## Asia

SWIM-enabled applications

Common, regional and local services

Standardized exchange models

Regional governance model

CRV Regional private network

# Setting standards for an open SWIM concept in Europe and across the world

Frequentis leadership in SWIM development

Applications

Services & data  
modelling

Technical  
infrastructure and  
service hosting

1st virtual centre demonstrator –  
cross-vendor

Winner SWIM masterclass

SESAR compliant access point

10+ years provision of AIM service  
for European Aeronautical Database

Deeply involved in standardisation  
(EUROCAE, WMO, ICAO)

## Example: NAPC

First operational SWIM application for civil / military information sharing

### Problem Statement

Decision making in case of renegade, loss of communication, hijacking

Situational Awareness in emergencies, Incidents in the air, sea, land

### The solution

- National Air Policing Centre

### Common operational picture

- It consumes a number of SWIM services and provides the operator with a unified display of information known as common operational picture

### SWIM and legacy sources

- Information is received via SWIM and other legacy, classified sources

# First SWIM in operational civil / military system

NAPC provides the first ever real application and integration of SWIM information

Typical working position

Common operational picture

Voice communication system

Collaboration & decision support

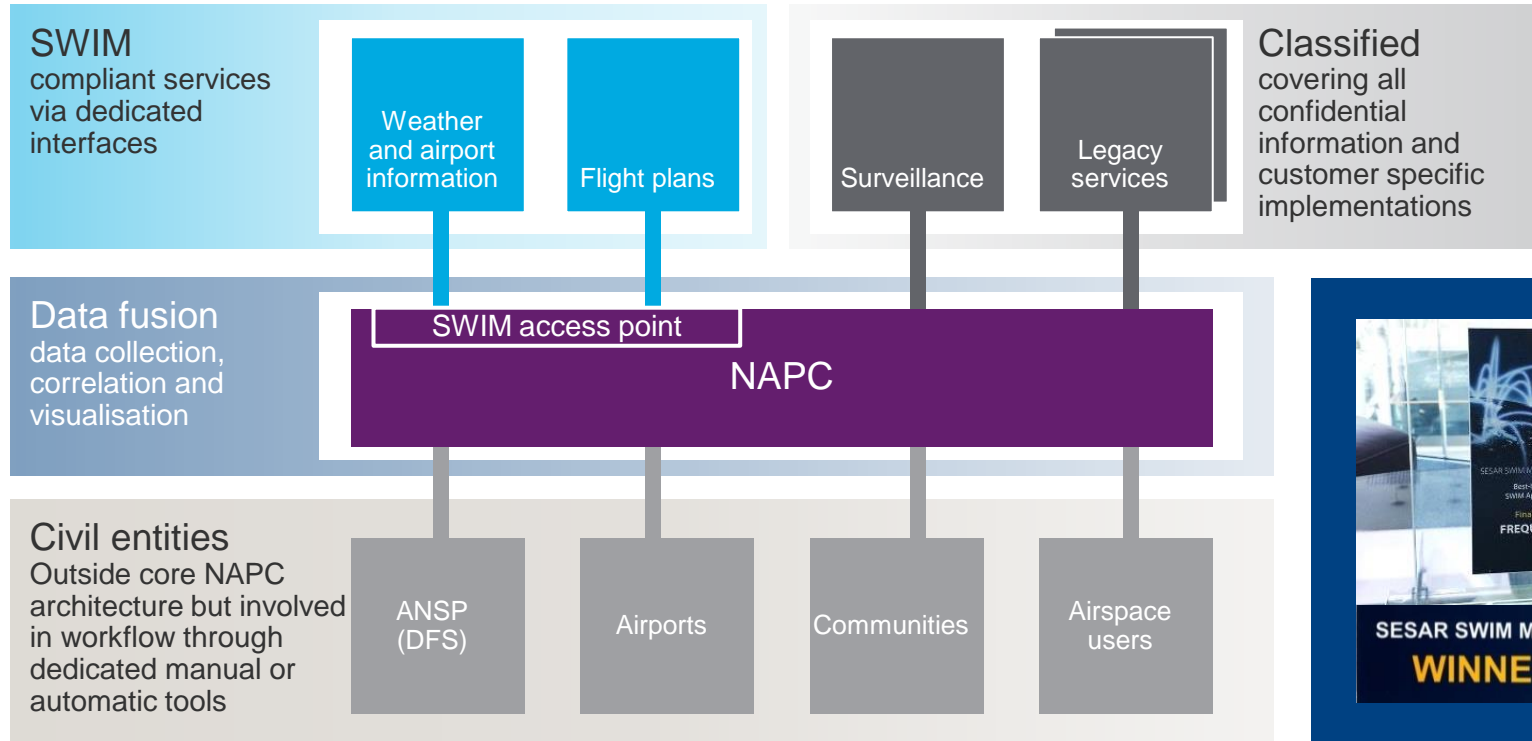

Mobile client

Legal voice and data recording

# NAPC Architecture

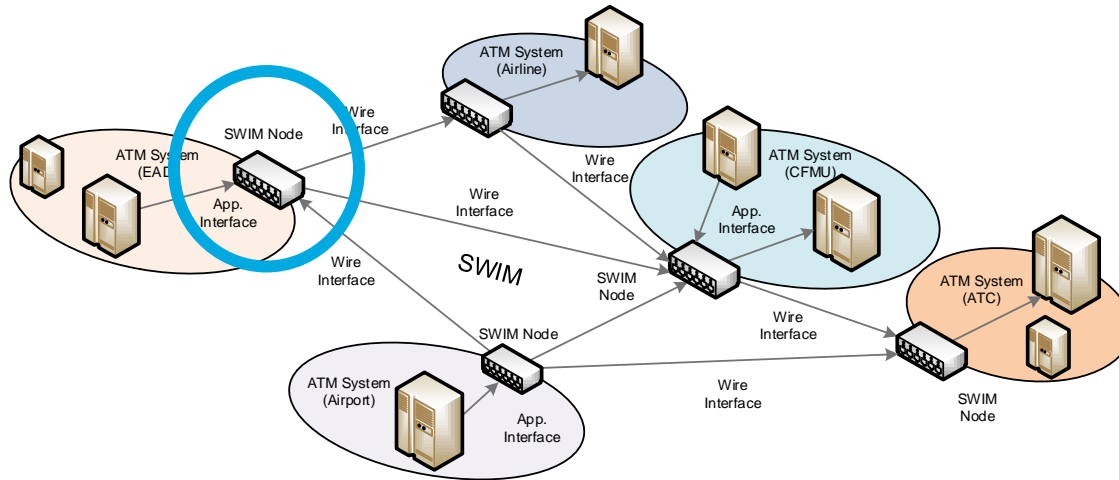

# Example: Aeronautical service – SWIM layer

First operational SWIM implementation:  
SWIM layer AIMS of EAD

Used in EAD for connecting NM systems  
and 3<sup>rd</sup> party systems

Concepts developed in the context of  
SESAR

Productized and implemented for  
operational use

# Example: Digital briefing service

Service orchestration for better informed decisions

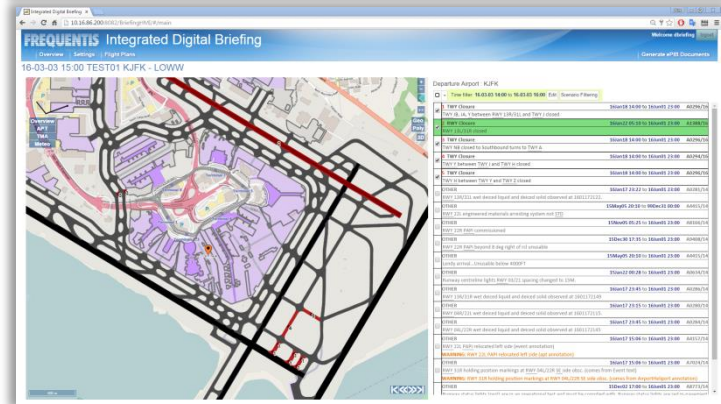

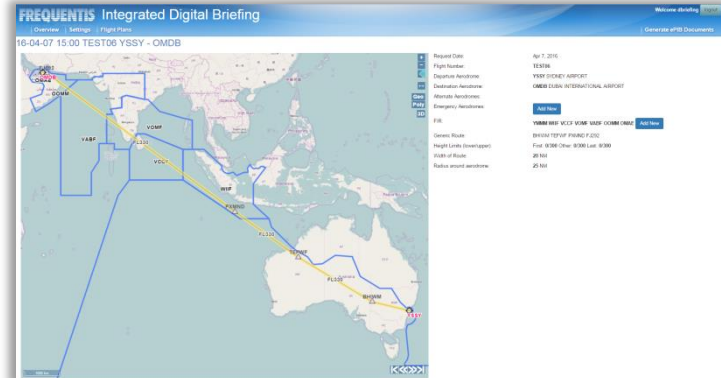

Aggregates and compiles data from existing SWIM services

Purpose: preparation and production of an enhanced pre-flight information Bulletin (ePIB),

Uses data provided by multiple SWIM services over a SWIM-compliant infrastructure

On top **SemNOTAM** introduces a knowledge-based framework that enables fine-grained intelligent semantic filtering

Prioritisation functionality based on temporal, spatial, aircraft/equipment characteristics, user-defined aspects

