UNITING AVIATION

# Aviation Infrastructure for Africa Gap Analysis

## Priority Evaluation Items for Air Navigation Services (ANS)

**Presented by Prosper Zo'o Minto'o**

Deputy Regional Director, ICAO, Western and Central African Office

March 2019

## Structure of preliminary analysis

- Gap Area 1: Air Traffic Management (ATM)
- Gap Area 2: Communications, Navigation & Surveillance (CNS)
- Gap Area 3: Aeronautical Information Management (AIM)
- Gap Area 4: Aeronautical Meteorology (MET)
- Gap Area 5: Search and Rescue (SAR)

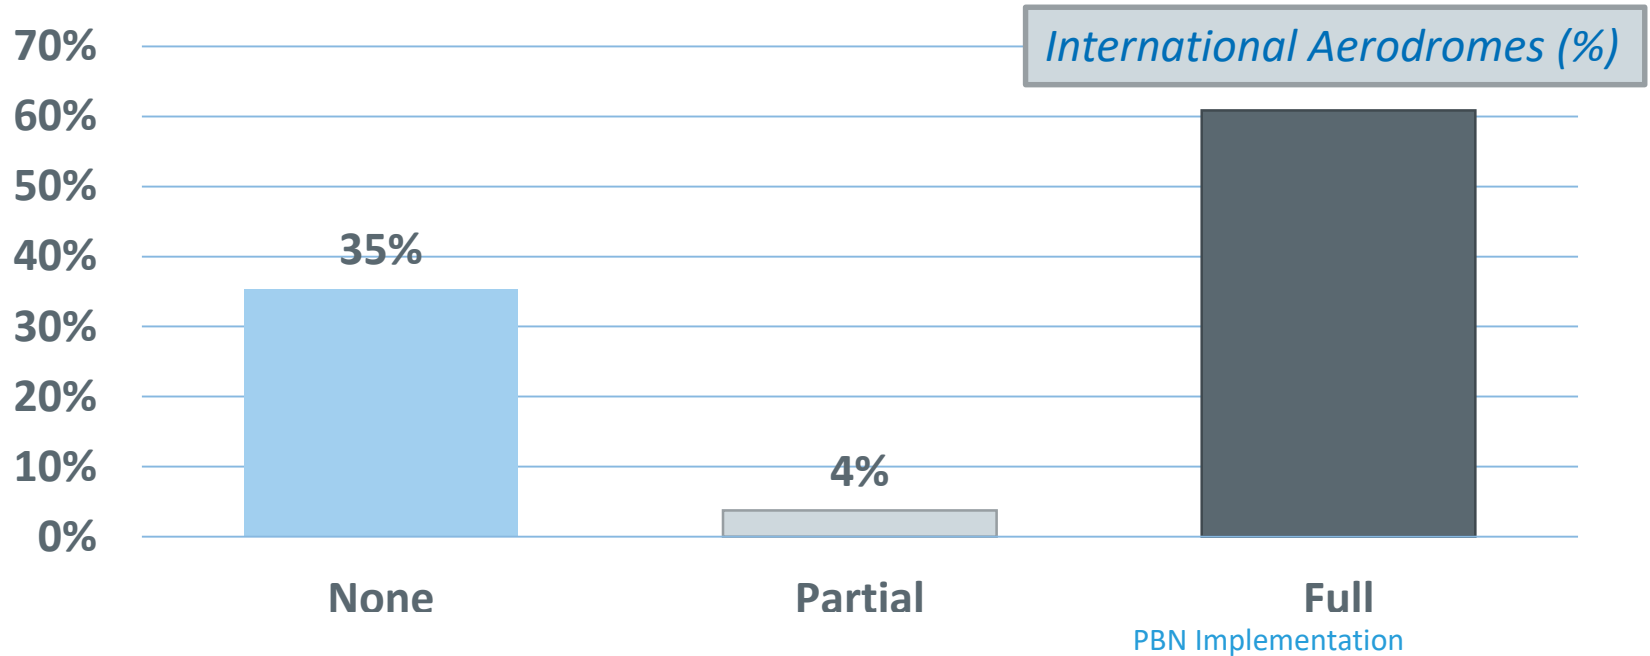

ICAO

UNITING AVIATION

# Gap Area 1: ATM

## Implementation Gap-ATM PBN Implementation

## Implementation Gap-ATM PBN Implementation

- 35% of int. aerodromes have no performance based navigation (PBN) approaches
- 61% of the int. aerodromes have PBN on all instr. runway ends
- 11% of int. aerodromes with visual approach procedures only

## Implementation Gap- ATM

## Implementation Gap- ATM

- Low ATS Units Capacity in terms of across the Region
- Low pace of development and implementation of ATM Master Plan

## Implementation Gap – ATM (cont.)

## Implementation Gap – ATM (cont.)

- PBN Implementation as per Assembly Resolution A37-11 is relatively high but needs to be completed
- CCO/CDO implementation has not started to take full advantage of PBN approach procedures

| ICAO

UNITING AVIATION

## Gap Area 2: CNS

## Infrastructure Implementation Gap – Ground/Ground Communications

## Infrastructure Implementation Gap – Ground/Ground Communications

- High rate of implementation of the AFI AFTN Plan
- Relatively low progress in implementing AMHS circuits and low interconnection of existing AMHS systems
- Very low progress in implementing AIDC (OLDI) circuits interconnection between ATM systems
- Implementation and interconnection of VoIP not started although planned by APIRG

## Infrastructure Implementation Gap – Air/Ground Communications

## Infrastructure Implementation Gap – Air/Ground Communications

- Good VHF & HF coverage of the airspace along the routes with some casual shortage of availability and quality
- Progress in implementing CPDLC across Flight Information Regions
- Implementation and interconnection of VDL & HF DL not started although planned by APIRG

