## Executive Summary: Economic Impact in Brief

Previous two (2) scenarios and six (6) different paths were restructured with new two (2) scenarios and four (4) different paths.

Figures and estimates herein are subject to substantial changes, and will be updated with the situation evolving and more information available.

The latest estimates indicate that the possible COVID-19 impact on world scheduled passenger traffic for the full year 2020, compared to Baseline (business as usual, originally-planned), would be:

- Overall reduction ranging from **39% to 53% of seats offered by airlines**
- Overall reduction of **2,300 to 3,080 million passengers**
- Approx. **USD 302 to 402 billion potential loss** of gross operating revenues of airlines

The impacts depend on duration and magnitude of the outbreak and containment measures, the degree of consumer confidence for air travel, and economic conditions, etc.

## **International passenger traffic** for 2020, compared to Baseline

- Overall reduction ranging from **48% to 63% of seats offered by airlines**
- Overall reduction of **1,102 to 1,446 million passengers**
- Approx. **USD 194 to 256 billion potential loss** of gross operating revenues of airlines

## **Domestic passenger traffic** for 2020, compared to Baseline

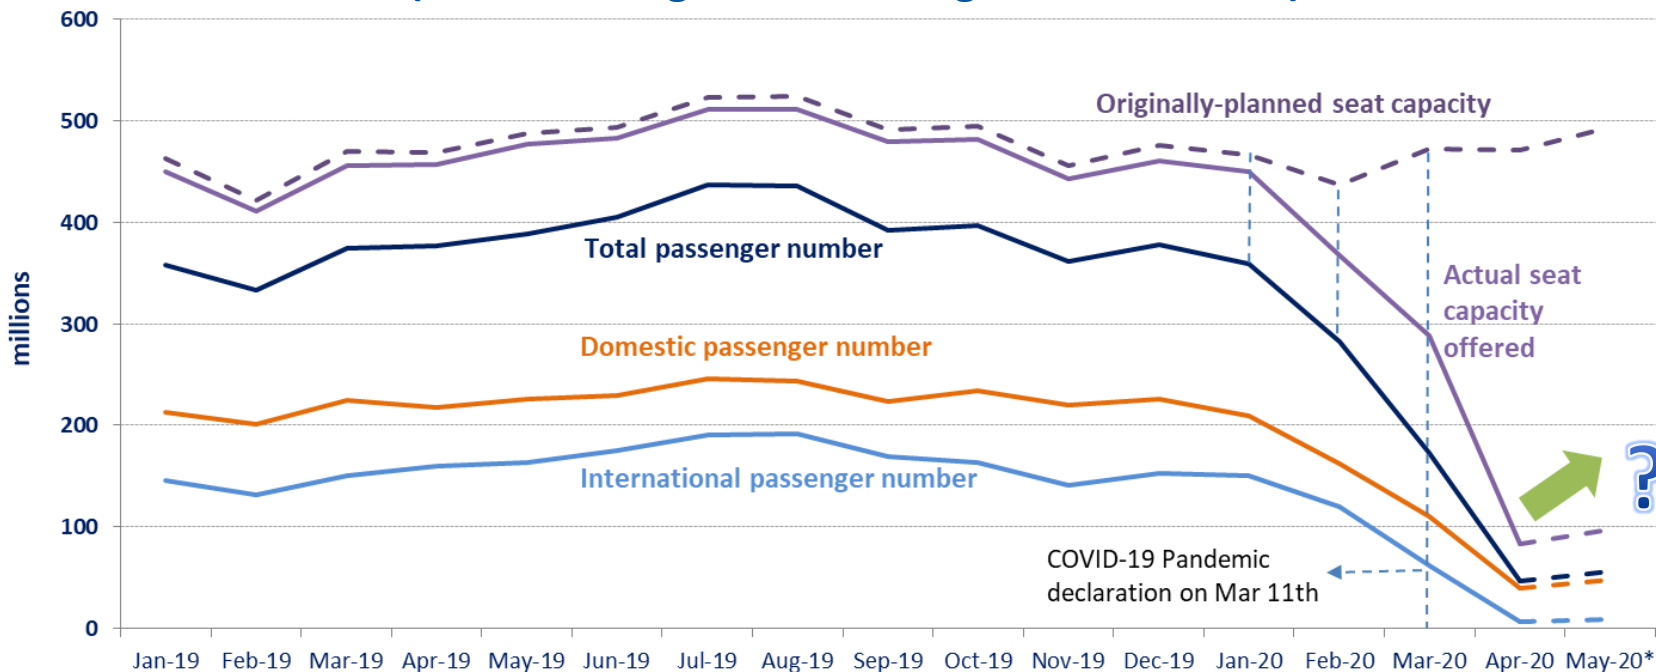

- Overall reduction ranging from **33% to 45% of seats offered by airlines**
- Overall reduction of **1,199 to 1,635 million passengers**
- Approx. **USD 107 to 147 billion potential loss** of gross operating revenues of airlines

