Global Aviation Safety Plan

Marcelo Orellana

Regional Officer, Flight Safety Implementation

Mexico /February 18, 2020

ICAO

SAFETY

What is the GASP?

- ✈ The Global Aviation Safety Plan (GASP), Is ICAO's strategy for the continuous improvement of aviation safety and aims to continually reduce aviation-related fatalities, and the risk of fatalities, by guiding the development of a harmonized safety strategy and the implementation of aviation safety plans at the regional and national levels.

ICAO

SAFETY

What is the GASP? Cont.

- ✈ ICAO has been working collaboratively with States and other key stakeholders to develop the 2020-2022 edition of the GASP, which sets forth ICAO's Safety Strategy for the next decade. The 2020-2022 edition of the GASP was approved at the 40th ICAO assembly.

ICAO

SAFETY

The GASP Stablishes provisions for:

GASP GOALS

GASP 2020-2022 GOALS

GOAL
1

Achieve a continuous reduction of operational safety risks.

GOAL
2

Strengthen States' safety oversight capabilities.

GOAL
3

Implement effective State Safety Programmes.

GOAL
4

Increase collaboration at the regional level.

GOAL
5

Expand the use of industry programmes.

GOAL
6

Ensure the appropriate infrastructure is available to support safe operations.

SAFETY

GASP Study Group

✈ Conformed by 100 members, from 25 countries and 10 international organizations

GASP ROLES AND RESPONSIBILITIES

- ✈ The GASP provides a collaborative framework for States, regions and industry to support the management of organizational challenges and operational safety risks

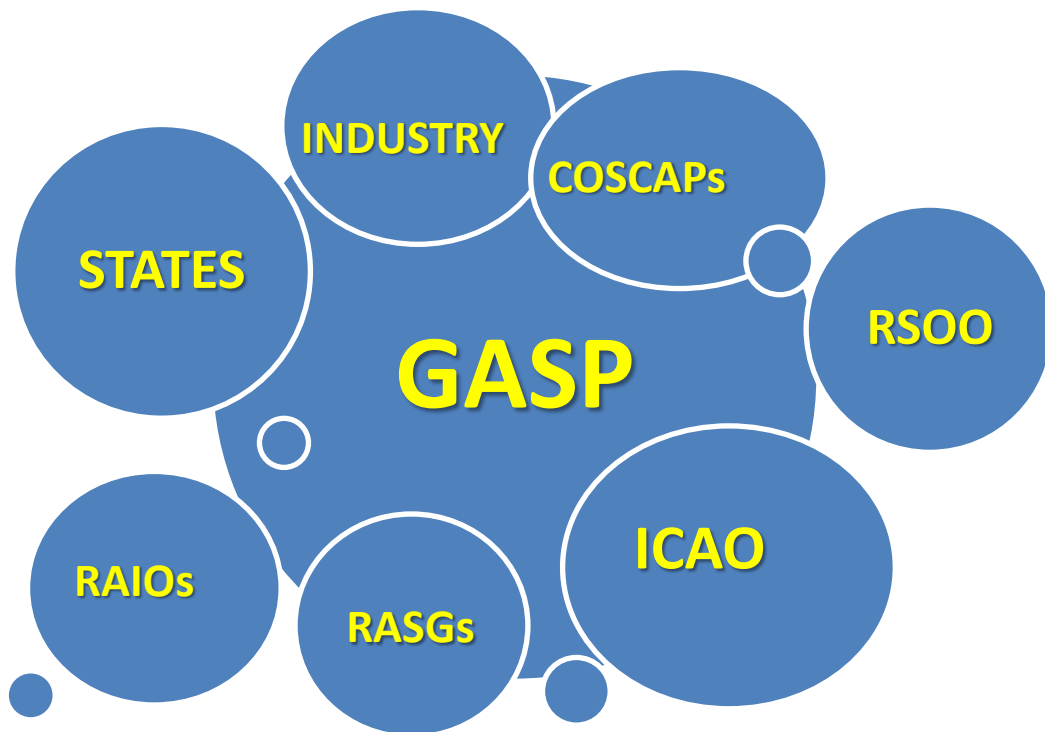

GASP Key Aviation Stakeholders

Stakeholders includes but not limited to:

ICAO, STATES, Industry, Regional Aviation Safety Groups (RASGs), Regional Accident and Incident Investigation Organizations (RAIOs), Cooperative Development of Operational Safety and Continuing Airworthiness Programmes (COSCAPs), Regional Safety Oversight Organizations (RSOOs).