## Infrastructure Implementation Gap – Navigation

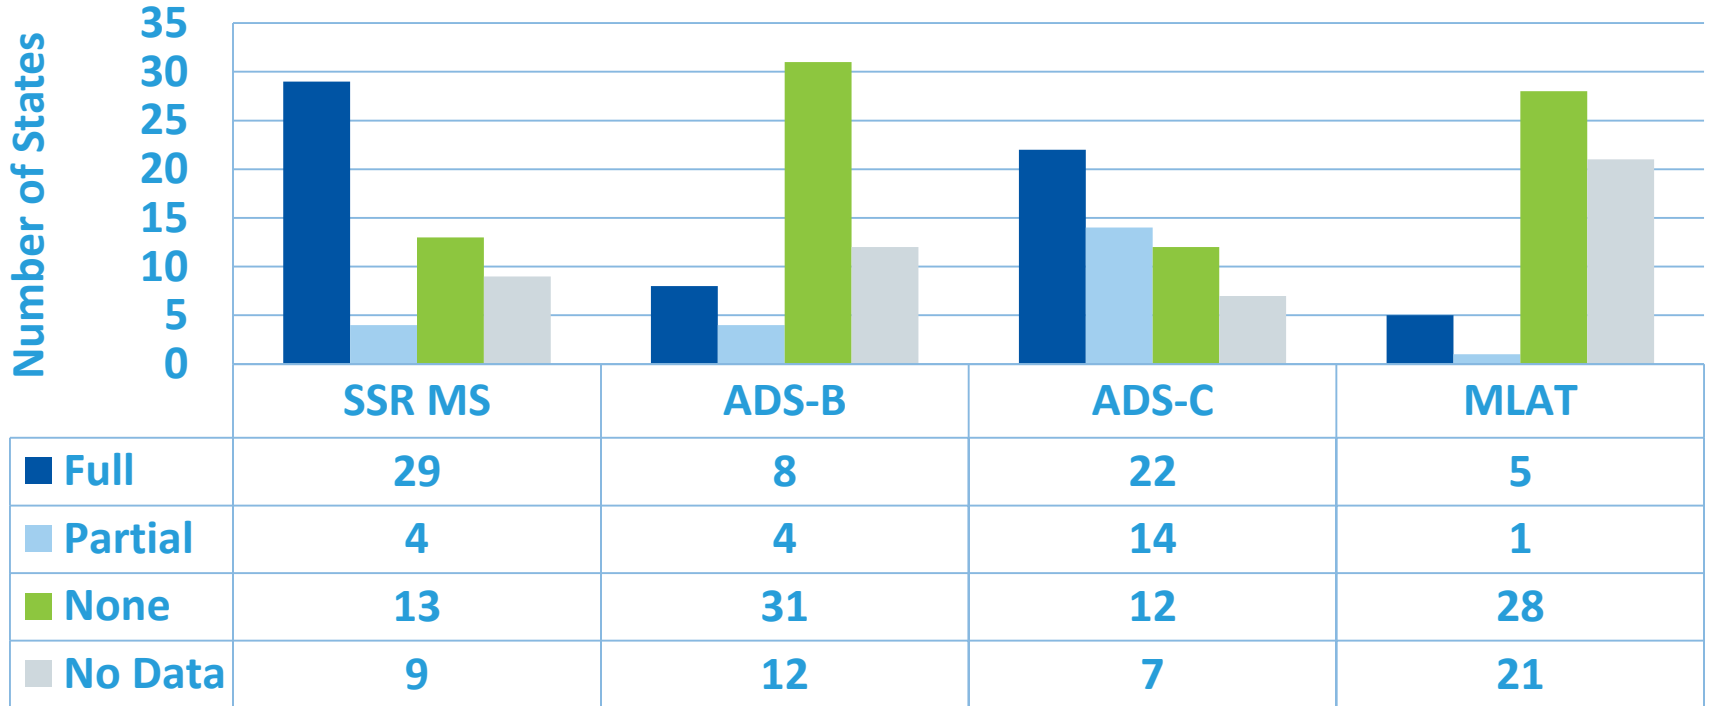

## Infrastructure Implementation Gap – Navigation

- Good pace of implementation conventional Navaids (VOR, DME, ILS)
- GNSS core constellations highly used although outstanding lack of approval.
- Low pace of implementation of SBAS as compared to ABAS (SBAS subjected to impact analysis according to APIRG GNSS strategy)

## Implementation Gap – Surveillance

## Implementation Gap – Surveillance

- Progress in implementing Secondary Surveillance Radar (SSR) Mode S
- Low pace of implementation of ADS-B stations
- Progress in implementing ADS-C across Flight Information Regions
- Low level of implementation and operation of MLAT stations

## Implementation Gap – Spectrum

## Implementation Gap – Spectrum

- No implementation of spectrum monitoring and reporting systems although increasing number of interference occurrences.
- Reports on such occurrences are requested by ITU to address cases of harmful interferences to aviation.

ICAO

UNITING AVIATION

## Gap Area 3: AIM

## Implementation Gap – AIM

## Implementation Gap – AIM

- Progress made of AIXM Based e-AIP implementation
- Progress made in implementation of e-TOD
- AIS/AIM Transition Plans developed

ICAO

UNITING AVIATION

## Gap Area 4: MET

## Implementation Gap – MET

## Implementation Gap – MET

- Increased availability rate of OPMETs
- Low pace of implementation of Volcanic Ash contingency procedures

ICAO

UNITING AVIATION

## Gap Area 5: SAR

## Implementation Gap – Search and Rescue

## Implementation Gap – Search and Rescue

- SAR Operation: Low pace of establishment of effective RCCs/RSCs
- SAR Agreements: Low pace of signature of effective SAR Agreements as per An12 provisions.

## Aggregated Implementation Gaps - ANS