# Partnering for growth

## We set standards

 <p>Full member and active in 40+ projects</p>	 <p>Member</p>				
 <p>20 years history working with FAA / DOD</p>	 <p>Active in working groups</p>		<p>First virtual centre demo – cross-vendor</p>	<p>SESAR SWIM masterclass winner</p> 	
 <p>Active in various initiatives</p>	<p>CANSO</p> <p>Associate member</p>	<p>RTCA</p> <p>Member</p>		<p>Winner IFATCA technology award</p>	<p>Winner ICNS best paper award</p>

# Active in shaping the future of information management

Strong involvement in information management research and development around the world

projects focussing on  
High Performance Tower

Implementation  
Plan

20 years history working with FAA / DOD  
Contributing to: advanced communication  
data networking; information systems;  
research efforts

EFS – 1<sup>st</sup> system at US Air Force (DoD)  
OASIS – EFS in Alaska  
TFDM – terminal flight data manager  
IVSR – VCS for Towers  
AWIM – airport-wide information  
management  
Dark tower / Virtual Towers

European ATM  
Master Plan

40+ projects

SESAR1

SESAR2020

PCP

CP

## Information management

Applications  
Services  
Technical Infrastructure  
IP Communications  
Governance  
Outreach

ICAO

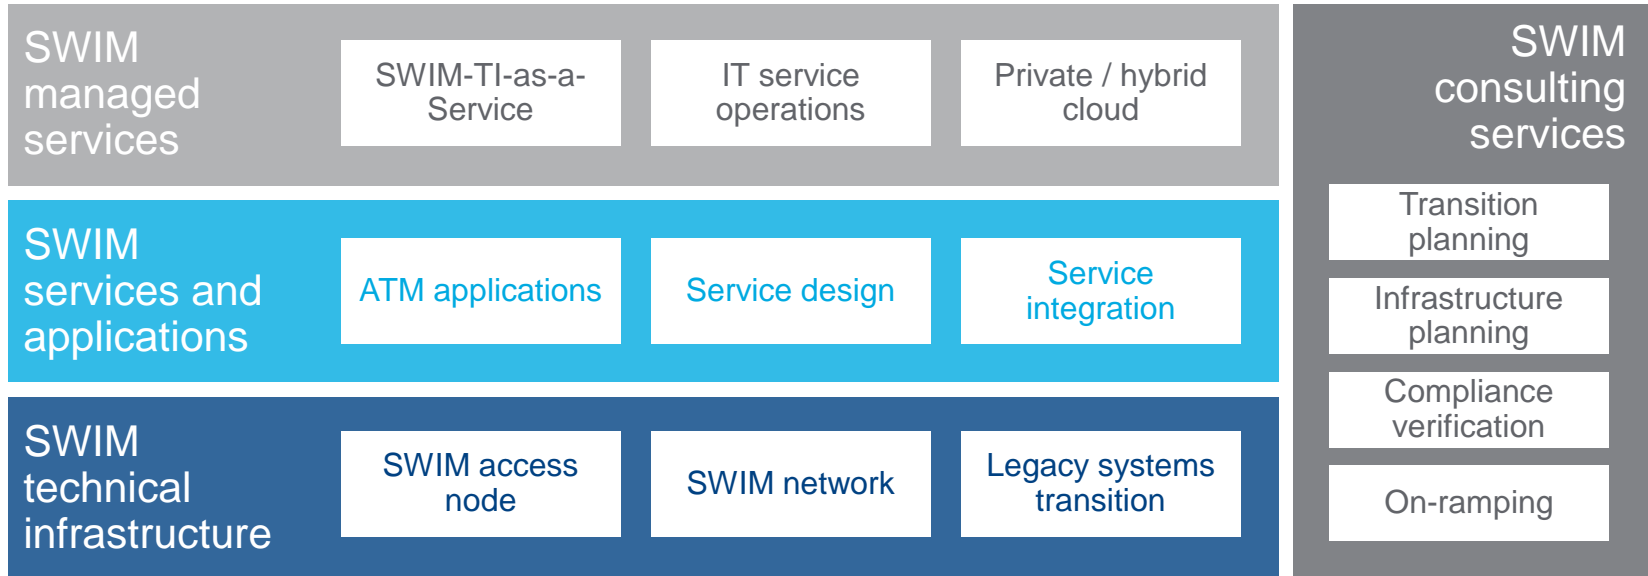

Aviation System Block  
Upgrades

“Globally Interoperable Systems  
and Data” one of the four  
performance improvement areas

FICE – Flight and flow information  
DATM – Digital Air Traffic  
Management / Information  
Management  
SWIM – System Wide Information  
Management  
AMET - Advanced Meteorological  
Information

# Frequentis SWIM service portfolio

# Conclusions

- 1 SWIM requirements in Asia show similarities to Europe. A federated SWIM concept under a regional governance would spur information sharing through the implementation of SWIM services and applications.
- 2 A sound IP communications network is the requirement for reliable information sharing. Intelligent networking and routing secures network performance.
- 3 Standardization is key. Industry is ready for SWIM deployment, but standardization is required for seamless interoperability.
