UNITING AVIATION

Thailand CIV/MIL Cooperation Seminar/Workshop Civil Aviation Introduction

Len Wicks

*Regional Officer, Air Traffic Management,
International Civil Aviation Organization (ICAO)*

Bangkok, 20 November 2015

Contents

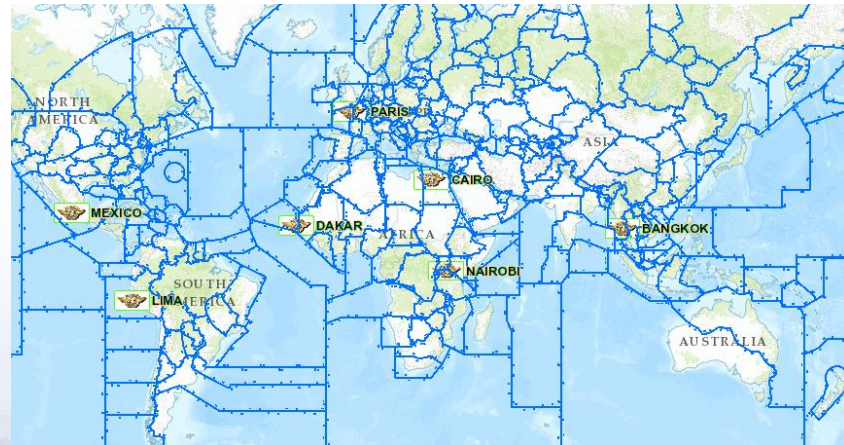

- Introducing ICAO
- Civil Aviation Systems
- Conclusions

Introducing ICAO

- The International Civil Aviation Organization (ICAO):
 - is a specialised agency of the United Nations, overseeing the safety and efficiency of civil aviation
 - is headquartered in Montreal, Canada
 - has seven regional offices

Introducing ICAO

- The ICAO Regional Office:
 - was established in May 1948 at Melbourne, Australia as the Far East and Pacific Office, then moved to Bangkok in 1955
 - facilities are kindly provided by the Royal Thai government
 - has a Sub-Office in Beijing, China

Introducing ICAO

- The ICAO Asia/Pacific (APAC) Regional Office:
 - is responsible for 38 States, and 49 Flight Information Regions (FIRs), plus liaison with USA and France
 - has 31%+ of air travel in its APAC Region
 - manages a region subject to regular natural disasters, and diversity in political governance and economic development

Introducing ICAO

- The International Civil Aviation Organization (ICAO):
 - does not regulate the military
 - determines and disseminate best civil practices
 - serves as a platform to promote international cooperation
 - uses its regional framework to bring civil and military authorities together and raise awareness
 - assist States in the implementation of ICAO policy, provisions, air navigation plan

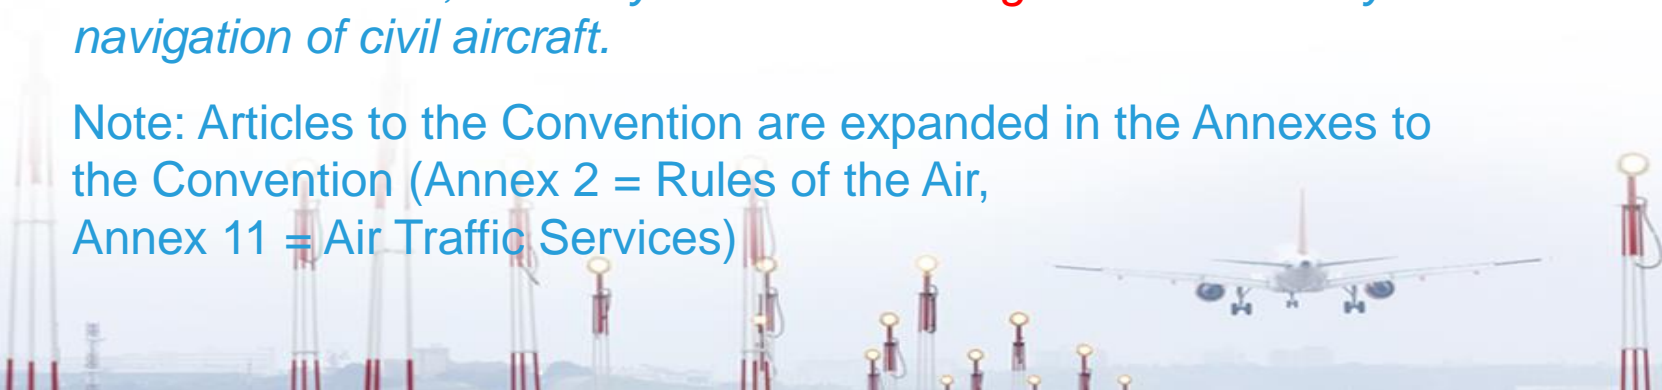

Introducing ICAO

- However, Article 3 (d) of the Convention on International Civil Aviation (‘the ICAO Convention’) states:

*The Contracting States undertake, when issuing regulations for their state aircraft, that they will have **due regard** for the safety of navigation of civil aircraft.*

Note: Articles to the Convention are expanded in the Annexes to the Convention (Annex 2 = Rules of the Air, Annex 11 = Air Traffic Services)