STAKEHOLDERS — ROLES AND RESPONSIBILITIES UNDER THE GASP

- ✈ All aviation stakeholders need to be involved in the effort to continually improve safety. In addition to the development of SARPs, ICAO supports the implementation of the GASP by providing resources, implementation tools and assistance via different programmes and initiatives, such as the No Country Left Behind (NCLB) initiative. States that may be in a position to do so can also provide assistance to other States in achieving the GASP goals.

ICAO

SAFETY

THE ROLE OF ICAO

Promoting collaboration at global level to enhance safety

Coordinating activities of the RASGs to ensure they are aligned with the GASP

Ensuring close coordination between the RASGs and the PIRGs

Encouraging the active participation of the states and industry in the RASGs

Encouraging the active involvement of regional mechanisms, such as RSOOs, RAIOS and COSCAPs in RASGs activities

THE ROLE OF ICAO (cont.)

Implementing a global aviation safety oversight system (GASOS) with the goal of strengthening national and regional safety oversight capabilities, accident investigation and SSPs

Encouraging the states with effective oversight system to provide assistance to other States, where practicable.

**Providing data and tools to support the monitoring of GASP implementation
Facilitating the sharing and exchange of safety information and best practices across regions**

**Facilitating access to resources and technical assistance by States
Facilitating training and workshops**

ICAO

SAFETY

THE ROLE OF THE STATES

Addressing significant safety concerns (SSC) as priority

Acquiring the necessary expertise, either directly or through access to workshops, pools of expert, etc.

Developing and implementing a national aviation safety plan, taking into account the regional aviation safety plan and the GASP

Ensuring the effective implementation of the eight CEs of a State safety oversight system

ICAO

SAFETY

THE ROLE OF THE STATES

Building upon safety oversight systems to adopt a safety management approach under the SSP

Providing technical assistance to other States, where practicable

Participating actively in the activities of the RASGs

Sharing safety information with the RASGs and ICAO

Allocating resources to actively and continuously participate in the regional groups

THE ROLE OF THE REGIONS

- ✈ At the regional level, **RASGs** are the main drivers of the safety planning process. They are composed of States, regional entities and industry, among others. RASGs build on work already done by States and/or existing regional organizations such as the **COSCAPs** and **RSOOs**. They serve as regional cooperative fora integrating global, regional, national and industry efforts in continuing to enhance aviation safety worldwide.

ICAO

SAFETY

THE ROLE OF THE RASGs within the GASP

Supporting and monitoring progress towards the achievement of the GASP goals at the regional level

Developing and implementing a regional aviation safety plan consistent with the GASP and coordinating its implementation at the regional level

Structuring their work in line with the GASP to address organizational challenges, operational safety risk, emerging issues and safety performance management

Identifying safety risks and issues of priority, and encouraging States to initiate action using the roadmap

ICAO

SAFETY

THE ROLE OF THE RASGs within the GASP

Coordinating and tracking regional SEIs and GASP indicators

Monitoring regional safety performance indicators (SPIs) and identifying where action is needed

Providing technical assistance to State in their respective regions

Serving as the focal point to coordinate regional efforts and programmes related to the GASP aimed at mitigating operational safety risks

ICAO

SAFETY

SUPPORT ROLES OF THE RSOOs and RAIOS

As an integral part of the GASP, RASGs, together with RSOOs, coordinate all activities undertaken to address regional safety issues ensuring harmonization to the extent practicable. RSOOs play an important role by supporting the establishment and operation of safety oversight systems and analysing safety information at the regional level.

RAIOs facilitate the implementation of accident and incident investigation systems by allowing States to share the necessary financial and human resources, thus enabling them to meet their accident investigation obligations under the Convention on International Civil Aviation.

ICAO

SAFETY

ROLE OF THE INDUSTRY

Industry should engage in SMS implementation to continually identify hazards and address operational safety risks, as well as work collaboratively with ICAO, the regions and individual States on safety information exchange, safety monitoring and auditing programmes. Non-governmental organizations should work with their members to help them develop their SPIs and provide guidance material and training to assist with addressing HRCs and SMS implementation.

GASP GOALS, TARGETS AND INDICATORS

Goal 1:
Achieve a continuous reduction of operational safety risks

1.1 Target
Maintain a decreasing trend of global accident rate

INDICATORS

- Number of accidents
- Number of accidents per million departures (accident rate)
- Number of fatal accidents
- Number of fatal accidents per million departures (fatal accident Rate)
- Number of fatalities
- Number of fatalities per passengers carried (fatality rate)
- Percentage of occurrences related to high-risk categories (HRCs)

GASP GOALS TARGETS AND INDICATORS (cont.)