## Comparison of passenger numbers and capacity (A silver lining for bottoming out from June?)

# Approximately USD 84 billion passenger revenue loss from Jan to Apr 2020

**Due to extreme uncertainty,  
4 different paths are considered**

## Scenarios for passenger seat capacity compared to Baseline (business as usual)

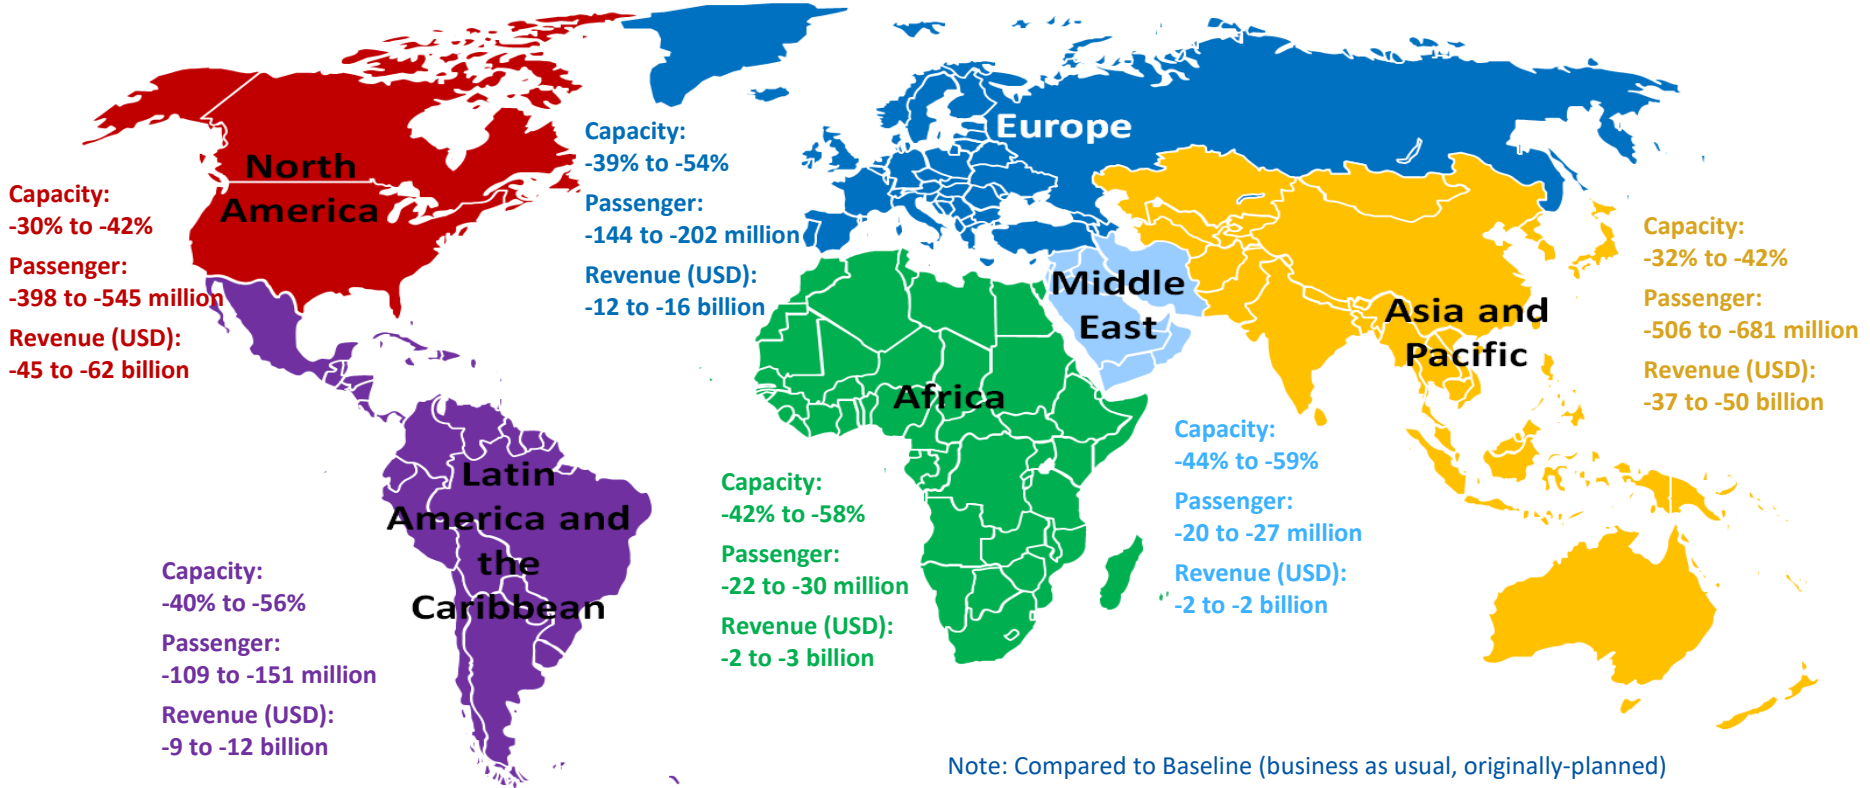

# Estimated impact on international passenger traffic and revenues by region for 2020

Note: Compared to Baseline (business as usual, originally-planned)

# Estimated impact on domestic passenger traffic and revenues by region for 2020

- **Air passenger traffic**: An overall reduction of air passengers (both international and domestic) ranging from 46% to 62% in 2020 compared to 2019 (by **ICAO**)
- **Airports**: An estimated loss of over 50% of passenger traffic and 57% or over USD 97 billion airport revenues in 2020 compared to business as usual (by **ACI**)
- **Airlines**: A 48% decline of revenue passenger kilometres (RPKs, both international and domestic) in 2020 compared to 2019 (by **IATA**)
- **Tourism**: A decline in international tourism receipts of between USD 910 to 1,170 billion in 2020, compared to the USD 1.5 trillion generated in 2019, with 100% of worldwide destinations having travel restrictions (by **UNWTO**)
- **Trade**: A fall of global merchandise trade volume by between 13% and 32% in 2020 compared to 2019 (by **WTO**)
- **Global economy**: A projected -3% contraction in world GDP in 2020, far worse than during the 2008–09 financial crisis (by **IMF**)

# Scenario Building

- Analysis focuses on simultaneous supply shock and drop in demand
  - in a near-term, i.e. monthly profile **from January to December 2020**
  - in terms of scheduled **passenger traffic** globally
- Taking into account the heterogeneity, distinction is made:
  - between international and domestic
  - by six (6) geographical region and/or 50 route groups used in ICAO's long-term traffic forecasts (LTF)
- Analysis is based on forward-looking scenarios, which will be continuously adjusted and updated

## Analytical Consideration

- Geographical disparity of international-domestic passenger traffic mix
- Difference in market size among regions
- Potential difference in resilience and speed of recovery
- Outbreak timing that impacts when traffic would bottom out
- Gap between what is scheduled and actual operations

