LDS2: Explaining the concept and
dyspelling myths.

October 2014, Montreal
Jasper Mutsaers

LDS 2: The concept

- LDS2 will be a new and optional LDS, the current LDS remains intact.
- A central concept for LDS2 is that it will be a new version that will allow for optional data to be implemented as separate and individual applications on the chip.
- LDS2 will have three applications – visas, travel stamps, and additional biometrics.
- The new applications are considered optional components of the eMRTD and can only be deployed under the direct policy control of the travel document issuing State.

Access Rights

Description	Read	Write/Append	Update	Delete
Electronic Visas	1	1 (incl.e.g.cancellation)	n/a	n/a
Travel Records	1	1 (incl. e.g. correction)	n/a	n/a
Additional Biometrics	2	2	2	2

1. States and defined organisations : as long as they are identified, they would have access. However, there is a possibility of denying access by a default allow policy with selective denial policy by States.
2. Defined states and organisations, default deny policy, requires specific authorization from Issuer or holder, a default deny policy with selective allow.

In this table 'cancellation' means that the data is appended with a record which indicates that a certain visa is cancelled.

NTWG Working group on LDS

- Relunched in January 2014;
- Government participants from GER, FRA, UK, US, CAN.
- Participants ISO
- Reports for NTWG and working paper TAG

Work items Working group

- Development of a (global) certificate policy.
- Develop Business Cases with the objective to raise awareness of the benefits of LDS2 adoption by States.
- The design and implementation of a demonstrator on LDS2.
- Technical specifications.

Future Areas of Work

- Benefits vs Drawbacks
- Reactions from Border Control
- Practical Data
- Electronic Visas
- ePassport Reading Applications

Next steps

- Stakeholder Engagement
- Strategic Communications
- Specifications Development

Thank you
