

*International Civil Aviation Organization*

**WORKING PAPER**

**TWENTIETH MEETING OF THE METEOROLOGY SUB-GROUP  
(MET SG/20) OF THE ASIA/PACIFIC AIR NAVIGATION PLANNING  
AND IMPLEMENTATION REGIONAL GROUP (APANPIRG)**

*Bangkok, Thailand, 6 – 9 June 2016*

---

**Agenda Item 4: Planning and monitoring**

**ADDITION OF US NON AOP OPMET DATA AND THE PROVISION OF  
REMARKS AS PART OF THE METAR**

(Presented by the WIFS Provider State)

**SUMMARY**

This paper highlights the addition of 218 non-AOP US METAR/TAF sites to the international US collectives and the establishment of new WMO collectives. The paper also reminds the group in the change of US policy that all US AOP and non-AOP METAR/SPECIs will include remarks at the end of the report.

**1. INTRODUCTION**

1.1 The Washington OPMET data bank provides Operational Meteorological (OPMET) data in support of domestic (i.e., the United States [US]) and international (i.e., ICAO) requirements and obligations.

1.2 The US received a request from the International Air Transport Association (IATA) to add additional OPMET data from US non-Aerodrome Operational Planning (non-AOP)<sup>1</sup> airports for global distribution on the World Area Forecast System File Service (WIFS). This request was reviewed and accepted by the US Meteorological (MET) Authority, which is the US Federal Aviation Administration (FAA).

---

<sup>1</sup> The terms 'AOP' and 'non-AOP' are used in this paper to refer to aerodromes that are either listed or not listed in the Tables AOP in the regional air navigation plans. Note: in accordance with the regional air navigation plans, the 'AOP' aerodromes also appear in Table MET II-2 – *Aerodrome Meteorological Offices*, which names the aerodromes where meteorological service is required. Consequently, there is no regional air navigation agreement for States to provide OPMET data from 'non-AOP' aerodromes, but in many cases this is done on a voluntary basis.

1.3 In addition, the group should recall that the US has changed its policy on the inclusion of Remarks as part of the METAR for global dissemination. This change in policy was announced at the 19<sup>th</sup> MET sub-group of APANIRG (3-6 August 2015 in Bangkok) and has been coordinated with the ICAO MET Panel on how to manage this service in the future with the planned implementation of IWXXM. However, the purpose of this paper is not to go into that discussion of the issues under consideration by the MET Panel. The date for this implementation has not been determined.

1.4 The primary purpose of the paper is to focus on the planned changes for international distribution of OPMET data from AOP and non-AOP airports from the United States to satisfy the operational requirements provided to the US from IATA for Traditional Alphanumeric Code (TAC).

## **2. DISCUSSION**

### **2.1 DISTRIBUTION OF ALL OPMET DATA FROM AOP AND NON-AOP AERODROMES WHERE NWS PROVIDES A TAF**

2.1.1 In light of the increasing use of non-AOP aerodromes by international operators the US will add 218 non-AOP METAR and TAF sites to the US international collectives where OPMET data is currently distributed for international civil aviation. Attachment A to this paper provides the list of non-AOP airports to be added.

2.1.2 There are two challenges on how to provide this information. One pertains to updating the existing Annex 1 Table MET 2A of the SADIS User Guide (SUG), which is the reference source for global dissemination of OPMET information (METAR, SPECI and TAF) required in the World Area Forecast System File Service (WIFS) and the Secure Aviation Digital Information Service (SADIS). This coordination will take place when the MET Panel – Working Group on Meteorological Operations Group (WG-MOG) for SADIS meets in Gatwick, United Kingdom, June 13-14, 2016.

2.1.3 The current US aerodromes listed in SUG Annex 1/FASID Table MET 2A has 78 AOP and 428 non-AOP airports. The US will be adding 218 non-AOP airports to the list in SUG Annex 1/FASID Table MET 2A. The US will be recommending to the SADIS Provider the removal of some 46 non-AOP airports where there is no longer a validated requirement to provide a METAR/TAF report for international operations. Before the US removes these airports the US will validate this with IATA. In total the revised validated listing of US AOP and non-AOP airports in support of IATA will be 678.

2.1.4 OPMET bulletins for the new list of 678 stations issued by the US will use the following WMO (abbreviated heading) series: FT/SA/SPUS21-25 KWBC. The current list of OPMET bulletins for the 418 AOP and non-AOP airports issued under the WMO series FT/SA/SPUS71-75 KWBC will be retired. The US is in the process of updating ICAO DOC 7910 (Location Indicators) to ensure that any the new US non-AOP aerodromes are properly recorded in ICAO Doc 7910.

