IRIS eCover

- ❖ Durable, Flexible and Tear Resistant
- ❖ Book cover is made of fabric, making it tear resistant and flexible. The thin and flat eInlay ensure trouble-free folding and closing of passport books
- ❖ Fully Compliant with International Standards, Performance-tested for durability, passed IRIS' benchmark tests , exceed ISO/IEC 10373 and ICAO recommended durability tests with 3rd party accredited labs
- ❖ Compatible with All Passport Book Making Machines in the market
- ❖ Optimum Protection against Counterfeiting and Fraudulent Alterations , Authorities will be aware of possible fraud if there is any tearing force applied to the inlay resulting in instantaneous damage to the antenna and chip module
- ❖ Excellent Track Records Proven with Successful Implementations across the world.

IRIS eCover

- 2-up inlay and size matching all passports manufacturing equipment. Other formats are available upon customer request (1-up, 3-up)
- Can be used with a broad range of glues
- Thin inlay construction allows better heat dissipation when electrical energy is converted to heat during high frequency read-write operation to the chip module
- Customizable with different antenna designs, be it etched or printed antennas
- Support a wide range of embedded cryptographic chips

Why IRIS eCover?

Longest Life Span
Independent Tested

Patented technology to protect chip from
impact damage

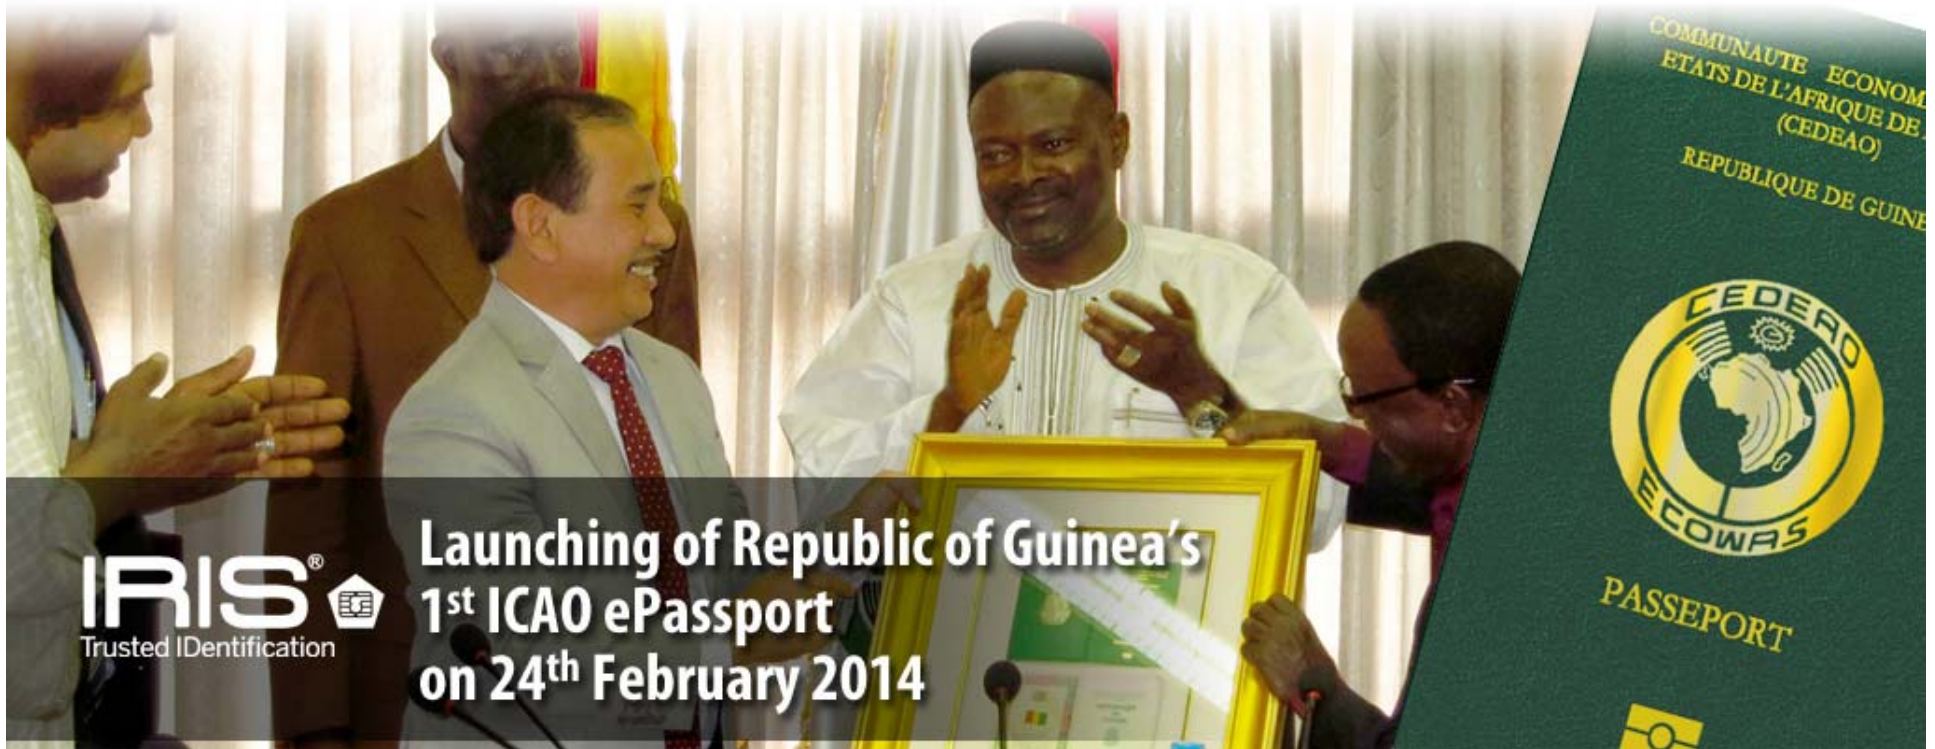

Trusted by Authorities & Governments Worldwide

28 countries worldwide...