## International-domestic passenger traffic mix exhibits significant geographical disparity

### Share of international-domestic passenger traffic by region (2019)

**Europe and Asia/Pacific accounted for over 70% of the world international traffic pre-COVID-19**

## Number of International Passengers by Region (2019, based on from/to State)

# North America and China account for over half of world domestic passenger traffic

## Number of Domestic Passengers by Route Group (2019)

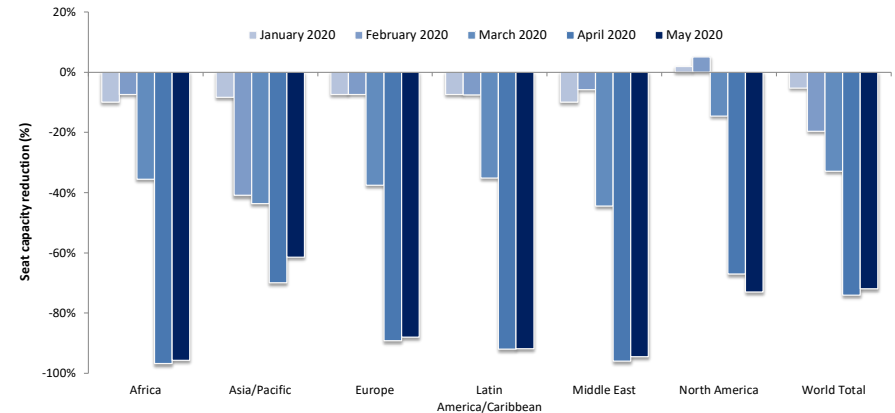

# Domestic passenger traffic may be more resilient than international in some markets

Asia/Pacific and North America have experienced 20% to 25% less decline in domestic passenger traffic than international