Goal 2: Strengthen States' safety oversight capabilities

Target 2.1
All states to improve their score for the EI of the State's Safety Oversight System

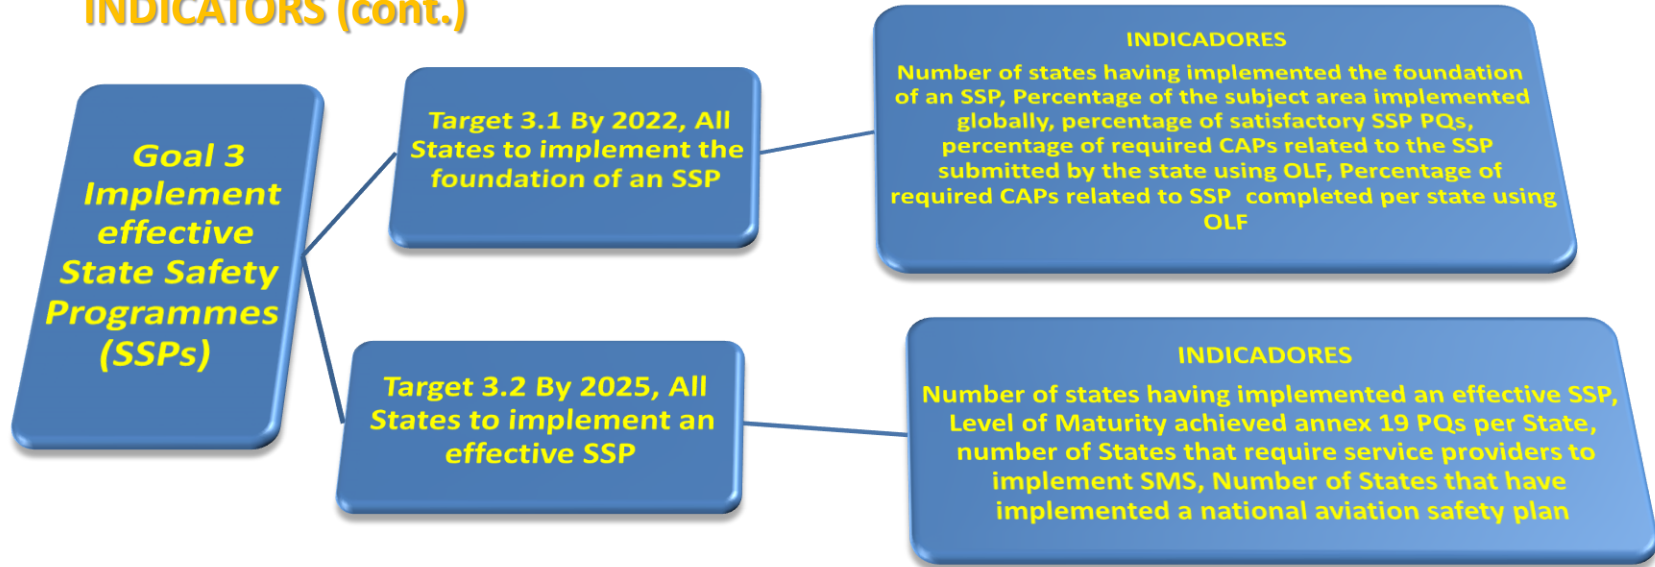

Indicators:
Overall global EI score, EI per State, number of States reaching the EI score as per timeline, number of states with fully implemented PQs related to Safety Oversight system, among others

Target 2.2
By 2022, all States to reach a safety oversight index greater than 1, in all categories

Indicators:

