# INTERNATIONAL CIVIL AVIATION ORGANIZATION

A UN SPECIALIZED AGENCY

## Air Navigation Plans and e-ANP VOL III

**Mayda Alicia Ávila**

Regional Officer, Communications, Navigation and Surveillance

**Fabiana Todesco**

Regional Officer, Aerodromes and Ground Aids

01  
CAR Regional  
Strategy

# CAR Regional Strategy for the development of National Air Navigation Plans and their contribution to the e-ANP VOL III

Following up on Conclusions GREPECAS/20/03, GREPECAS/20/16 and GREPECAS/20/18:

1. Establish the ANS regional implementation level:

- BBB evaluation
- Evaluation of the Implementation status of the ASBU elements

2. Identification of the data available at the regional level to establish the KPIs

3. Analysis of the information and establish regional priorities regarding ANS implementation, KPIs and projects to be carried out in the short term

4. Joint work between the NACC and SAM Offices to complete the e-ANP Volume III.

5. Support States in the development and updating of their navigation plans.

# ICAO NACC REGIONAL OFFICE

Establish the regional ANS implementation status through an evaluation strategy by area of the BBBs and ASBU elements.

Development of a Regional Plan through the NACC/WG with a target of September 2023.

Support the CAR Region, through the MCAAP Project, for the development of the CAR States air navigation plans.

Joint work with the SAM Office and CAR/SAM States for the exchange of information, lessons learned and to harmonize regional planning.

02  
Basic Building  
Block  
(BBB)

# Basic Building Block (BBB)

The Basic Building Blocks (BBBs) outline the foundations of any robust air navigation system and identify the essential services that must be provided to international civil aviation in accordance with ICAO standards. Essential services are identified in the areas of:

- AGA
- MET
- ATS (ATM)
- AIS/AIM
- CNS
- SAR

## Basic Building Block (BBB)

- It is a standalone framework and not a block of the ASBU framework.
- It represents a baseline and not an evolutionary step.
- Defined by the essential services recognized by ICAO Member States as necessary for international civil aviation to develop in a safe and orderly manner.
- On this baseline, operational improvements must be built

## Evaluation of the Basic Building Blocks (BBBs)

Establish a baseline for the system envisioned in the GANP and ensure a solid foundation for the global air navigation system.

It is a process that should focus on verifying the application of essential air navigation services.

The evaluation of these services should be integrated into the methodology for identifying deficiencies in the regional air navigation plans.

To ensure the provision of seamless air navigation services based on the deployment of interoperable systems and harmonized procedures, States should promote the application of the BBBs through their national air navigation plans as a strategic part of their national planning framework the aviation.

## Basic Building Block (BBBs)

- Meteorological Services
- Aeronautical Information Services
- Search and rescue services
- ATM services
- Aerodrome operation services
- In the new version of the GANP, the necessary CNS infrastructure is integrated to provide all the previous services.

As a regional strategy for the development of the air navigation plans of the CAR States and the identification of regional priorities, it is necessary to identify the ANS implementation status through the **evaluation of the level of implementation** of the **Basic Building Blocks (BBBs)**.

It is important to indicate that the BBBs are considered essential services that States must have operating in a **mandatory** manner, since they comply with the implementation of ICAO standards and that the lack of operation of any of them is considered a **deficiency**.

---

**The evaluation of the BBBs will allow the region to identify:**

- a. Regional deficiencies;
- b. Regional implementation status;
- c. Update the information of the electronic air navigation plan services in its Volumes I and II;
- d. Support with information the execution of priority regional projects.

---

## BBBs EVALUATION FORM

- ✓ The ICAO NACC/SAM Offices have developed a **new format for the evaluation of these mandatory services.**
- ✓ The format includes, in addition to the references to ICAO documentation, the **USOAP Protocol Questions (PQ)** related to the implementation of these services.

# BBBs EVALUATION FORM

How to integrate the data in the table?

				ICAO USOAP relate PQ	ICAO Evaluation	
To be completed by the State.				7	To be completed by ICAO NACC

## BBBs EVALUATION FORM

1	2	3	4	5	6	7	8
<p>Service are the elements to be evaluated according to the area of air navigation, which can be:</p> <ul style="list-style-type: none"> <li>– Meteorological services</li> <li>– Aeronautical information services</li> <li>– Search and rescue services</li> <li>– ATM services</li> <li>– Aerodrome operation services</li> <li>– CNS Infrastructure</li> </ul>	Describe the element to be assessed	Guidance and information concerning the item to be assessed in accordance with the ICAO Annexes.	Provides information from the Annex and other ICAO guidance material regarding the service requirement to be assessed.	<p>Evaluation criteria:</p> <ul style="list-style-type: none"> <li>– Yes: implemented and operational</li> <li>– NO: not implemented</li> <li>– N/A: not applicable</li> <li>– TBD: in process of implementation</li> </ul>	Information to be provided by the State to certify the status of service implementation	Informative data	<p>The last two columns will be the information completed by ICAO according to the evaluation of the information submitted by the State.</p> <p>Sat</p> <ul style="list-style-type: none"> <li>– Satisfactory: the State has correctly implemented the service.</li> <li>– Deficiency: It is a mandatory service that is not operating.</li> </ul>

## BBBs & USOAP Protocol Questions (PQs)

**Safety oversight** is a function through which Member States ensure the effective application of:

- a. **Standards and Recommended Practices (SARPs)** related to safety, and
- b. Associated procedures contained in the **Annexes of the Convention on International Civil Aviation** and related ICAO documents.

<https://www4.icao.int/ganpportal/BBBsUSOAPPQs>

## BBBs & USOAP Protocol Questions (PQs)

- ✓ To demonstrate compliance with these obligations, **the State must carry out documented surveillance, inspections, audits, and follow-up (CE-7).**
- ✓ The State must also **demonstrate the resolution of any security (CE-8)**, including enforcement measures that arise during its surveillance and inspections.
- ✓ The mapping between the **implemented BBBs** emphasizes the capability **implemented by the State of the Protocol Questions.**

## **GUIDELINE MATERIAL FOR ASSESSMENT OF BASIC BUILDING BLOCKS (BBBs)**

### **Introduction**

The Basic Building Block (BBB) framework outlines the foundation of any robust air navigation system. It is nothing new but the identification of the essential services to be provided for international civil aviation in accordance with ICAO Standards. These essential services are defined in the areas of aerodromes, air traffic management, search and rescue, meteorology, and information management. In addition to essential services, the BBB framework identifies the end users of these services as well as the assets (communications, navigation, and surveillance (CNS) infrastructure) that are necessary to provide them.

The BBB is considered an independent framework and not a block of the ASBU framework as they represent a baseline rather than an evolutionary step. This baseline is defined by essential services recognized by ICAO Member States as necessary for international civil aviation to develop in a safe and orderly manner. Once these essential services are provided, they constitute the baseline for any operational improvement.

The BBB framework will be updated every two years taking into account amendments to ICAO provisions. Although an initial draft of the BBB framework is presented online in the GANP Portal (<https://www4.icao.int/ganportal/BBB>), the BBBs will be included in a web-based application in a format similar to the ASBU framework.

The present document contains a series of tables of the five-air navigation areas integrated in the basic building blocks, with the objective that the tables serve as an evaluation of the implementation status of the services integrated therein and identify opportunities for improvement in each of the areas.