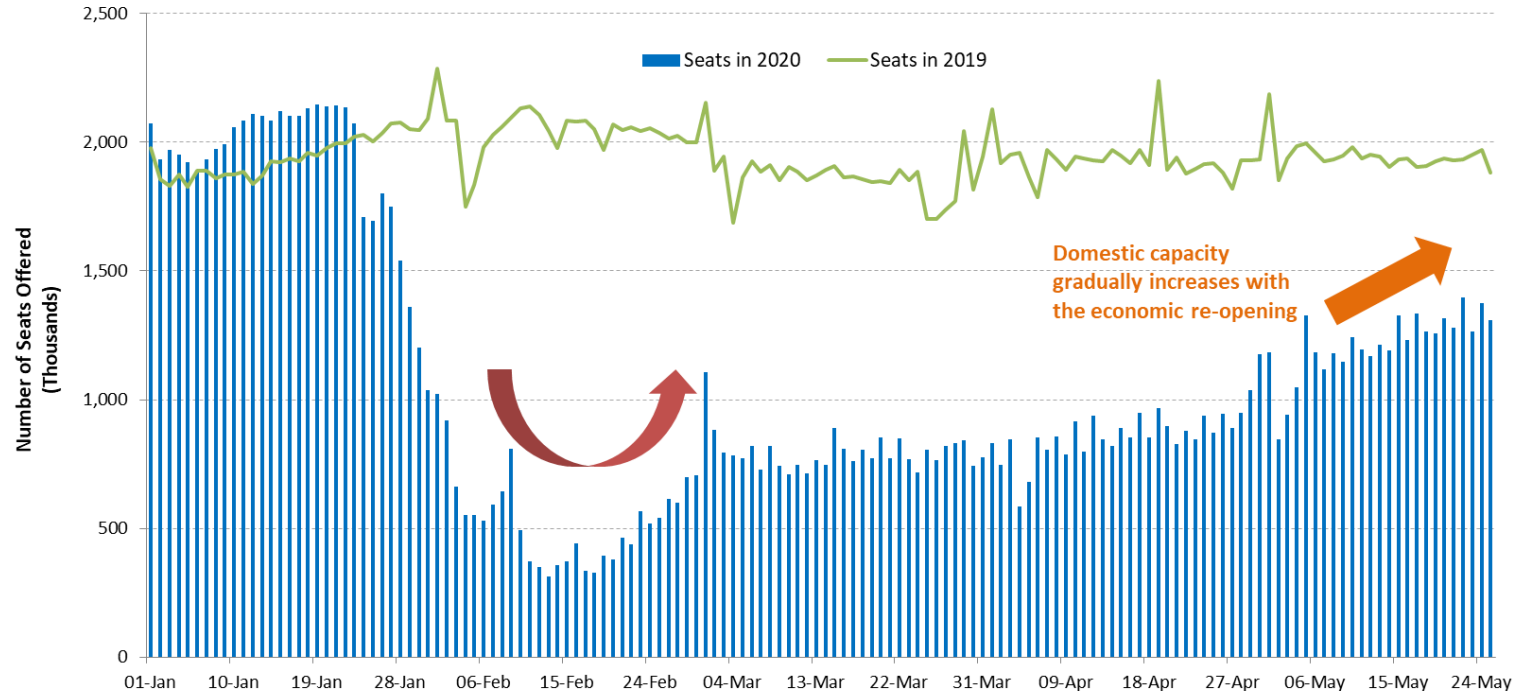

International seat capacity reduction (compared to baseline)

Domestic seat capacity reduction (compared to baseline)

## Domestic passenger traffic in China already bottomed out in mid-February, followed by the slow pace of recovery

**The outbreak timing impacts when traffic would bottom out in each region**

## Capacity evolution of two largest domestic markets China and United States since January 2020

## Regions with higher share of intra-region traffic are expected to recover faster

### Almost 80% of international seats offered in Asia/Pacific and Europe were for intra-regional traffic (2019)

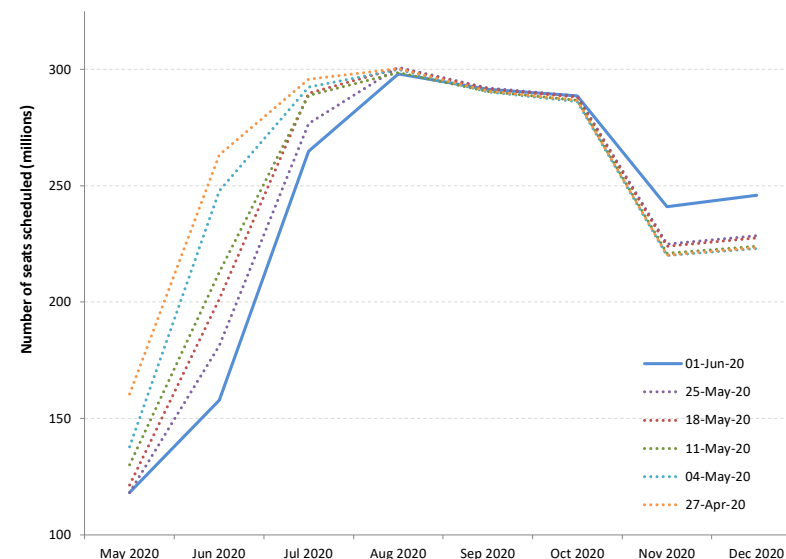

# A gap exists between what is scheduled and actual operations

Airlines announced/planned resumption of flights in early May, however, over half of which were subsequently withdrawn

## Shapes of Economic Recession and Recovery

Informal classification to describe different types of recessions:

- **V-shaped**: normal shape for recession, a brief period of sharp economic decline followed by quick/smooth recovery
- **U-shaped**: prolonged contraction and muted recovery to trend line growth
- **L-shaped (depression)**: long-term downturn in economic activity, steep drop followed by a flat line with possibility of not returning to trend line growth
- **W-shaped**: a double-dip recession, “down up down up” pattern before full recovery
- **“Nike swoosh”-shaped\***: bounce back sharply but blunt quickly (\* Brookings Institution/WEF)

# What “recession shape” can be assumed given uncertainties surrounding the outlook?

- How long will the pandemic last and what will be the severity levels?
- How deep and how long will the global recession be?
- How long will lockdowns and travel restrictions continue?
- How fast will consumer confidence in air travel be restored?
- Will there be a structural shift in industry and consumers’ behaviors?
- How long can the air transport industry withstand the financial adversity?

