Stakeholder Consultation

- ❑ Regulation should serve the **public interest** and be informed by the legitimate needs of those interested in and affected by it.

- ❑ Consultation should be **done at the earliest stages of** developing a regulation and if possible, at various stages so that it helps Civil Aviation Authority collect data and the results can be used effectively.

Conclusion

The principles of Good Regulatory practices should be used in the regulation of the air transport sector with a view to supporting sustainable economic growth and the development of international air transport.