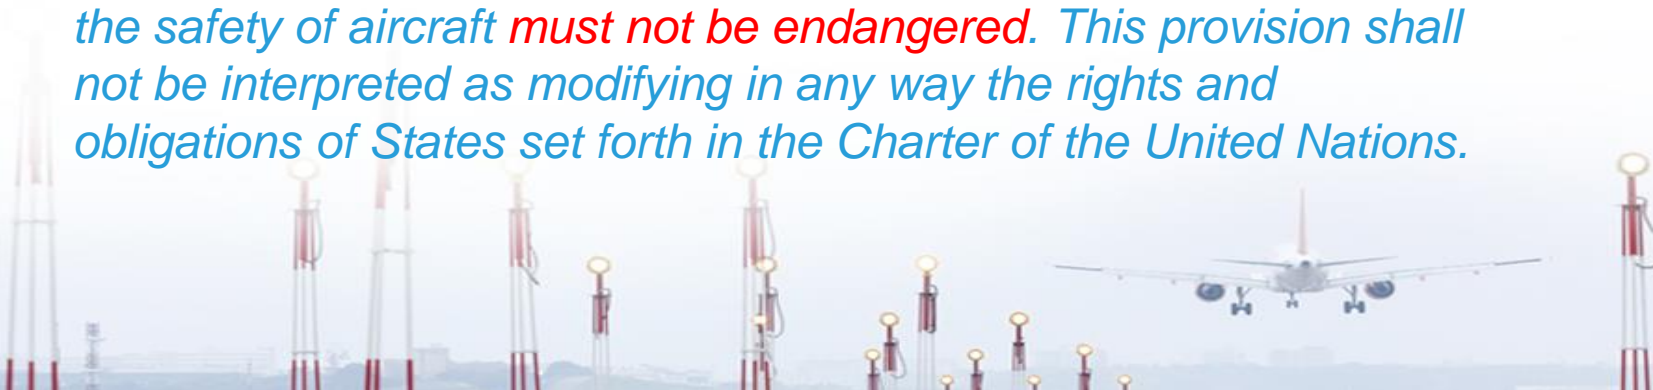

Introducing ICAO

- Also, Article 3 bis states:

*a) The contracting States recognize that every State must **refrain from resorting to the use of weapons** against civil aircraft in flight and that, in case of interception, the lives of persons on board and the safety of aircraft **must not be endangered**. This provision shall not be interpreted as modifying in any way the rights and obligations of States set forth in the Charter of the United Nations.*

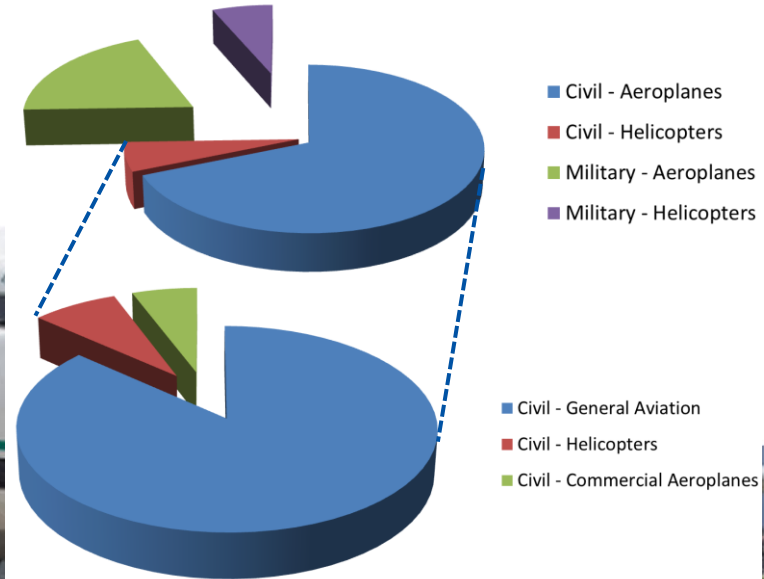

Introducing ICAO

- Below the Convention are Standards and Recommended Practices (SARPs), and Guidance Material (GM)
 - Standards = ‘necessary’ for safety/regularity of air navigation
 - Recommended Practices = ‘desirable’
 - Guidance Material = non-regulatory, related to SARPs and Procedures for Air Navigation Services (PANS)

Civil Aviation System

- Civil aircraft:
 - account for ~75% of all aircraft
 - include about 20,000 aircraft flying commercially worldwide (35,000 new aircraft in 20 years)

Civil Aviation Systems

- Commercial civil aircraft:
 - growth rates in the Asia/Pacific are ~7% per annum (only the Middle East has a higher growth rate)
 - account for ~8-12,000 flights in the air at any moment

2012 operations

Civil Aviation Systems

- Commercial civil aircraft:
 - growth rates in the Asia/Pacific are ~6.7% per annum (only the Middle East has a higher growth rate)
 - account for ~8-12,000 flights in the air at any moment

2020 operations

Civil Aviation Systems

- Airspace is classified to denote its air traffic service level
 - Class A, B, C, D and E are controlled
 - Class F (advisory) and G are uncontrolled

Civil Aviation Systems

- Special Use Airspace (SUA) may be established:
 - in uncontrolled or controlled airspace to superimpose additional flight requirements
 - but not all SUA is associated with military operations, and besides prohibited, restricted and danger areas, some States have other types (e.g.: MOA)

Civil Aviation Systems

- Operations are regulated by civil aviation authorities (CAAs):
 - decrees, regulations, rules, etc. to meet ICAO SARPs and national policies are developed by appropriate government ministries and CAAs (sometimes called DGCAs)

Civil Aviation Systems

- service providers (such as AOT and AEROTHAI) are regulated by CAAs but resourcing and empowerment of the regulator can be a problem in some cases
- some service responsibilities can be unclear (such as Search and Rescue (SAR))

Conclusions

- ICAO is a key body to provide a level of harmonisation for international air travel, even more so in the Asia/Pacific due to the lack of a pan-regional body
- While the military are not bound by civil SARPs, there are articles in the 'ICAO Convention' that apply to the military
- Civil aviation constitutes the majority of aviation activity
