

Important Points Raised

- Capacity Enhancement/optimization is always paramount
- Capacity declarations should be made for nominal and constrained conditions
- ATFM is not just about capacity enhancement and management but it is about safety
- ATFM is vital for recovery after contingency ATM events
- Multi-nodal Cross Border ATFM is a viable solution for the region
- It is not a one time event it is an evolutionary process
- It is a process not a tool, tools support the process, tools could be as simple as a clipboard and pencil
- It is a facilitation systems to optimize capacity not a delay implementation tool
- Implementation of ATFM is a collaborative process of all stakeholders
- Regulatory framework for compliance
- Weather decision assisting tools and accurate forecasting essential for effective ATFM
- FUA is an enabler for significant capacity enhancement and should be pursued
- Great resources are available to assist with implementation

What Are the next Steps

- In ATFM, what is the role of:
 - State/ANSP after this workshop
 - You as an individual
 - Education. Don't wait until implementation takes place start educating stakeholders now, ATFM is coming as is Cross Border ATFM
- Conform with Framework to ensure sub-regional and regional harmonization
