverage of station-reference NAVAIDS or within the limits of the capability of self-contained aids, or a combination of these.
- RNP applications are RNAV applications requiring

ICAO PBN Seminar
Overview of Evolution to Performance Based Navigation

13

Definition: Area Navigation

- ICAO: Area Navigation is a method of navigation enabling aircraft to fly on any desired flight path:
 - within the coverage of referenced NAVAIDS, or
 - within the limits of the capability of self-contained systems, or
 - a combination of these capabilities
- The concept of PBN relies on the use of an area navigation system

ICAO PBN Seminar
Overview of Evolution to Performance Based Navigation

14

Area Navigation (RNAV)

- Ground or Space Based NAVAIDS
- Aircraft Fly Waypoints
- Protected Area Constant ("Linear")
- = **Increased Design Flexibility**

ICAO PBN Seminar
Overview of Evolution to Performance Based Navigation

15

Required Navigation Performance

- Adds to RNAV
- On Board Monitoring & Alerting
- May Incorporate Radius to Fix Turns
- = **Optimized Use of Airspace**

ICAO PBN Seminar
Overview of Evolution to Performance Based Navigation

16

RNAV Application (notional)

RNAV 1

Track Centerline

1 Nautical Mile 95% of flight time

1 Nautical Mile 95% of flight time

ICAO PBN Seminar
Overview of Evolution to Performance Based Navigation

17

RNP Application (notional)

RNP 1 **Alert to Pilot**

Track Centerline

1 Nautical Mile 95% of flight time

1 Nautical Mile 95% of flight time

The Key Difference:
On-Board Performance Monitoring and Alerting

ICAO PBN Seminar
Overview of Evolution to Performance Based Navigation

18

Summary

- Navigation is one element in the CNS/ATM infrastructure that enables an Airspace System
- Evolution to Performance Based Navigation (PBN)
- Learning Objectives were
 - Understand what are the two main elements of Performance Based Navigation
 - RNAV and RNP
 - Understand the key difference between the two elements
 - On-Board Performance Monitoring and Alerting
