

Mid-Air Collision SET Status & Next Steps

PA-RAST/29, Fort Lauderdale
22-24 August 2017

MAC Team Status

- History
 - **3 June 2016:** MAC Team's kick-off;
 - **2016:** Definition of working plan, MAC Team's objectives, rationale for MAC DIPs in CAR/SAM Region, membership list, preliminary 7-Step work methodology;
 - **PA-RAST/27:** Updated DIPs list, focus on DIPs #2 and #4
 - **PA-RAST/28:** Promotion of working methodology (Bolivia)

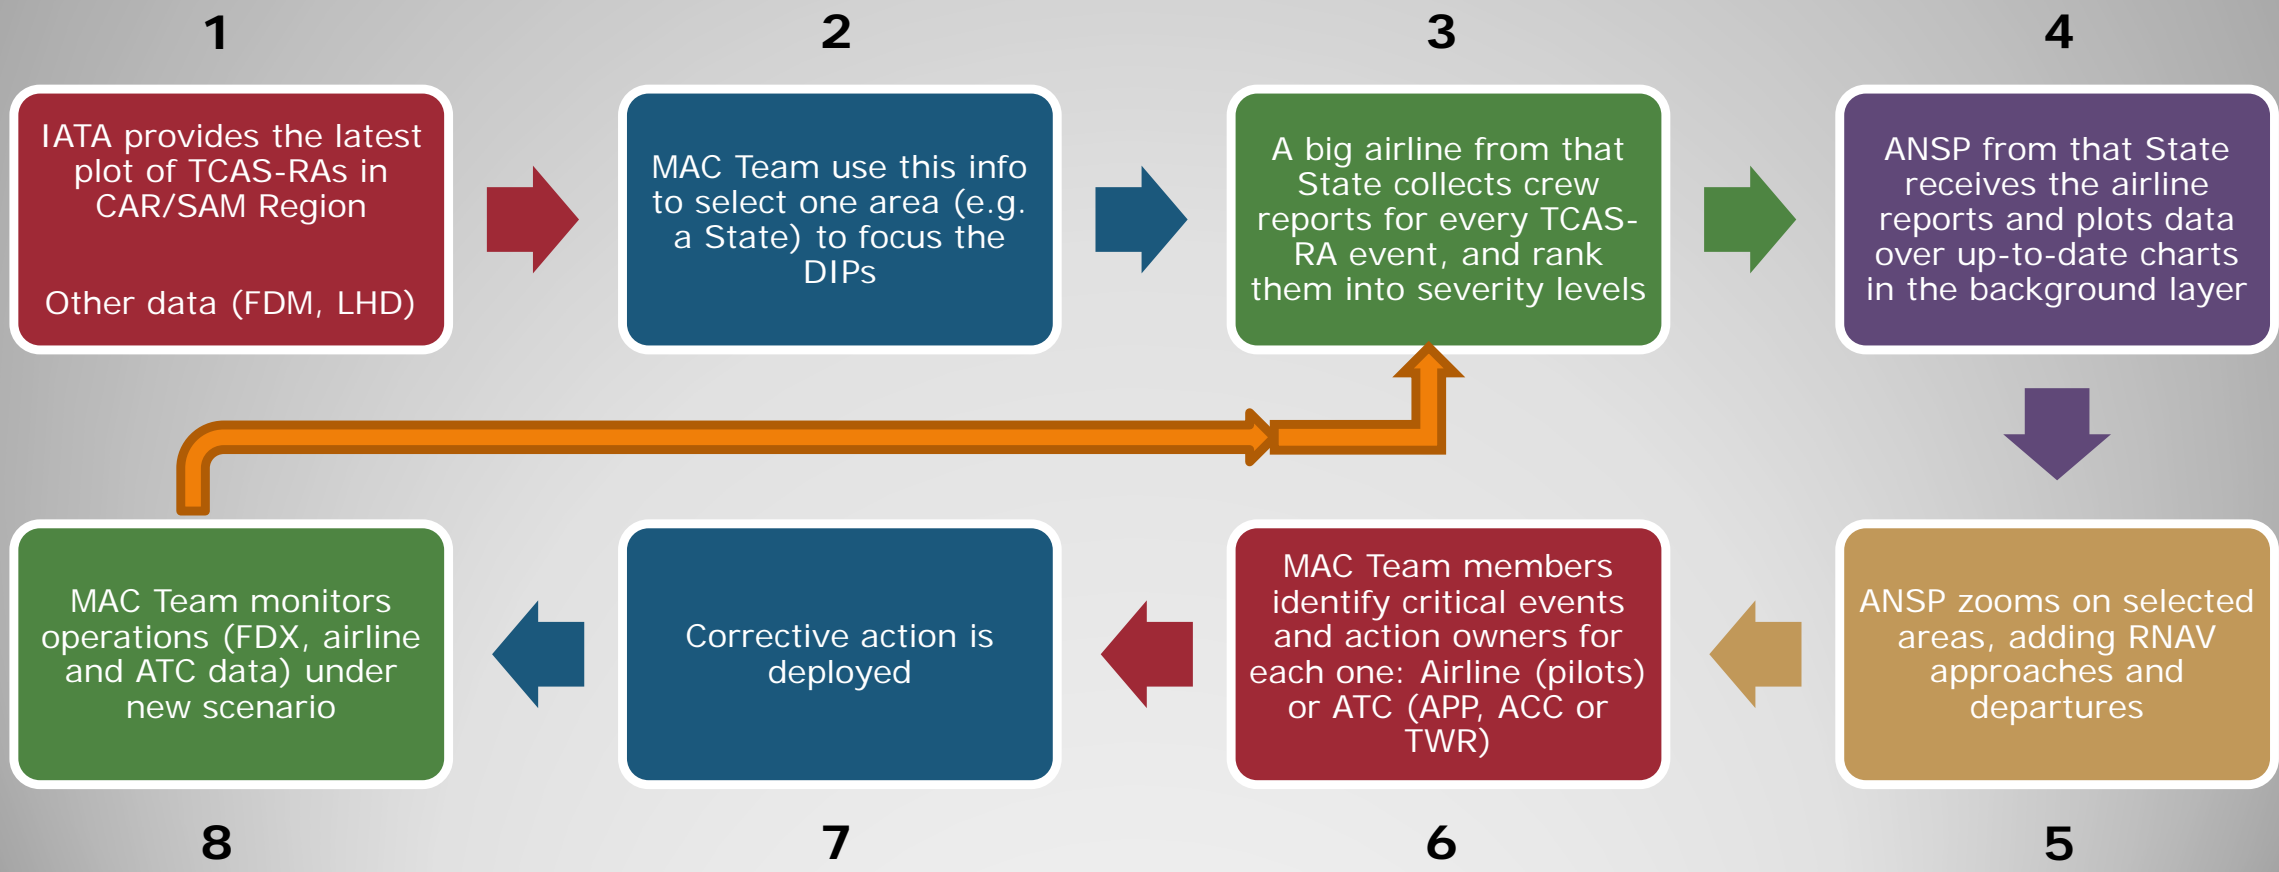

MAC Team Membership

Airbus	ALTA	Boeing	CANSO	CARSAMMA
ECCAA	EMBRAER	IATA	ICAO	IFALPA
IFATCA	A4A	Avianca Brasil	GOL	Azul
United Airlines	ANAC- Argentina	ANAC- Brasil	DECEA	TC-CA
DGAC-Chile	Aerocivil	DGAC- Costa Rica	CAA- Trinidad	FAA

MAC DIP Cycle (Reactive Approach)

APPROACH 1

Running the Cycle

APPROACH 1

State 1

- Airline 1
- Airline 2
- Airline 3
- ...

State 2

- Airline 1
- Airline 2
- ...

State 3

- Airline 1
- ...