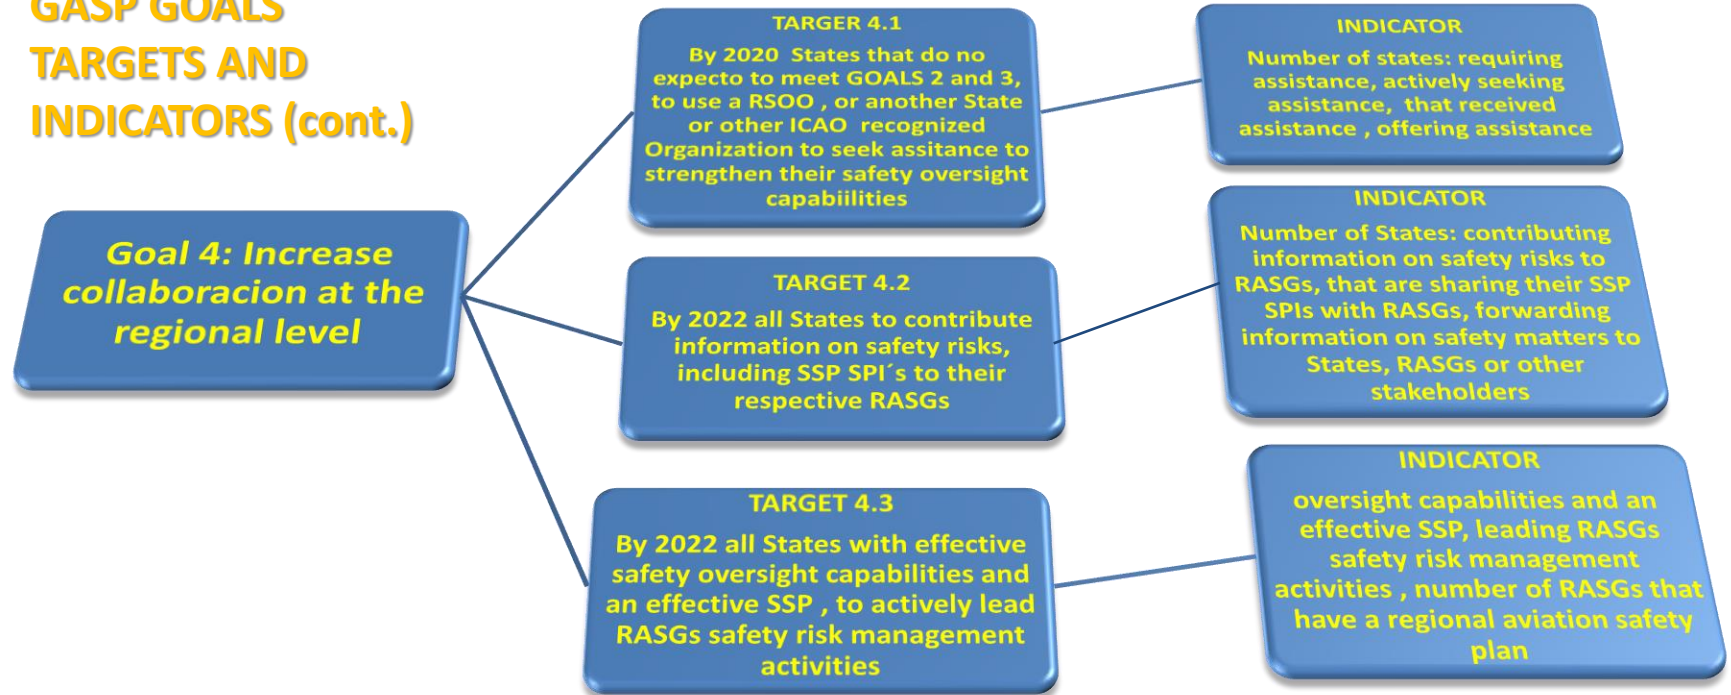

- Number of States maintaining a safety oversight index greater than 1 in all categories
- Percentage of States maintaining a safety oversight index greater than 1 in all categories
- Percentage of each category with a safety oversight index greater than 1 globally
- Safety oversight index per State, per category

GASP GOALS TARGETS AND INDICATORS (cont.)