2.1.5 The US has taken a position that the Washington OPMET Databank will use the same collectives for exchange of information with other Regional OPMET Centers where an exchange policy or agreement exists. This same collective will be coordinated with the SADIS Provider State for distribution on SADIS. Therefore, the collectives on WIFS and SADIS for US airports will be identical.

2.1.6 The meeting should note as provided at the 19<sup>th</sup> MET Sub-group Meeting of APANPIRG that the IATA requirement for the additional OPMET data from non-AOP airports and the requirement to include Remarks the US will be accommodated with the new WMO abbreviated headings as identified in paragraph 2.1.4 above.

2.1.7 Users of US METAR reports are encouraged to access the following link below to retrieve the United States Federal Meteorological Handbook (FMH-1) Surface Observations that documents the METAR code format with Remarks:

<http://www.ofcm.gov/fmh-1/pdf/FMH1.pdf>

2.1.8 The US in reviewing Air Navigation Plan FASID and the ROBEX Handbook for APANPIRG notice that the information on the listing of AOP airports is inconsistent not only between these documents but also with the SUG Annex 1/FASID Table MET 2A. In addition, the US believes the meeting needs to assess how best to list or identify non-AOP airports in the referenced documents and to resolve inconsistencies in the regional guidance material. The US will work with the appropriate group if this action is undertaken.

## 2.2 ADMINISTRATIVE MATTERS FOR WIFS

2.2.1 As a normal routine practice the US encourages States that do not see their METAR/SPECI/TAF reports on WIFS should contact WAFC Washington: To contact WIFS technical support, E-mail: wifs.admin@noaa.gov Phone: 1(816) 584-7200 or 1(877) 280-2811

## 3. CONCLUSION

3.1 The meeting is to take note in the change in US policy to meet operational requirements from IATA to:

- a. Provide Remarks for US METAR distributed globally for both AOP and non-AOP airports
- b. Update the global distribution of METAR/TAF reports from the US to meet IATA's requirement for flight planning.

3.2 The meeting is to take note of the change in WMO abbreviated headings for the provision of OPMET bulletins, including METAR with Remarks from the US. States/Users concerned in APANPIRG are encouraged to access FMH-1 to obtain reference material on the Remarks section of the US METAR.

3.3 The US will provide an implementation date via a NWS Technical Information Notice and will coordinate that information with the Secretariat for further coordination to States concerned in APANPIRG.

3.4 The US will work with the Secretariat on how best to document the distribution arrangements for OPMET data from non-AOP airports from the US located in the APAC Region if agreed by the meeting and to resolve any inconsistency of the relevant information provided in the regional guidance material.

**4. ACTION BY THE MEETING\***

4.1 The meeting is invited to:

- a. Note that the US plans to add 218 aerodromes to the existing list of 428 aerodromes (as listed in SUG Annex 1/FASID Table MET 2A) where the US is required to issue OPMET information (METAR/SPECI, TAF) for availability in SADIS and WIFS in addition to the 78 aerodromes in the US where meteorological service is required in accordance with the provisions of Annex 3 and regional air navigation plans.;
- b. Note that the US plans to cease the issuance of OPMET information (METAR/SPECI, TAF) for availability on SADIS and WIFS for 46 non-AOP aerodromes (currently listed in SUG Annex 1/FASID Table MET 2A), upon confirmation from IATA that there is no operational requirement for these 46 aerodromes;
- c. Note that the US plans to use the WMO abbreviated headings FT/SA/SPUS21-25 KWBC for OPMET issued by the US for international civil aviation and to retire the use of the WMO abbreviated headings FT/SA/SPUS71-75 KWBC;
- d. Assess the requirements for consequential amendments as necessary, in view of a, b and c, above, to relevant regional guidance material in order to incorporate the updated information on the aerodromes and the WMO abbreviated headings for OPMET information issued by the US for international civil aviation, e.g., in the ROBEX Handbook; and
- e. Note that the US plans to include additional information in OPMET data issued for global dissemination in the form of remarks appended to the METAR message, which is not compliant with the Annex 3 provisions for METAR/SPECI [Annex 3, Table A3-2].

\*The effective date for the changes in US OPMET issuance for a to d will be coordinated with ICAO APAC via electronic correspondence with a minimum lead time of no less than 75 days for implementation.