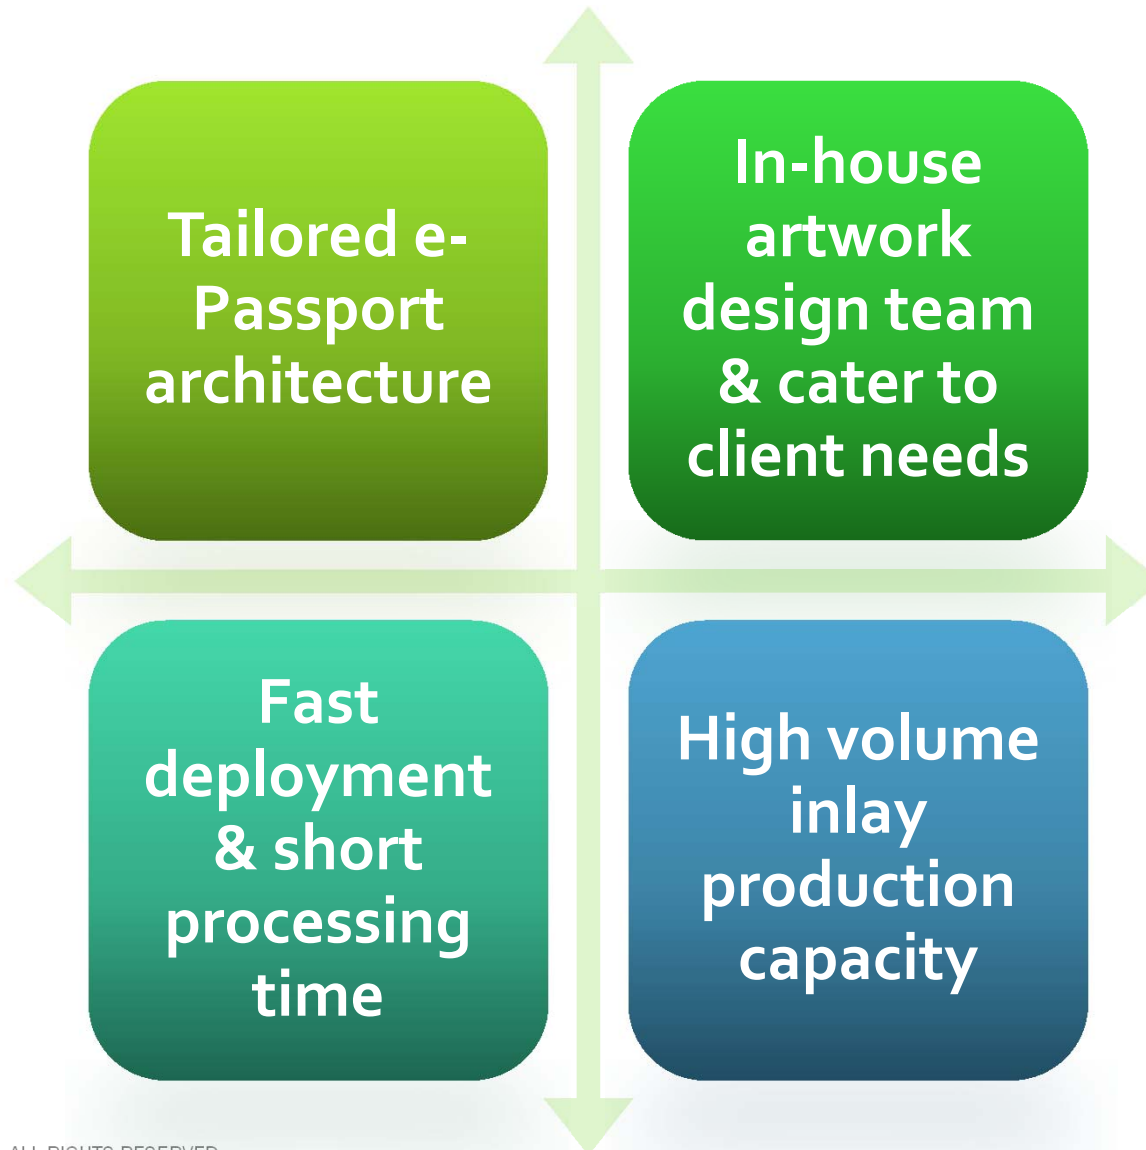

Latest Project: Republic of Guinea

**Launching of Republic of Guinea's
1st ICAO ePassport
on 24th February 2014**

- 15 years contract with Republic of Guinea
- To supply & implement secure chip technology solutions including ePassports, visa, permanent residence identification card & all its related software & hardware