ICAO

SAFETY

SAFETY PERFORMANCE MEASUREMENT

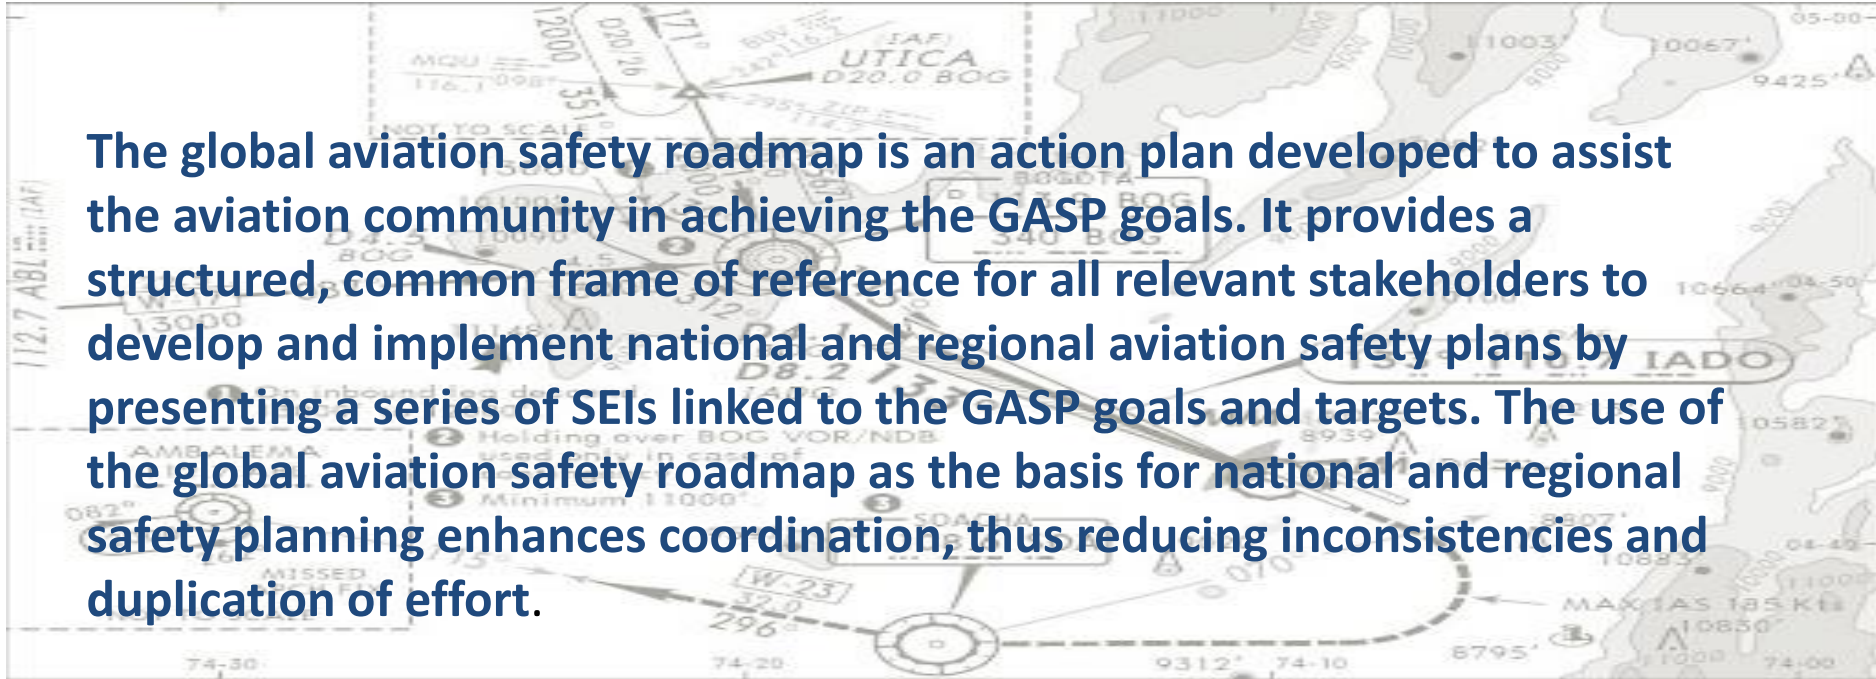

The safety performance of the GASP is measured by a series of metrics as defined by the GASP indicators. Elements used to measure safety performance related to the GASP include, but are not limited to:

- a) number of fatalities (as the main indicator);
- b) accident rate;
- c) fatal accident rate;
- d) priority PQs for a safety oversight system;
- e) safety oversight index;
- f) SSP foundational PQs; and
- g) PQs related to safety management.

GLOBAL AVIATION SAFETY ROADMAP

The global aviation safety roadmap is an action plan developed to assist the aviation community in achieving the GASP goals. It provides a structured, common frame of reference for all relevant stakeholders to develop and implement national and regional aviation safety plans by presenting a series of SEIs linked to the GASP goals and targets. The use of the global aviation safety roadmap as the basis for national and regional safety planning enhances coordination, thus reducing inconsistencies and duplication of effort.

Components of the Global Aviation Safety Roadmap

The global aviation safety roadmap is composed of two pieces:

a) organizational challenges — this part of the roadmap (referred to as the ORG roadmap) provides SEIs to meet GASP goals related to States' safety oversight capabilities and the implementation of SSPs, as well as industry's implementation of SMS, and contains two distinct components, in line with the GASP goals, to address safety management responsibilities:

- 1) State safety oversight system; and
- 2) SSP, including service providers' SMS