# Previous outbreaks/pandemics had a V-shaped impact on air transport in Asia/Pacific

The impact of COVID-19 has already surpassed the 2003 SARS outbreak which had resulted in reduction of annual RPKs by 8% and USD 6 billion revenues for Asia/Pacific airlines. **The 6-month recovery path of SARS might not apply to today's situation.**

## Indicative Scenarios and Paths Forward

As overall severity and duration of the COVID-19 pandemic are still uncertain, four (4) different recovery paths under two (2) indicative scenarios are developed:

- **Baseline:** counterfactual scenario, in which the COVID-19 pandemic does not occur, that is, **originally-planned** or **business as usual**
- **Scenario 1:** two (2) different paths (similar to **Nike swoosh- and W-shaped**)
- **Scenario 2:** two (2) different paths (similar to **U- and L-shaped**)
- **Reference:** based on latest airline schedules (similar to **V-shaped**)

- Notwithstanding the elevated uncertainty surrounding the outlook, a scenario analysis could help gauge potential economic implications of the COVID-19 pandemic.
- Scenarios are **not forecasts** of what is most likely to happen. Given rapidly changing circumstances, they are merely indicative of **possible paths or consequential outcomes out of many**.
- The exact path (depth, length and shape) will depend upon various factors, inter alia, duration and magnitude of the outbreak and containment measures, availability of government assistance, consumer confidence, and economic conditions.
- With the situation evolving and more information available, scenarios will be adjusted as necessary.

- International and domestic passenger traffic has separate scenarios/paths
- Scenarios/paths are differentiated in terms of supply and demand, i.e.
  - Scale of output or seat capacity change
  - Degree of consumer confidence that can be translated into demand or load factor as a proxy
- Supply and demand are influenced by:
  - Different timing and speed of recovery by region, international/domestic, and intra-/inter-region
  - Global economic contraction
- No consideration is made to social distancing requirements on aircraft, etc.
- Detailed scenario assumptions are summarized in **Appendix B**

- **Baseline: originally-planned or business as usual**
  - Counterfactual hypothesis that are expected to occur in the absence of COVID-19 pandemic
  - Supply: airlines' originally-planned schedules supplemented by trend line growth
  - Demand: trend line growth of demand from 2019 level
- **Reference: V-shaped**
  - Information-only scenario that reflects airlines' most recent expectation or a “signal” of airlines' plan to the market (not necessarily realistic)
  - Supply: based on latest update of airline schedules filed up to December, which are adjusted weekly by airlines according to the expectation of the evolving situation (quite often managing capacity for a short period due to the uncertainties)
  - Demand: quickly returning to Baseline level

## Scenario 1: Nike swoosh- and W-shaped

- International
  - **Path 1:** Smooth capacity recovery to 80% of Baseline level by December with pent-up demand
  - **Path 1a:** Capacity to start with smooth recovery but then turn back down due to over-capacity
- Domestic
  - **Path 1:** Swift capacity rebound to 93% of Baseline by December pushed by pent-up demand
  - **Path 1a:** Capacity to start with smooth recovery but then turn back down due to over-capacity

## Scenario 2: U- and L-shaped

- International
  - **Path 2:** Slow progression of capacity recovery to 60%, picking up more demand in 4Q
  - **Path 2a:** Recovery to 40% at diminishing speed due to respite and continuous demand slump
- Domestic
  - **Path 2:** Gradual capacity recovery to 80%, picking up more demand in 4Q
  - **Path 2a:** Capacity recovery to 60% at diminishing speed due to sluggish demand growth

In the following analysis, international and domestic scenarios having the same path number are linked with each other, although different combination of scenarios/paths would be possible

## Scenario Analysis

Previous two (2) scenarios and six (6) different paths were restructured with new two (2) scenarios and four (4) different paths.