Adoption of Existing Recommendations (Proactive Approach)

APPROACH 2

Candidate DIPs for Immediate Development

Item	Subject	Category	Affected Stakeholder(s)	Reference Material	MAC Team Champ
1	Implement the following recommendations: - Update SOPs to reduce likelihood to level busts (e.g. reduce vertical speeds close to the end of climb); - Reduce flight deck workload by avoiding all activity not directly related to the safe conduct of the flight; - Ensure clear procedures for altimeter cross-checking and approaching level calls; - Always confirm the clearance if any doubt exists on the flight deck; - Always report the level cleared to when checking in on a new frequency while in the climb or descent.	Training/Procedures	Airlines	Eurocontrol's "Action Plan for the Prevention of Level Bust" (file: ActionPn.pdf)	TBD
2	Incorporate Eurocontrol's Level Bust Toolkit (30 minute e-learning module and Top Tips) into the flight crew and ATCO training programs.	Training/Procedures	Airlines / ANSPs	Eurocontrol's "Level Bust Toolkit" http://www.skybrary.aero/index.php/Toolkit:LevelBust (file: Top Tips.pdf)	TBD
3	Verify current Call Sign designation rules and update them according to best practices, preventing communication flaws.	Regulation	National CAAs / ANSPs	Eurocontrol's "Call Sign Similarity Rules" and BCAST's MAC Team DIP	TBD
4	Incorporate AC90-48D (Pilot's Role in Collision Avoidance) content into the flight crew training programs.	Training/Procedures	Airlines	FAA AC90-48D (file: AC_90-48D_CHG_1.pdf)	TBD
5	Radio Discipline: use standard ICAO phraseology.	Regulation	National CAAs / ANSPs	Eurocontrol's "Action Plan for the Prevention of Level Bust", A Quick Reference Guide for Commercial Air Transport Pilots (PhraseologyManual.pdf)	TBD
6	Radio Discipline: avoid giving multiple clearances in the same transmission	Training/Procedures	National CAAs / ANSPs	Eurocontrol's "Action Plan for the Prevention of Level Bust", Top 5 Tips (TT4.pdf)	TBD

Where are we now?

- Idea is to run both approaches in parallel.
- Challenges:
 - Approach 1 has strong dependency on national ANSP and Airlines to cross-check relevant data (TCAS-RA, LHD, etc.)
 - Ideally for the PA-RAST, cases should be related to international traffic (domestic cases might be also relevant)
 - Inclusion of Carsamma data in hot spots identification

Where are we now?

- Approach 1 DIPs:
 - Tentative initial work in Colombia (NAST);
 - BCAST is working on identified hot spots – applicability to intl. flights TBD
- Approach 2 DIPs:
 - (#2) Adoption of Eurocontrol's "Level Bust Toolkit": es / pt_br transl.
 - (#3) Review of Call Sign designation rules and "confusion avoidance" mechanism: BCAST case is moving forward
 - (#4) Survey for adoption of AC90-48D: content is on the way.

Moving forward

- Restore virtual meetings schedule ('recipe')
- Promotion of national safety teams works
- Evaluate new cases for DIPs
- Tools to work with (SurveyMonkey, GoToMeeting, etc.)
- Update DIPs #2, #3 and #4 arrangements

Moving forward

- DIP #2: “Incorporate Eurocontrol's Level Bust Toolkit (30 minute e-learning module and Top Tips) into the flight crew and ATCO training programs.”
 - The toolkit has been translated to Portuguese (BCAST)
 - Need to confirm translation to Spanish has been done/validated
 - Publishing in the RASG-PA Website and promotion strategies among relevant audience

Moving forward

- DIP #3: “Verify current Call Sign designation rules and update them according to best practices, preventing communication flaws.”
 - Assess the situation in the region (State-level assessment of current procedures for Call Sign designation)
 - The method employed by the BCAST MAC Team is one possible solution – BCAST can compile the necessary information

Moving forward

- DIP #4: “Incorporate FAA AC90-48D (Pilot's Role in Collision Avoidance) content into the flight crew training programs.”
 - Review final text of survey to assess the situation in the region (State-level assessment of AC contents awareness)
 - IATA (with support) will “spread the word” of the survey
 - Compile results for next meeting: initiate studies of mitigation strategies (IOSA, specific action with local carriers, etc.)

Final thoughts

- Integrate efforts with the FSF's GSIP?
 - This year's webinars have provided good discussions around the promotion of reporting – MAC Team is directly benefited by expanding the availability and use of reports.
- Work on metrics for SPIs?
 - The Team could start discussing a process for safety performance indicators related to MAC? (this area is currently out-of-scope of the GASP)

QUESTIONS / COMMENTS?

THANK YOU / OBRIGADO / GRACIAS