Figures and estimates herein are **subject to substantial changes**, and will be updated with the situation evolving and more information available.

- Three (3) key impact indicators under four (4) paths of two (2) scenarios:
  - Impact on passenger seat capacity (supply, % change)
  - Impact on passenger numbers (demand)
  - Impact on gross passenger operating revenues of airlines
- Comparison to:
  - Baseline scenario
  - 2019 level (year-on-year)
  - Reference scenario
- Break-down by:
  - International and domestic
  - Six (6) geographical regions

Estimated actual results are used for the key impact indicators from January to May 2020.

**Appendix C** details the key impact indicators while **Appendix D** presents the estimated actual results by route group.

## Impact on Passenger Seat Capacity (Supply)

- Prior to the outbreak, airlines had planned to increase seat capacity in 2020 by **3.5%** (international by **3.2%** and domestic by **3.7%**), compared to 2019.
- According to the latest estimates, passenger seat capacity could instead drop from the above Baseline by **39% to 53%** (international by **48% to 63%** and domestic by **33% to 45%**).
- This capacity level would be **37% to 51%** (international **46% to 62%** and domestic **31% to 43%**) below the 2019 level.
- Biggest capacity reduction (%) is expected to be in Middle East, followed by Africa and Europe.

## Impact on Passenger Numbers (Demand)

- Given the originally-planned seat capacity, passenger demand could have increased **187 million** for 2020 (international **72 million** and domestic **115 million**), compared to 2019.
- According to the latest estimates, passenger demand could instead drop from the above Baseline by **2,300 to 3,080 million** (international by **1,102 to 1,446 million** and domestic by **1,199 to 1,635 million**).
- This demand level would be **2,114 to 2,894 million** (international by **1,030 to 1,374 million** and domestic by **1,084 to 1,520 million**) below the 2019 level.
- The most substantial demand reduction (in total number) is expected to be in Asia/Pacific, followed by Europe, hitting its summer travel peak season.

## Impact on Gross Passenger Operating Revenues of Airlines

- With the originally-planned seat capacity and trend line growth of demand, airlines' gross passenger operating revenues could have increased **USD 22 billion** for 2020 (**USD 12 billion** from international and **USD 10 billion** from domestic), compared to 2019.
- According to the latest estimates, airlines' revenues could instead plummet **USD 302 to 402 billion** (international **USD 194 to 256 billion** and domestic **USD 107 to 147 billion**) below the Baseline, or **USD 279 to 380 billion** (international **USD 183 to 244 billion** and domestic **USD 97 to 136 billion**) below the 2019 level.
- Approximately 60% of revenue loss would be recorded by Asia/Pacific and Europe.

In April 2020, global international passenger capacity so far experienced by **unprecedented 94% reduction** (estimated)

- State/Territory with 100 to 999 confirmed cases\*
- State/Territory with 1,000 to 9,999 confirmed cases\*
- State/Territory with 10,000 to 49,999 confirmed cases\*
- State/Territory with 50,000 or more confirmed cases\*

\*: Coronavirus Disease 2019 (COVID-19) Situation Report by WHO (30 April 2020)

## Number of confirmed cases and destinations with COVID-19-related travel restrictions

As of 18 May 2020, 100% of all world destinations have travel restrictions. About 185 (85%) destinations have completely or partially closed their borders, while 11 destinations (5%) have suspended completely or partially international flights.

**In contrast to the fall in passenger traffic, cargo flights surged with the increased cargo-only operations using passenger aircraft**

## Appendix E: Airline Financial Analysis

Figures and estimates herein are **subject to substantial changes**, and will be updated with the situation evolving and more information available.

Scenarios are based on the assumption that air traffic, measured in Revenue Tonnes-Kilometres (RTKs, both international and domestic), will **decrease by 50% in 2020** compared to 2019
